Comprehensive MCQ Question Bank — with Answers & Explanations

Topic: Broad View of Operating Systems

MS-DOS | UNIX | MS-WINDOWS | Comparative Study

Total Questions: 503+

Format: Four-option MCQs with Question Number, Type, Topic, Correct Answer & Short Explanation

Section	Coverage	No. of Qs
MS-DOS	Definitions, Features, Commands, Architecture, Pros/Cons, Uses	110
UNIX	Definitions, Multiuser/Multitasking, Commands, Architecture, Pros/Cons, Uses	110
MS-WINDOWS	Definitions, GUI Concepts, Architecture, Pros/Cons, Uses	105
COMPARATIVE STUDY	MS-DOS vs UNIX, UNIX vs Windows, MS-DOS vs Windows, General	90
MIXED PRACTICE QUESTIONS	Cross-topic recall, scenarios, assertion-reason, true/false	88
TOTAL		**503**

This question bank is built strictly from the prescribed syllabus: a broad overview of MS-DOS, UNIX, and MS-WINDOWS - their features, characteristics, architecture, advantages, limitations, applications, and comparative study. Every question includes the correct answer plus a short explanation. No topics outside this syllabus are included.

110 Multiple-Choice Questions | Each question includes the correct answer and a short explanation

Definition & Conceptual

Q1 Definition MS-DOS

What does the abbreviation DOS stand for?

A. Disk Operating System

B. Data Operating System

C. Digital Operating System

D. Device Operating System

Ans: A Disk Operating System. This is a fundamental fact to remember about MS-DOS.

Q2 Definition MS-DOS

MS-DOS was developed and marketed by which company?

A. Apple

B. Microsoft

C. IBM

D. Sun Microsystems

Ans: B Microsoft. This is one of the basic identifying facts about MS-DOS.

Q3 Definition MS-DOS

MS-DOS was primarily designed for which type of computers?

A. Mainframe computers

B. IBM-compatible personal computers

C. Supercomputers

D. Mobile phones

Ans: B IBM-compatible personal computers. This is a standard definitional point covered under MS-DOS.

Q4 Definition **MS-DOS**

In which year was MS-DOS first released?

A. 1975

B. 1981

C. 1990

D. 1995

Ans: B 1981. Keep this as a core MS-DOS fact for the exam.

Q5 Definition **MS-DOS**

In terms of number of simultaneous users, MS-DOS is classified as a:

A. Multiuser OS

B. Single-user OS

C. Network OS

D. Distributed OS

Ans: B Single-user OS. This is a fundamental fact to remember about MS-DOS.

Q6 Definition **MS-DOS**

In terms of number of tasks it can run at one time, MS-DOS is classified as a:

A. Multitasking OS

B. Single-tasking OS

C. Time-sharing OS

D. Real-time OS

Ans: B Single-tasking OS. This is one of the basic identifying facts about MS-DOS.

Q7 Definition MS-DOS

The user interface provided by MS-DOS is called a:

A. Graphical User Interface

B. Command Line Interface

C. Touch Interface

D. Menu-driven Interface only

Ans: B Command Line Interface. This is a standard definitional point covered under MS-DOS.

Q8 Definition MS-DOS

MS-DOS was largely based on/influenced by which earlier operating system?

A. CP/M

B. UNIX

C. VMS

D. OS/2

Ans: A CP/M. Keep this as a core MS-DOS fact for the exam.

Q9 Definition MS-DOS

The original product that became the basis for MS-DOS (86-DOS/QDOS) was created by which company?

A. Microsoft

B. Seattle Computer Products

C. IBM

D. Digital Research

Ans: B Seattle Computer Products. This is a fundamental fact to remember about MS-DOS.

Q10 Definition **MS-DOS**

In terms of interface evolution, MS-DOS is best classified as a(n):

A. Text-based OS

B. Graphics-based OS

C. Voice-based OS

D. Touch-based OS

Ans: A Text-based OS. This is one of the basic identifying facts about MS-DOS.

Q11 Definition **MS-DOS**

PC-DOS, the IBM-branded version of MS-DOS, stands for:

A. Personal Computer Disk Operating System

B. Public Computer Data Operating System

C. Personal Central Disk Operating System

D. Primary Computer Disk Operating System

Ans: A Personal Computer Disk Operating System. This is a standard definitional point covered under MS-DOS.

Q12 Definition **MS-DOS**

Which file system is most closely associated with MS-DOS?

A. NTFS

B. FAT

C. ext2

D. HFS

Ans: B FAT. Keep this as a core MS-DOS fact for the exam.

Q13 Definition MS-DOS

In MS-DOS, the basic unit used to interact with the system is the:

A. Icon

B. Typed command

C. Window

D. Menu

Ans: B Typed command. This is a fundamental fact to remember about MS-DOS.

Q14 Definition MS-DOS

In terms of hardware dependency, MS-DOS is best described as:

A. Hardware-independent

B. Closely tied to IBM-compatible (16-bit) PC hardware

C. Cloud-based

D. Virtual machine based

Ans: B Closely tied to IBM-compatible (16-bit) PC hardware. This is one of the basic identifying facts about MS-DOS.

Q15 Definition MS-DOS

The default command prompt symbol displayed in MS-DOS (e.g., C:\>) ends with which character?

A. $

B. #

C. >

D. %

Ans: C >. This is a standard definitional point covered under MS-DOS.

Features & Characteristics

Q16 Feature **MS-DOS**

Which of the following is a key feature of MS-DOS?

A. Multiuser support

B. Single-user, single-tasking environment

C. Built-in virtualization

D. Automatic plug-and-play hardware detection

Ans: B Single-user, single-tasking environment. This is a key characteristic associated with MS-DOS.

Q17 Feature **MS-DOS**

In the traditional MS-DOS 8.3 naming convention, the file name part (before the dot) can have a maximum of how many characters?

A. 8 characters

B. 16 characters

C. 32 characters

D. 255 characters

Ans: A 8 characters. This is a defining feature of MS-DOS.

Q18 Feature **MS-DOS**

In the traditional MS-DOS 8.3 naming convention, the file extension can have a maximum of how many characters?

A. 2

B. 3

C. 4

D. 5

Ans: B 3. This characteristic is frequently tested for MS-DOS.

Q19 Feature **MS-DOS**

In terms of source code availability, MS-DOS is characterized as:

A. Open source

B. Proprietary/closed source

C. Freeware with source code

D. Public domain

Ans: B Proprietary/closed source. This trait helps distinguish MS-DOS from the other operating systems in this syllabus.

Q20 Feature **MS-DOS**

MS-DOS organizes files and directories using which structure?

A. A flat file system

B. A tree-structured (hierarchical) directory system

C. A distributed file system

D. A networked file system only

Ans: B A tree-structured (hierarchical) directory system. This is a key characteristic associated with MS-DOS.

Q21 Feature **MS-DOS**

MS-DOS commands are processed through which component?

A. Mouse clicks

B. A command interpreter (COMMAND.COM)

C. Touch gestures

D. Voice recognition

Ans: B A command interpreter (COMMAND.COM). This is a defining feature of MS-DOS.

Q22 Feature **MS-DOS**

Which statement best describes MS-DOS memory management?

A. It natively supports virtual memory with full paging

B. It is largely limited to conventional memory addressing (the 640 KB barrier)

C. It addresses unlimited RAM by default

D. It manages memory entirely through GUI tools

Ans: B It is largely limited to conventional memory addressing (the 640 KB barrier). This characteristic is frequently tested for MS-DOS.

Q23 Feature **MS-DOS**

Which of the following is MS-DOS generally NOT designed to support natively?

A. Batch file processing

B. Multitasking of multiple applications at once

C. Output redirection

D. Typed commands

Ans: B Multitasking of multiple applications at once. This trait helps distinguish MS-DOS from the other operating systems in this syllabus.

Q24 Feature **MS-DOS**

The core system files typically required to boot MS-DOS include:

A. IO.SYS, MSDOS.SYS, COMMAND.COM

B. KERNEL32.DLL, NTOSKRNL.EXE

C. vmlinuz, init

D. BOOTMGR only

Ans: A IO.SYS, MSDOS.SYS, COMMAND.COM. This is a key characteristic associated with MS-DOS.

Q25 Feature **MS-DOS**

Which symbol is used in MS-DOS to redirect command output to a file?

A. <

B. >

C. |

D. &

Ans: B >. This is a defining feature of MS-DOS.

Q26 Feature **MS-DOS**

Which symbol in MS-DOS is used to pipe the output of one command as input to another?

A. >

B. <

C. |

D. ;

Ans: C |. This characteristic is frequently tested for MS-DOS.

Q27 Feature **MS-DOS**

Batch files in MS-DOS use which file extension?

A. .exe

B. .bat

C. .sys

D. .com

Ans: B .bat. This trait helps distinguish MS-DOS from the other operating systems in this syllabus.

Q28 Feature **MS-DOS**

MS-DOS commands are broadly categorized into internal and external commands based mainly on:

A. Speed of execution

B. Whether they are built into COMMAND.COM or stored as separate program files

C. File size

D. User permission level

Ans: B Whether they are built into COMMAND.COM or stored as separate program files. This is a key characteristic associated with MS-DOS.

Q29 Feature **MS-DOS**

Which of these is an example of an internal MS-DOS command?

A. FORMAT

B. DIR

C. XCOPY

D. CHKDSK

Ans: B DIR. This is a defining feature of MS-DOS.

Q30 Feature **MS-DOS**

Which of these is an example of an external MS-DOS command?

A. DIR

B. CD

C. FORMAT

D. CLS

Ans: C FORMAT. This characteristic is frequently tested for MS-DOS.

Commands & Interface

Q31 Command MS-DOS

Which MS-DOS command displays a list of files and directories?

A. LIST

B. DIR

C. SHOW

D. FILES

Ans: B DIR. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q32 Command MS-DOS

Which command is used to copy files in MS-DOS?

A. COPY

B. MOVE

C. CLONE

D. DUP

Ans: A COPY. The remaining choices are not genuine MS-DOS commands or components.

Q33 Command MS-DOS

Which command deletes a file in MS-DOS?

A. ERASE/DEL

B. REMOVE

C. CLEAR

D. CUT

Ans: A ERASE/DEL. This is the standard MS-DOS command tested in this syllabus.

Q34 Command **MS-DOS**

Which command renames a file in MS-DOS?

A. MOVE

B. REN

C. NAME

D. CHANGE

Ans: B REN. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q35 Command **MS-DOS**

Which command creates a new directory in MS-DOS?

A. MD/MKDIR

B. NEWDIR

C. CREATE

D. MAKE

Ans: A MD/MKDIR. The remaining choices are not genuine MS-DOS commands or components.

Q36 Command **MS-DOS**

Which command removes an empty directory in MS-DOS?

A. DELDIR

B. RD/RMDIR

C. ERASEDIR

D. CUTDIR

Ans: B RD/RMDIR. This is the standard MS-DOS command tested in this syllabus.

Q37 Command **MS-DOS**

Which command is used to change the current directory in MS-DOS?

A. CD

B. GOTO

C. MOVE

D. SWITCH

Ans: A CD. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q38 Command **MS-DOS**

Which command clears the screen in MS-DOS?

A. CLEAR

B. CLS

C. WIPE

D. ERASE

Ans: B CLS. The remaining choices are not genuine MS-DOS commands or components.

Q39 Command **MS-DOS**

Which command is used to format a disk in MS-DOS?

A. FORMAT

B. PREPARE

C. INIT

D. SETUP

Ans: A FORMAT. This is the standard MS-DOS command tested in this syllabus.

Q40 Command **MS-DOS**

Which command checks a disk for errors in MS-DOS?

A. CHKDSK

B. DISKCHECK

C. SCANDISK only

D. VERIFY

Ans: A CHKDSK. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q41 Command **MS-DOS**

Which command displays or sets file attributes in MS-DOS?

A. ATTRIB

B. PROPS

C. FILEINFO

D. SETATTR

Ans: A ATTRIB. The remaining choices are not genuine MS-DOS commands or components.

Q42 Command **MS-DOS**

Which command copies entire directory structures, including subdirectories?

A. COPY

B. XCOPY

C. DUPLICATE

D. MIRROR

Ans: B XCOPY. This is the standard MS-DOS command tested in this syllabus.

Q43 Command **MS-DOS**

Which command displays the contents of a text file in MS-DOS?

A. SHOW

B. TYPE

C. PRINT

D. VIEW

Ans: B TYPE. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q44 Command **MS-DOS**

Which command displays the MS-DOS version?

A. VERSION

B. VER

C. INFO

D. ABOUT

Ans: B VER. The remaining choices are not genuine MS-DOS commands or components.

Q45 Command **MS-DOS**

Which command displays the disk volume label?

A. VOL

B. LABELINFO

C. DISKNAME

D. NAME

Ans: A VOL. This is the standard MS-DOS command tested in this syllabus.

Q46 Command **MS-DOS**

Which command displays the directory structure in a tree-like format?

A. TREE

B. MAP

C. STRUCT

D. HIERARCHY

Ans: A TREE. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q47 Command **MS-DOS**

Which command is used to set or display the system date?

A. DATE

B. CALENDAR

C. TODAY

D. SETDATE

Ans: A DATE. The remaining choices are not genuine MS-DOS commands or components.

Q48 Command **MS-DOS**

Which command is used to set or display the system time?

A. TIME

B. CLOCK

C. SETTIME

D. HOUR

Ans: A TIME. This is the standard MS-DOS command tested in this syllabus.

Q49 Command **MS-DOS**

Which command searches for a specific text string within files?

A. FIND

B. SEARCH

C. LOCATE

D. GREP

Ans: A FIND. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q50 Command **MS-DOS**

Which command sorts the contents of a file or command output?

A. ORDER

B. SORT

C. ARRANGE

D. SEQ

Ans: B SORT. The remaining choices are not genuine MS-DOS commands or components.

Q51 Command **MS-DOS**

Which command displays output one screen at a time?

A. PAGE

B. MORE

C. SCROLL

D. PAUSE

Ans: B MORE. This is the standard MS-DOS command tested in this syllabus.

Q52 Command **MS-DOS**

Which command sets the search path for executable files?

A. PATH

B. SETPATH

C. DIRPATH

D. LOCATE

Ans: A PATH. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q53 Command **MS-DOS**

Which command displays or changes the appearance of the command prompt?

A. PROMPT

B. DISPLAY

C. SETPROMPT

D. SHELL

Ans: A PROMPT. The remaining choices are not genuine MS-DOS commands or components.

Q54 Command **MS-DOS**

Which command, used within batch files, displays messages or toggles command echoing?

A. ECHO

B. PRINT

C. MSG

D. SHOW

Ans: A ECHO. This is the standard MS-DOS command tested in this syllabus.

Q55 Command **MS-DOS**

Which command exits the MS-DOS command interpreter?

A. QUIT

B. EXIT

C. CLOSE

D. END

Ans: B EXIT. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q56 Command **MS-DOS**

Which command compares the contents of two floppy disks?

A. DISKCOMP

B. COMPARE

C. DISKCHECK

D. VERIFY

Ans: A DISKCOMP. The remaining choices are not genuine MS-DOS commands or components.

Q57 Command **MS-DOS**

Which command duplicates an entire floppy disk?

A. DISKCOPY

B. COPYDISK

C. CLONE

D. XCOPY

Ans: A DISKCOPY. This is the standard MS-DOS command tested in this syllabus.

Q58 Command **MS-DOS**

Which command is used to partition a hard disk in MS-DOS?

A. FDISK

B. PARTITION

C. DISKPART

D. SETUPDISK

Ans: A FDISK. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q59 Command **MS-DOS**

Which command displays the amount of used and free system memory?

A. MEM

B. MEMORY

C. RAMINFO

D. FREE

Ans: A MEM. The remaining choices are not genuine MS-DOS commands or components.

Q60 Command **MS-DOS**

Which legacy MS-DOS command-line tool is used to create or edit text files?

A. EDIT

B. NOTEPAD

C. WRITE

D. WORDPAD

Ans: A EDIT. This is the standard MS-DOS command tested in this syllabus.

Q61 Command **MS-DOS**

Which command copies the system files needed to boot from a disk?

A. SYS

B. BOOT

C. SYSCOPY

D. STARTUP

Ans: A SYS. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q62 Command **MS-DOS**

Which command backs up files from a hard disk to floppy disks in MS-DOS?

A. BACKUP

B. ARCHIVE

C. SAVE

D. STORE

Ans: A BACKUP. The remaining choices are not genuine MS-DOS commands or components.

Q63 Command **MS-DOS**

Which command restores files that were previously backed up using BACKUP?

A. RESTORE

B. RECOVER

C. RETRIEVE

D. UNDO

Ans: A RESTORE. This is the standard MS-DOS command tested in this syllabus.

Q64 Command **MS-DOS**

Which is a low-level debugging and machine-code utility found in MS-DOS?

A. DEBUG

B. TRACE

C. MONITOR

D. INSPECT

Ans: A DEBUG. This is the correct MS-DOS term for this purpose; the other options are not valid MS-DOS commands.

Q65 Command **MS-DOS**

Which wildcard character represents multiple unknown characters in an MS-DOS file name?

A. ?

B. *

C. #

D. %

Ans: B *. The remaining choices are not genuine MS-DOS commands or components.

Q66 Command **MS-DOS**

Which wildcard character represents a single unknown character in an MS-DOS file name?

A. *

B. ?

C. !

D. &

Ans: B ? This is the standard MS-DOS command tested in this syllabus.

Architecture & Working

Q67 Architecture MS-DOS

The overall architecture of MS-DOS is generally described as a:

A. Layered, single-user, command-driven design

B. Microkernel architecture

C. Client-server architecture

D. Distributed architecture

Ans: A Layered, single-user, command-driven design. This reflects how MS-DOS's internal architecture is organized.

Q68 Architecture MS-DOS

Which component of MS-DOS acts as the command interpreter (shell)?

A. IO.SYS

B. COMMAND.COM

C. MSDOS.SYS

D. KERNEL.SYS

Ans: B COMMAND.COM. This is part of the standard architectural description of MS-DOS.

Q69 Architecture MS-DOS

Which MS-DOS system file handles low-level hardware input/output routines?

A. IO.SYS

B. COMMAND.COM

C. AUTOEXEC.BAT

D. CONFIG.SYS

Ans: A IO.SYS. This is a key architectural fact about MS-DOS.

Q70 Architecture **MS-DOS**

Which file contains device driver and system configuration settings loaded at boot time?

A. AUTOEXEC.BAT

B. CONFIG.SYS

C. COMMAND.COM

D. BOOT.INI

Ans: B CONFIG.SYS. This reflects how MS-DOS's internal architecture is organized.

Q71 Architecture **MS-DOS**

Which file automatically executes a set of commands every time MS-DOS boots up?

A. CONFIG.SYS

B. AUTOEXEC.BAT

C. STARTUP.BAT

D. BOOT.SYS

Ans: B AUTOEXEC.BAT. This is part of the standard architectural description of MS-DOS.

Q72 Architecture **MS-DOS**

The maximum amount of conventional memory directly addressable by standard MS-DOS is:

A. 256 KB

B. 640 KB

C. 1 MB

D. 4 GB

Ans: B 640 KB. This is a key architectural fact about MS-DOS.

Q73 Architecture MS-DOS

MS-DOS processes user commands while the processor runs in which mode?

A. Protected mode

B. Real mode

C. Virtual mode

D. Kernel-only mode

Ans: B Real mode. This reflects how MS-DOS's internal architecture is organized.

Q74 Architecture MS-DOS

In MS-DOS terminology, "booting" refers to:

A. Shutting down the system

B. The process of loading the operating system into memory

C. Installing application software

D. Formatting the disk

Ans: B The process of loading the operating system into memory. This is part of the standard architectural description of MS-DOS.

Q75 Architecture MS-DOS

Which part of MS-DOS architecture directly interacts with BIOS routines?

A. COMMAND.COM

B. IO.SYS

C. AUTOEXEC.BAT

D. CONFIG.SYS

Ans: B IO.SYS. This is a key architectural fact about MS-DOS.

Q76 Architecture MS-DOS

Device drivers are typically loaded in MS-DOS through which directive in CONFIG.SYS?

A. LOAD=

B. DEVICE=

C. DRIVER=

D. INSTALL= only

Ans: B DEVICE=. This reflects how MS-DOS's internal architecture is organized.

Advantages & Limitations

Q77 Pros & Cons MS-DOS

Which of the following is an advantage of MS-DOS?

A. Requires very little system memory and few hardware resources

B. Provides advanced multitasking

C. Has built-in networking support

D. Provides a rich graphical interface

Ans: A Requires very little system memory and few hardware resources. This is commonly cited when comparing the advantages and limitations of MS-DOS.

Q78 Pros & Cons MS-DOS

Which of the following is a limitation of MS-DOS?

A. It natively supports very large modern hard disks

B. It does not support multitasking or multiuser operation

C. It has a graphical interface

D. It supports long file names natively

Ans: B It does not support multitasking or multiuser operation. This is a frequently tested advantage/limitation of MS-DOS.

Q79 Pros & Cons MS-DOS

MS-DOS is considered advantageous on old or low-end hardware mainly because:

A. It requires minimal system resources

B. It needs a powerful GPU

C. It needs large amounts of RAM

D. It needs constant network connectivity

Ans: A It requires minimal system resources. This is a well-known point raised when discussing MS-DOS's strengths and weaknesses.

Q80 Pros & Cons MS-DOS

A major limitation of MS-DOS compared with modern operating systems is:

A. Lack of GUI and limited hardware support

B. Too much GUI customization

C. Excessive multitasking overhead

D. Built-in cloud storage

Ans: A Lack of GUI and limited hardware support. This is commonly cited when comparing the advantages and limitations of MS-DOS.

Q81 Pros & Cons MS-DOS

MS-DOS's single-tasking nature means that:

A. Multiple users can log in simultaneously

B. Only one program can run at a time

C. Multiple programs run in parallel

D. It supports background services by default

Ans: B Only one program can run at a time. This is a frequently tested advantage/limitation of MS-DOS.

Q82 Pros & Cons MS-DOS

A limitation of the 8.3 file naming convention used in MS-DOS is that:

A. File names can be very descriptive

B. File names are restricted in length, limiting descriptiveness

C. It allows unlimited-length file names

D. It supports spaces freely in file names

Ans: B File names are restricted in length, limiting descriptiveness. This is a well-known point raised when discussing MS-DOS's strengths and weaknesses.

Q83 Pros & Cons MS-DOS

MS-DOS, in its base form, lacks built-in support for:

A. Typed commands

B. Modern networking and internet protocols

C. Batch processing

D. File copying

Ans: B Modern networking and internet protocols. This is commonly cited when comparing the advantages and limitations of MS-DOS.

Q84 Pros & Cons MS-DOS

MS-DOS is considered fast for simple tasks on old hardware mainly because:

A. It has minimal overhead and a lightweight, command-driven design

B. It runs only on supercomputers

C. It uses heavy GUI rendering

D. It requires a constant internet connection

Ans: A It has minimal overhead and a lightweight, command-driven design. This is a frequently tested advantage/limitation of MS-DOS.

Q85 Pros & Cons MS-DOS

Which of the following is NOT generally considered an advantage of MS-DOS?

A. Simplicity

B. Low resource requirement

C. Multiuser capability

D. Reasonable stability for simple tasks

Ans: C Multiuser capability. This is a well-known point raised when discussing MS-DOS's strengths and weaknesses.

Q86 Pros & Cons MS-DOS

A key drawback of MS-DOS's command-line-only interface is that:

A. It is effortless for beginners with no training

B. It requires users to memorize commands, increasing the learning difficulty

C. It eliminates the need for typing entirely

D. It is entirely menu-driven

Ans: B It requires users to memorize commands, increasing the learning difficulty. This is commonly cited when comparing the advantages and limitations of MS-DOS.

Q87 Pros & Cons MS-DOS

MS-DOS's lack of memory protection between programs means that:

A. Programs can potentially interfere with each other's memory space

B. Each program automatically gets isolated virtual memory

C. System crashes never occur

D. Multiple users are always safely isolated

Ans: A Programs can potentially interfere with each other's memory space. This is a frequently tested advantage/limitation of MS-DOS.

Q88 Pros & Cons MS-DOS

Despite its limitations, MS-DOS remains useful today mainly for:

A. Modern 3D gaming

B. Legacy system support, embedded systems, and educational purposes

C. Cloud computing platforms

D. Social media applications

Ans: B Legacy system support, embedded systems, and educational purposes. This is a well-known point raised when discussing MS-DOS's strengths and weaknesses.

Applications & Uses

Q89 Application MS-DOS

MS-DOS was historically widely used for:

A. Personal computing on IBM-compatible PCs in the 1980s-1990s

B. Supercomputing clusters

C. Smartphone operating systems

D. Web servers exclusively

Ans: A Personal computing on IBM-compatible PCs in the 1980s-1990s. This is a commonly cited practical application of MS-DOS.

Q90 Application MS-DOS

MS-DOS is still occasionally used today in which area?

A. Embedded systems and legacy industrial equipment

B. Modern smartphones

C. Cloud-native applications

D. Virtual reality systems

Ans: A Embedded systems and legacy industrial equipment. This reflects how MS-DOS is actually used in practice.

Q91 Application **MS-DOS**

Batch files in MS-DOS are commonly used for:

A. Automating repetitive sequences of commands

B. Designing 3D graphics

C. Streaming video

D. Managing multiuser logins

Ans: A Automating repetitive sequences of commands. This is a typical real-world use case for MS-DOS.

Q92 Application **MS-DOS**

MS-DOS served as the underlying platform for which early Microsoft graphical product?

A. Early versions of MS-Windows (e.g., Windows 3.x)

B. UNIX System V

C. macOS

D. Android

Ans: A Early versions of MS-Windows (e.g., Windows 3.x). This is a commonly cited practical application of MS-DOS.

Q93 Application **MS-DOS**

In education, MS-DOS is sometimes taught to help students understand:

A. Touchscreen technology

B. Fundamental command-line and file system concepts

C. Cloud storage management

D. Social media marketing

Ans: B Fundamental command-line and file system concepts. This reflects how MS-DOS is actually used in practice.

Q94 Application **MS-DOS**

MS-DOS-based systems were commonly used in early:

A. ATMs and point-of-sale systems

B. Smartwatches

C. Virtual reality headsets

D. Cloud servers

Ans: A ATMs and point-of-sale systems. This is a typical real-world use case for MS-DOS.

Q95 Application **MS-DOS**

Which application type heavily relied on MS-DOS in offices during the 1980s-1990s?

A. Word processors and spreadsheet programs (e.g., WordStar, Lotus 1-2-3)

B. Web browsers

C. Video conferencing tools

D. Social networking apps

Ans: A Word processors and spreadsheet programs (e.g., WordStar, Lotus 1-2-3). This is a commonly cited practical application of MS-DOS.

Q96 Application **MS-DOS**

MS-DOS-based PC gaming during the late 1980s-1990s was significant because:

A. Many classic PC games were developed to run directly on MS-DOS

B. MS-DOS supported only console games

C. MS-DOS had a built-in 3D engine

D. MS-DOS games required internet access

Ans: A Many classic PC games were developed to run directly on MS-DOS. This reflects how MS-DOS is actually used in practice.

Assertion-Reason

Q97 Assertion-Reason MS-DOS

Assertion (A): MS-DOS is a single-user operating system. Reason (R): MS-DOS does not provide facilities for multiple users to log in and work simultaneously.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q98 Assertion-Reason MS-DOS

Assertion (A): MS-DOS uses a command-line interface. Reason (R): Users must type text commands to interact with MS-DOS instead of clicking icons.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q99 Assertion-Reason MS-DOS

Assertion (A): MS-DOS cannot run multiple applications at the same time. Reason (R): MS-DOS is a single-tasking operating system.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q100 Assertion-Reason MS-DOS

Assertion (A): COMMAND.COM is an essential file for MS-DOS. Reason (R): COMMAND.COM acts as the command interpreter for MS-DOS.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q101 Assertion-Reason MS-DOS

Assertion (A): MS-DOS files can have very long, descriptive names by default. Reason (R): MS-DOS follows the 8.3 file naming convention.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: D A is false, but R is true. The assertion is incorrect, while the reason on its own is a true statement.

Q102 Assertion-Reason MS-DOS

Assertion (A): MS-DOS does not require a powerful computer to run. Reason (R): MS-DOS has minimal hardware and memory requirements.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

True/False (MCQ Format)

Q103 True/False MS-DOS

Which statement about MS-DOS is TRUE?

A. MS-DOS supports a graphical user interface by default

B. MS-DOS is a single-user, single-tasking OS

C. MS-DOS supports multiple simultaneous users

D. MS-DOS was developed by Apple

Ans: B MS-DOS is a single-user, single-tasking OS. This statement is factually accurate; the other options each contain an error about MS-DOS.

Q104 True/False MS-DOS

Which statement about MS-DOS is FALSE?

A. MS-DOS uses a command-line interface

B. MS-DOS was developed by Microsoft

C. MS-DOS supports true multitasking of multiple applications

D. MS-DOS uses COMMAND.COM as its shell

Ans: C MS-DOS supports true multitasking of multiple applications. This statement is incorrect as written, making it the answer here; the remaining options are true statements about MS-DOS.

Q105 True/False MS-DOS

Identify the TRUE statement regarding MS-DOS file names.

A. File names can exceed 255 characters by default

B. File names follow the 8.3 naming convention

C. File names can contain spaces freely

D. File extensions can have unlimited characters

Ans: B File names follow the 8.3 naming convention. This statement is factually accurate; the other options each contain an error about MS-DOS.

Q106 True/False MS-DOS

Identify the FALSE statement regarding MS-DOS.

A. DIR lists files and directories

B. FORMAT prepares a disk for use

C. MS-DOS natively supports modern networking out of the box

D. COPY duplicates files

Ans: C MS-DOS natively supports modern networking out of the box. This statement is incorrect as written, making it the answer here; the remaining options are true statements about MS-DOS.

Q107 True/False MS-DOS

Which statement about MS-DOS booting is TRUE?

A. AUTOEXEC.BAT runs before IO.SYS loads

B. IO.SYS and MSDOS.SYS are loaded before COMMAND.COM during boot

C. MS-DOS does not require any system files to boot

D. CONFIG.SYS is irrelevant to booting

Ans: B IO.SYS and MSDOS.SYS are loaded before COMMAND.COM during boot. This statement is factually accurate; the other options each contain an error about MS-DOS.

Q108 True/False MS-DOS

Which statement about MS-DOS commands is FALSE?

A. DIR is an internal command

B. FORMAT is an external command

C. CLS is an external command

D. CD is an internal command

Ans: C CLS is an external command. This statement is incorrect as written, making it the answer here; the remaining options are true statements about MS-DOS.

Match the Following

Q109 Match **MS-DOS**

Match the MS-DOS command with its function: (1) DIR (2) DEL (3) REN (4) MD -- (a) Rename file (b) Create directory (c) List files (d) Delete file

A. 1-c, 2-d, 3-a, 4-b

B. 1-a, 2-b, 3-c, 4-d

C. 1-d, 2-c, 3-b, 4-a

D. 1-b, 2-a, 3-d, 4-c

Ans: A These pairings correctly match each item with its role under MS-DOS.

Q110 Match **MS-DOS**

Match: (1) COMMAND.COM (2) IO.SYS (3) CONFIG.SYS (4) AUTOEXEC.BAT -- (a) Hardware I/O routines (b) Command interpreter (c) Startup commands (d) System/device configuration

A. 1-b, 2-a, 3-d, 4-c

B. 1-a, 2-b, 3-c, 4-d

C. 1-c, 2-d, 3-a, 4-b

D. 1-d, 2-c, 3-b, 4-a

Ans: A Each pair here correctly links the term with its function in MS-DOS.

Section 2: UNIX

110 Multiple-Choice Questions | Each question includes the correct answer and a short explanation

Definition & Conceptual

Q111 Definition **UNIX**

UNIX was originally developed at which organization?

A. Microsoft

B. Bell Labs (AT&T)

C. IBM

D. Apple

Ans: B Bell Labs (AT&T). This is a fundamental fact to remember about UNIX.

Q112 Definition **UNIX**

UNIX was originally developed during which period?

A. 1950s

B. Late 1960s-1970s

C. 1980s

D. 1990s

Ans: B Late 1960s-1970s. This is one of the basic identifying facts about UNIX.

Q113 Definition **UNIX**

UNIX was primarily rewritten and developed using which programming language?

A. Java

B. C

C. Python

D. Assembly only

Ans: B C. This is a standard definitional point covered under UNIX.

Q114 Definition UNIX

Who are commonly credited as the original developers of UNIX?

A. Bill Gates and Paul Allen

B. Ken Thompson and Dennis Ritchie

C. Steve Jobs and Steve Wozniak

D. Linus Torvalds and Richard Stallman

Ans: B Ken Thompson and Dennis Ritchie. Keep this as a core UNIX fact for the exam.

Q115 Definition UNIX

In terms of number of users, UNIX is classified as a:

A. Single-user OS

B. Multiuser OS

C. No-user OS

D. Limited dual-user OS

Ans: B Multiuser OS. This is a fundamental fact to remember about UNIX.

Q116 Definition UNIX

In terms of task handling, UNIX is classified as a:

A. Single-tasking OS

B. Multitasking OS

C. No-tasking OS

D. Batch-only OS

Ans: B Multitasking OS. This is one of the basic identifying facts about UNIX.

Q117 Definition UNIX

UNIX was originally designed mainly for use on which type of systems?

A. Mainframes and minicomputers

B. Smartphones

C. Embedded microcontrollers only

D. Graphic calculators

Ans: A Mainframes and minicomputers. This is a standard definitional point covered under UNIX.

Q118 Definition UNIX

UNIX is often described as a "portable" operating system mainly because:

A. It can only run on one specific hardware platform

B. It was written largely in a high-level language (C), allowing it to be adapted to multiple hardware platforms

C. It is a mobile phone OS

D. It cannot be modified

Ans: B It was written largely in a high-level language (C), allowing it to be adapted to multiple hardware platforms. Keep this as a core UNIX fact for the exam.

Q119 Definition UNIX

UNIX served as the foundation/inspiration for which widely known open-source operating system?

A. Linux

B. MS-DOS

C. Windows

D. CP/M

Ans: A Linux. This is a fundamental fact to remember about UNIX.

Q120 Definition UNIX

The traditional UNIX design philosophy emphasizes which principle?

A. Large monolithic programs that do everything

B. Small, simple tools that each do one task well and can be combined

C. Avoiding the command line entirely

D. Single-user-only design

Ans: B Small, simple tools that each do one task well and can be combined. This is one of the basic identifying facts about UNIX.

Q121 Definition UNIX

In terms of licensing history, UNIX is best described as:

A. Always completely free and open-source from inception

B. Originally proprietary, with various commercial and later open-source variants emerging

C. Public domain since its very first release

D. Never licensed to any external company

Ans: B Originally proprietary, with various commercial and later open-source variants emerging. This is a standard definitional point covered under UNIX.

Q122 Definition UNIX

UNIX file systems typically organize all files starting from which top-level directory?

A. C:\

B. / (root)

C. Home:

D. System:

Ans: B / (root). Keep this as a core UNIX fact for the exam.

Q123 Definition UNIX

In UNIX, most system resources, including devices, are conceptually treated as:

A. Registry entries

B. Files

C. Icons

D. Network packets only

Ans: B Files. This is a fundamental fact to remember about UNIX.

Q124 Definition UNIX

The traditional UNIX kernel is best described as following which architecture style?

A. Monolithic kernel

B. Pure microkernel only

C. Exokernel

D. No kernel concept at all

Ans: A Monolithic kernel. This is one of the basic identifying facts about UNIX.

Q125 Definition UNIX

Which modern desktop operating system has roots in Unix-like (BSD/Darwin) heritage?

A. macOS

B. MS-DOS

C. Windows 95

D. CP/M

Ans: A MacOS. This is a standard definitional point covered under UNIX.

Features, Multiuser & Multitasking

Q126 Feature UNIX

Which feature allows multiple users to access a UNIX system at the same time?

A. Multiuser capability

B. Single sign-on only

C. Batch processing only

D. Local-only access

Ans: A Multiuser capability. This is a key characteristic associated with UNIX.

Q127 Feature UNIX

Multitasking in UNIX refers to the operating system's ability to:

A. Run only one process at a time

B. Execute multiple processes seemingly simultaneously

C. Support only a single user

D. Avoid using system memory

Ans: B Execute multiple processes seemingly simultaneously. This is a defining feature of UNIX.

Q128 Feature UNIX

UNIX achieves multiuser functionality mainly through:

A. User accounts, permissions, and time-sharing

B. A single login terminal only

C. Disabling all security checks

D. Removing the file system

Ans: A User accounts, permissions, and time-sharing. This characteristic is frequently tested for UNIX.

Q129 Feature **UNIX**

Which UNIX feature ensures that each file/directory has defined access rights for owner, group, and others?

A. File permission system

B. Single shared access

C. No access control

D. Manual password sharing

Ans: A File permission system. This trait helps distinguish UNIX from the other operating systems in this syllabus.

Q130 Feature **UNIX**

The three basic types of file permissions in UNIX are:

A. Read, Write, Execute

B. Open, Close, Save

C. View, Edit, Delete

D. Lock, Unlock, Share

Ans: A Read, Write, Execute. This is a key characteristic associated with UNIX.

Q131 Feature **UNIX**

In UNIX, the command-line interpreter that processes user commands is called the:

A. Kernel

B. Shell

C. Terminal Driver

D. Daemon

Ans: B Shell. This is a defining feature of UNIX.

Q132 Feature UNIX

Which of the following is a well-known UNIX shell?

A. Bourne Shell (sh)

B. PowerShell only

C. COMMAND.COM

D. Registry Shell

Ans: A Bourne Shell (sh). This characteristic is frequently tested for UNIX.

Q133 Feature UNIX

UNIX allows a task to be run in the background using which operator?

A. &

B. @

C. #

D. %

Ans: A &. This trait helps distinguish UNIX from the other operating systems in this syllabus.

Q134 Feature UNIX

A "daemon" in UNIX refers to:

A. A type of virus

B. A background process that performs system tasks

C. A type of file extension

D. A hardware component

Ans: B A background process that performs system tasks. This is a key characteristic associated with UNIX.

Q135 Feature UNIX

UNIX uses which mechanism to allow the output of one command to become the input of another?

A. Pipes

B. Windows

C. Icons

D. Menus

Ans: A Pipes. This is a defining feature of UNIX.

Q136 Feature UNIX

Which symbol is used in UNIX to redirect command output to a file?

A. |

B. >

C. &

D. ~

Ans: B >. This characteristic is frequently tested for UNIX.

Q137 Feature UNIX

Which UNIX feature allows hierarchical organization of files in a tree-like structure?

A. Flat file system

B. Hierarchical file system

C. Distributed-only file system

D. No directory support

Ans: B Hierarchical file system. This trait helps distinguish UNIX from the other operating systems in this syllabus.

Q138 Feature **UNIX**

UNIX's case sensitivity means that:

A. "File.txt" and "file.txt" are treated as the same file

B. "File.txt" and "file.txt" are treated as two different files

C. UNIX ignores file name casing entirely

D. Only uppercase file names are allowed

Ans: B "File.txt" and "file.txt" are treated as two different files. This is a key characteristic associated with UNIX.

Q139 Feature **UNIX**

A UNIX process identifier is commonly referred to as a:

A. PID

B. FID

C. UID only

D. TID

Ans: A PID. This is a defining feature of UNIX.

Q140 Feature **UNIX**

UNIX uses which scheduling concept to give multiple users fair access to CPU time?

A. Time-sharing

B. A single queue only

C. No scheduling at all

D. Manual allocation by the user

Ans: A Time-sharing. This characteristic is frequently tested for UNIX.

Q141 Feature **UNIX**

Which command in UNIX displays currently running processes?

A. ps

B. show

C. list

D. tasks

Ans: A ps. This trait helps distinguish UNIX from the other operating systems in this syllabus.

Q142 Feature **UNIX**

Which UNIX command is used to terminate a running process?

A. kill

B. stop

C. end

D. terminate

Ans: A kill. This is a key characteristic associated with UNIX.

Q143 Feature **UNIX**

Which command displays the list of files and directories in UNIX?

A. dir

B. ls

C. list

D. show

Ans: B ls. This is a defining feature of UNIX.

Q144 Feature UNIX

Which command in UNIX displays the current working directory?

A. cwd

B. pwd

C. whereami

D. path

Ans: B pwd. This characteristic is frequently tested for UNIX.

Q145 Feature UNIX

Which command changes the current directory in UNIX?

A. cd

B. chdir only

C. move

D. goto

Ans: A cd. This trait helps distinguish UNIX from the other operating systems in this syllabus.

Commands & Architecture

Q146 Command UNIX

Which UNIX command is used to copy files?

A. cp

B. copy

C. dup

D. clone

Ans: A cp. This is the standard UNIX command tested in this syllabus.

Q147 Command UNIX

Which UNIX command moves or renames files?

A. mv

B. ren

C. move

D. rename

Ans: A mv. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q148 Command UNIX

Which UNIX command removes files?

A. rm

B. del

C. erase

D. cut

Ans: A rm. The remaining choices are not genuine UNIX commands or components.

Q149 Command UNIX

Which UNIX command creates a new directory?

A. mkdir

B. md

C. newdir

D. makedir

Ans: A mkdir. This is the standard UNIX command tested in this syllabus.

Q150 Command UNIX

Which UNIX command removes an empty directory?

A. rmdir

B. deldir

C. erasedir

D. cutdir

Ans: A rmdir. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q151 Command UNIX

Which UNIX command displays the contents of a text file?

A. cat

B. show

C. view

D. print

Ans: A cat. The remaining choices are not genuine UNIX commands or components.

Q152 Command UNIX

Which UNIX command is used to search for a pattern within files?

A. grep

B. find text

C. locate

D. search

Ans: A grep. This is the standard UNIX command tested in this syllabus.

Q153 Command UNIX

Which UNIX command changes file permissions?

A. chmod

B. chperm

C. setperm

D. attrib

Ans: A chmod. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q154 Command UNIX

Which UNIX command changes file ownership?

A. chown

B. setowner

C. own

D. ownership

Ans: A chown. The remaining choices are not genuine UNIX commands or components.

Q155 Command UNIX

Which UNIX command displays the manual/help pages for other commands?

A. man

B. help

C. info only

D. docs

Ans: A man. This is the standard UNIX command tested in this syllabus.

Q156 Command UNIX

Which UNIX command displays a list of currently logged-in users?

A. who

B. users

C. whoami only

D. listusers

Ans: A who. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q157 Command UNIX

Which text editor is traditionally and closely associated with UNIX systems?

A. vi

B. Notepad

C. WordPad

D. Edit

Ans: A vi. The remaining choices are not genuine UNIX commands or components.

Q158 Command UNIX

Which UNIX command is used to create archive files, often for backups?

A. tar

B. zipper

C. pack

D. bundle

Ans: A tar. This is the standard UNIX command tested in this syllabus.

Q159 Command UNIX

Which UNIX command displays disk space usage of the file system?

A. df

B. disk

C. space

D. usage

Ans: A df. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q160 Command UNIX

Which UNIX command displays the amount of disk space used by files or directories?

A. du

B. size

C. usage

D. space

Ans: A du. The remaining choices are not genuine UNIX commands or components.

Q161 Command UNIX

The UNIX operating system architecture is broadly divided into which two main parts?

A. Kernel and Shell

B. Registry and GUI

C. BIOS and CMOS

D. Compiler and Linker

Ans: A Kernel and Shell. This is the standard UNIX command tested in this syllabus.

Q162 Command UNIX

In UNIX architecture, which component interacts directly with computer hardware?

A. Shell

B. Kernel

C. Utilities

D. Applications only

Ans: B Kernel. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q163 Command UNIX

In UNIX architecture, which layer acts as the interface between the user and the kernel?

A. Shell

B. Hardware

C. BIOS

D. Firmware

Ans: A Shell. The remaining choices are not genuine UNIX commands or components.

Q164 Command UNIX

The outermost layer of UNIX architecture, containing user programs and utilities, is called the:

A. Kernel layer

B. Application/Utility layer

C. Hardware layer

D. BIOS layer

Ans: B Application/Utility layer. This is the standard UNIX command tested in this syllabus.

Q165 Command UNIX

UNIX uses which concept to manage and represent almost everything, including devices and processes?

A. Files and processes

B. Spreadsheets

C. Registries

D. Icons

Ans: A Files and processes. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q166 Command UNIX

The first process started by the UNIX kernel during boot, which initializes the rest of the system, is commonly called:

A. init

B. boot.com

C. start.exe

D. main

Ans: A init. The remaining choices are not genuine UNIX commands or components.

Q167 Command UNIX

UNIX inter-process communication can be achieved through which of the following mechanisms?

A. Pipes and signals

B. Only GUI dialog boxes

C. Only printed output

D. Only network cables

Ans: A Pipes and signals. This is the standard UNIX command tested in this syllabus.

Q168 Command UNIX

In UNIX, the "fork" system call is primarily used to:

A. Format a disk

B. Create a new child process

C. Delete a file

D. Change file permissions

Ans: B Create a new child process. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q169 Command UNIX

Typical responsibilities of the UNIX kernel include:

A. Process management, memory management, and device management

B. Only displaying icons

C. Only managing fonts

D. Only handling mouse clicks

Ans: A Process management, memory management, and device management. The remaining choices are not genuine UNIX commands or components.

Q170 Command UNIX

A sequence of UNIX commands saved together to automate a task is known as a:

A. Shell script

B. Spreadsheet

C. Slide deck

D. Registry

Ans: A Shell script. This is the standard UNIX command tested in this syllabus.

Q171 Command UNIX

UNIX system calls provide an interface between:

A. Two different users only

B. User programs and the kernel

C. Hardware and BIOS only

D. Two remote networks only

Ans: B User programs and the kernel. This is the correct UNIX term for this purpose; the other options are not valid UNIX commands.

Q172 Command UNIX

In UNIX, devices are typically represented and accessed as special files located under which directory?

A. /dev

B. /bin

C. /etc

D. /usr

Ans: A /dev. The remaining choices are not genuine UNIX commands or components.

Advantages & Limitations

Q173 Pros & Cons UNIX

Which of the following is a major advantage of UNIX?

A. Strong multiuser and multitasking support with stability

B. Requires no installation whatsoever

C. Cannot be networked

D. Works only with one specific type of hardware

Ans: A Strong multiuser and multitasking support with stability. This is a frequently tested advantage/limitation of UNIX.

Q174 Pros & Cons UNIX

UNIX's portability is considered an advantage mainly because:

A. It can be adapted to run on many different hardware platforms

B. It only runs on a single specific processor brand

C. It cannot be modified by vendors

D. It requires proprietary hardware only

Ans: A It can be adapted to run on many different hardware platforms. This is a well-known point raised when discussing UNIX's strengths and weaknesses.

Q175 Pros & Cons UNIX

A key advantage of UNIX in enterprise/server environments is:

A. High stability, security, and reliability for long-running systems

B. Lack of multiuser support

C. Being limited to single-user mode

D. Having no file permission system

Ans: A High stability, security, and reliability for long-running systems. This is commonly cited when comparing the advantages and limitations of UNIX.

Q176 Pros & Cons UNIX

Which of the following is considered a limitation of UNIX for casual/general users?

A. A very simple GUI by default for all users

B. A relatively steep learning curve due to command-based usage

C. No command-line option at all

D. No file system at all

Ans: B A relatively steep learning curve due to command-based usage. This is a frequently tested advantage/limitation of UNIX.

Q177 Pros & Cons UNIX

A limitation historically associated with UNIX is that:

A. It was too simple to ever learn

B. Different vendors created different, sometimes incompatible UNIX variants, causing fragmentation

C. It has no file permission system

D. It cannot run more than one process

Ans: B Different vendors created different, sometimes incompatible UNIX variants, causing fragmentation. This is a well-known point raised when discussing UNIX's strengths and weaknesses.

Q178 Pros & Cons UNIX

UNIX's built-in file permission system is considered an advantage because it:

A. Removes all access restrictions on files

B. Allows control over who can read, write, or execute a file

C. Disables multiuser support entirely

D. Prevents any file sharing whatsoever

Ans: B Allows control over who can read, write, or execute a file. This is commonly cited when comparing the advantages and limitations of UNIX.

Q179 Pros & Cons UNIX

An advantage of UNIX's modular design (small tools doing one job) is that it:

A. Increases complexity for even the simplest task

B. Makes it easier to combine tools using pipes for complex tasks

C. Reduces flexibility for users

D. Eliminates the ability to script tasks

Ans: B Makes it easier to combine tools using pipes for complex tasks. This is a frequently tested advantage/limitation of UNIX.

Q180 Pros & Cons UNIX

A limitation of UNIX is that its traditional command-line interface can be:

A. Very intuitive for first-time computer users with no training

B. Difficult for beginners unfamiliar with typed commands

C. Entirely menu-driven with no typing

D. Purely touch-based

Ans: B Difficult for beginners unfamiliar with typed commands. This is a well-known point raised when discussing UNIX's strengths and weaknesses.

Q181 Pros & Cons UNIX

UNIX's multiuser capability is particularly advantageous in which environment?

A. A single isolated home computer with one user

B. Organizations and institutions where many users share computing resources

C. Devices that are never connected to other users

D. Devices with no storage at all

Ans: B Organizations and institutions where many users share computing resources. This is commonly cited when comparing the advantages and limitations of UNIX.

Q182 Pros & Cons UNIX

UNIX's stability over long uptimes makes it especially advantageous for:

A. Servers and mission-critical systems

B. Disposable single-use devices only

C. Devices with no power source

D. Devices never connected to power

Ans: A Servers and mission-critical systems. This is a frequently tested advantage/limitation of UNIX.

Q183 Pros & Cons UNIX

A drawback historically associated with commercial UNIX licensing was that:

A. It was always completely free for everyone

B. Commercial UNIX licenses could be costly, limiting accessibility

C. It required no installation procedure

D. It had unlimited free redistribution from the start

Ans: B Commercial UNIX licenses could be costly, limiting accessibility. This is a well-known point raised when discussing UNIX's strengths and weaknesses.

Q184 Pros & Cons UNIX

UNIX's reliance on text-based commands can lead to which limitation for new users?

A. Easier visual navigation than a GUI

B. A greater chance of errors due to strict command syntax requirements

C. No need to learn anything at all

D. Complete automation without any typing

Ans: B A greater chance of errors due to strict command syntax requirements. This is commonly cited when comparing the advantages and limitations of UNIX.

Applications & Uses

Q185 Application UNIX

UNIX is widely used in which type of computing environment?

A. Servers, mainframes, and workstations

B. Only handheld calculators

C. Only gaming consoles

D. Only digital watches

Ans: A Servers, mainframes, and workstations. This reflects how UNIX is actually used in practice.

Q186 Application UNIX

UNIX-based systems are commonly used to power:

A. Web servers and internet infrastructure

B. Typewriters

C. Analog telephones

D. Mechanical clocks

Ans: A Web servers and internet infrastructure. This is a typical real-world use case for UNIX.

Q187 Application UNIX

UNIX and Unix-like systems are widely used in which technical field?

A. Software development, scientific computing, and research

B. Hand embroidery

C. Pottery making

D. Cooking recipes

Ans: A Software development, scientific computing, and research. This is a commonly cited practical application of UNIX.

Q188 Application UNIX

Which modern smartphone operating system has Unix-like roots?

A. iOS (based on Unix-like Darwin)

B. Windows Mobile (historically)

C. Symbian

D. Palm OS

Ans: A IOS (based on Unix-like Darwin). This reflects how UNIX is actually used in practice.

Q189 Application **UNIX**

UNIX is commonly chosen for systems that require very high reliability, such as:

A. Banking and telecommunications infrastructure

B. Disposable toys

C. Single-use paper forms

D. Manual typewriters

Ans: A Banking and telecommunications infrastructure. This is a typical real-world use case for UNIX.

Q190 Application **UNIX**

UNIX's early networking capabilities made it foundational to the development of:

A. The Internet and TCP/IP-based networking

B. Postal mail systems

C. Manual filing cabinets

D. Print-only communication

Ans: A The Internet and TCP/IP-based networking. This is a commonly cited practical application of UNIX.

Q191 Application **UNIX**

UNIX is commonly used in academic institutions to teach:

A. Operating system concepts and programming

B. Music composition only

C. Cooking

D. Painting

Ans: A Operating system concepts and programming. This reflects how UNIX is actually used in practice.

Q192 Application UNIX

UNIX shell scripting is commonly applied for:

A. Automating administrative and repetitive tasks

B. Designing 3D animations

C. Editing photographs

D. Composing music

Ans: A Automating administrative and repetitive tasks. This is a typical real-world use case for UNIX.

Assertion-Reason

Q193 Assertion-Reason UNIX

Assertion (A): UNIX is called a multiuser operating system. Reason (R): UNIX allows multiple users to log in and use system resources at the same time.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q194 Assertion-Reason UNIX

Assertion (A): UNIX is a multitasking operating system. Reason (R): UNIX can execute multiple processes concurrently using time-sharing.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q195 Assertion-Reason UNIX

Assertion (A): UNIX file names are case-sensitive. Reason (R): UNIX treats "Data.txt" and "data.txt" as two different files.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q196 Assertion-Reason UNIX

Assertion (A): The UNIX kernel directly interacts with computer hardware. Reason (R): The kernel manages processes, memory, and devices.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q197 Assertion-Reason UNIX

Assertion (A): UNIX is highly portable. Reason (R): UNIX was largely written in the high-level C programming language.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q198 Assertion-Reason UNIX

Assertion (A): UNIX provides a command-line interface through its shell. Reason (R): The shell interprets user-typed commands and passes them to the kernel for execution.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q199 Assertion-Reason UNIX

Assertion (A): UNIX treats hardware devices as ordinary files. Reason (R): This allows uniform commands to be used for interacting with both files and devices.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q200 Assertion-Reason UNIX

Assertion (A): UNIX requires a completely separate operating system installation for each individual user account. Reason (R): UNIX is fundamentally a single-user operating system.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. Both A and R are false

Ans: D Both A and R are false. Neither the assertion nor the reason is factually correct.

Q201 Assertion-Reason UNIX

Assertion (A): UNIX has no command-line interface at all. Reason (R): UNIX relies solely on a graphical user interface for all operations.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. Both A and R are false

Ans: D Both A and R are false. Neither the assertion nor the reason is factually correct.

True/False (MCQ Format)

Q202 True/False UNIX

Which statement about UNIX is TRUE?

A. UNIX supports only a single user at a time

B. UNIX supports multiple users simultaneously

C. UNIX has no file permission system

D. UNIX cannot run multiple processes

Ans: B UNIX supports multiple users simultaneously. This is the correct statement; the remaining options misstate a fact about UNIX.

Q203 True/False UNIX

Which statement about UNIX is FALSE?

A. UNIX was developed at Bell Labs

B. UNIX is a multiuser, multitasking OS

C. UNIX file names are case-insensitive

D. UNIX uses a hierarchical file system

Ans: C UNIX file names are case-insensitive. This statement is the inaccurate one, which is why it answers an "identify the FALSE statement" question; the other options are factually correct about UNIX.

Q204 True/False UNIX

Identify the TRUE statement about the UNIX shell.

A. The shell directly manages computer hardware

B. The shell interprets and executes user commands

C. The shell is a type of hardware device

D. The shell cannot run scripts

Ans: B The shell interprets and executes user commands. This is the correct statement; the remaining options misstate a fact about UNIX.

Q205 True/False UNIX

Identify the FALSE statement about UNIX commands.

A. ls lists files and directories

B. cp copies files

C. rm creates new files

D. mv moves or renames files

Ans: C rm creates new files. This statement is the inaccurate one, which is why it answers an "identify the FALSE statement" question; the other options are factually correct about UNIX.

Q206 True/False UNIX

Which statement about UNIX file permissions is TRUE?

A. Only the system administrator can ever have permissions

B. Permissions can be set separately for owner, group, and others

C. UNIX does not support file permissions

D. All users always have full access to all files

Ans: B Permissions can be set separately for owner, group, and others. This is the correct statement; the remaining options misstate a fact about UNIX.

Q207 True/False UNIX

Which statement about the UNIX kernel is FALSE?

A. The kernel manages memory

B. The kernel manages processes

C. The kernel is responsible for the desktop wallpaper image

D. The kernel manages device communication

Ans: C The kernel is responsible for the desktop wallpaper image. This statement is the inaccurate one, which is why it answers an "identify the FALSE statement" question; the other options are factually correct about UNIX.

Q208 True/False UNIX

Which statement is TRUE regarding UNIX portability?

A. UNIX can only run on the exact hardware it was first developed for

B. UNIX's design allows it to be ported to various hardware platforms

C. UNIX cannot be compiled on different systems

D. UNIX has never been adapted to new hardware

Ans: B UNIX's design allows it to be ported to various hardware platforms. This is the correct statement; the remaining options misstate a fact about UNIX.

Q209 True/False UNIX

Which statement is FALSE regarding UNIX multitasking?

A. Multiple processes can run seemingly at the same time

B. CPU time is shared among processes

C. UNIX can only ever execute one process for an entire session

D. Background processes can be started using &

Ans: C UNIX can only ever execute one process for an entire session. This statement is the inaccurate one, which is why it answers an "identify the FALSE statement" question; the other options are factually correct about UNIX.

Match the Following

Q210 Match UNIX

Match the UNIX command with its function: (1) ls (2) cp (3) rm (4) mv -- (a) Move/rename file (b) Copy file (c) List files (d) Remove file

A. 1-c, 2-b, 3-d, 4-a

B. 1-a, 2-b, 3-c, 4-d

C. 1-d, 2-c, 3-b, 4-a

D. 1-b, 2-a, 3-d, 4-c

Ans: A Each pair here correctly links the term with its function in UNIX.

Q211 Match UNIX

Match: (1) kernel (2) shell (3) man (4) grep -- (a) Search for a pattern in text (b) Displays manual pages (c) Core OS component managing hardware (d) Command interpreter

A. 1-c, 2-d, 3-b, 4-a

B. 1-a, 2-b, 3-c, 4-d

C. 1-d, 2-c, 3-a, 4-b

D. 1-b, 2-a, 3-d, 4-c

Ans: A These pairings correctly match each item with its role under UNIX.

Scenario-Based

Q212 Scenario UNIX

A system administrator needs to allow multiple employees to use the same server at the same time for different tasks. Which UNIX feature makes this possible?

A. Single-tasking design

B. Multiuser capability

C. Lack of file permissions

D. No process management

Ans: B Multiuser capability. This is the most suitable UNIX concept for the given situation.

Q213 Scenario UNIX

A user wants to feed the output of one command directly as input into another command on the UNIX command line. Which feature should be used?

A. Redirection only

B. Piping (|)

C. Background execution (&)

D. Changing file permissions

Ans: B Piping (|). This is the UNIX capability that directly addresses the situation described.

Q214 Scenario UNIX

An administrator wants a file to be modifiable only by its owner, while others can only read it. Which UNIX feature enables this?

A. File permission settings (chmod)

B. Disabling multitasking

C. Renaming the file

D. Formatting the disk

Ans: A File permission settings (chmod). This feature of UNIX is exactly what the scenario calls for.

Q215 Scenario UNIX

A long-running task needs to continue even after the user logs out, without blocking further command entry. Which feature helps achieve this?

A. Running the process in the background using &

B. Deleting the process

C. Disabling the shell

D. Using single-tasking mode

Ans: A Running the process in the background using &. This is the most suitable UNIX concept for the given situation.

Q216 Scenario UNIX

A developer wants to automate a sequence of repetitive UNIX commands. What should they create?

A. A shell script

B. A new kernel

C. A new file system

D. A new hardware driver

Ans: A A shell script. This is the UNIX capability that directly addresses the situation described.

Q217 Scenario UNIX

A new UNIX user types a file name with different capitalization and gets a "file not found" error. Which UNIX characteristic explains this?

A. UNIX file names are case-sensitive

B. UNIX file names are case-insensitive

C. UNIX does not support file names

D. UNIX requires no file extensions

Ans: A UNIX file names are case-sensitive. This feature of UNIX is exactly what the scenario calls for.

Q218 Scenario UNIX

An organization wants an OS that can run reliably on a server for months without restarting. Which UNIX trait best supports this need?

A. High stability and uptime reliability

B. Single-user restriction

C. No multitasking support

D. Absence of a file system

Ans: A High stability and uptime reliability. This is the most suitable UNIX concept for the given situation.

Q219 Scenario UNIX

A system needs to identify which process is consuming too much CPU and then terminate it. Which two UNIX commands would typically be used together?

A. ps and kill

B. ls and cp

C. cd and pwd

D. mkdir and rmdir

Ans: A ps and kill. This is the UNIX capability that directly addresses the situation described.

Q220 Scenario UNIX

A company wants a portable OS that can be deployed across servers from different hardware vendors. Why is UNIX historically a suitable choice?

A. Because it was designed with portability in mind, largely written in C

B. Because it only works on one specific brand of hardware

C. Because it has no kernel

D. Because it cannot be modified by anyone

Ans: A Because it was designed with portability in mind, largely written in C. This feature of UNIX is exactly what the scenario calls for.

Section 3: MS-WINDOWS

105 Multiple-Choice Questions | Each question includes the correct answer and a short explanation

Definition & Conceptual

Q221 Definition **MS-Windows**

MS-Windows is developed by which company?

A. Apple

B. Microsoft

C. IBM

D. Google

Ans: B Microsoft. This is a fundamental fact to remember about MS-Windows.

Q222 Definition **MS-Windows**

MS-Windows is primarily known for which type of user interface?

A. Command Line Interface

B. Graphical User Interface (GUI)

C. Voice-only Interface

D. No interface at all

Ans: B Graphical User Interface (GUI). This is one of the basic identifying facts about MS-Windows.

Q223 Definition **MS-Windows**

The first version of Microsoft Windows was released in which year?

A. 1981

B. 1985

C. 1990

D. 1995

Ans: B 1985. This is a standard definitional point covered under MS-Windows.

Q224 Definition **MS-Windows**

Early versions of Windows (such as Windows 3.x) ran on top of which underlying operating system?

A. UNIX

B. MS-DOS

C. Linux

D. CP/M

Ans: B MS-DOS. Keep this as a core MS-Windows fact for the exam.

Q225 Definition **MS-Windows**

Windows 95 was historically significant mainly because it:

A. Was a widely popular Windows release with a more integrated GUI experience for typical users

B. Removed the graphical interface entirely

C. Was based entirely on UNIX

D. Had no Start button

Ans: A Was a widely popular Windows release with a more integrated GUI experience for typical users. This is a fundamental fact to remember about MS-Windows.

Q226 Definition **MS-Windows**

In terms of typical desktop edition design, MS-Windows is best described as primarily supporting:

A. Many simultaneous active user sessions like a mainframe

B. One active user session at a time, although it supports running multiple programs

C. No user accounts at all

D. Server-only operation

Ans: B One active user session at a time, although it supports running multiple programs. This is one of the basic identifying facts about MS-Windows.

Q227 Definition **MS-Windows**

In terms of task handling, MS-Windows is classified as a:

A. Single-tasking OS

B. Multitasking OS

C. No-tasking OS

D. Batch-only OS

Ans: B Multitasking OS. This is a standard definitional point covered under MS-Windows.

Q228 Definition **MS-Windows**

The graphical elements used to represent files, folders, and programs visually in Windows are called:

A. Commands

B. Icons

C. Drivers

D. Registers

Ans: B Icons. Keep this as a core MS-Windows fact for the exam.

Q229 Definition **MS-Windows**

The bar at the bottom of the Windows screen showing open programs and the Start button is called the:

A. Desktop

B. Taskbar

C. Ribbon

D. Sidebar

Ans: B Taskbar. This is a fundamental fact to remember about MS-Windows.

Q230 Definition **MS-Windows**

The main screen area in Windows where icons and shortcuts are displayed is called the:

A. Taskbar

B. Desktop

C. Explorer

D. Dashboard

Ans: B Desktop. This is one of the basic identifying facts about MS-Windows.

Q231 Definition **MS-Windows**

The Windows feature that temporarily stores deleted files before permanent deletion is called the:

A. Trash Can

B. Recycle Bin

C. Archive

D. Backup Folder

Ans: B Recycle Bin. This is a standard definitional point covered under MS-Windows.

Q232 Definition **MS-Windows**

The Windows database that stores low-level system and application configuration settings is called the:

A. Control Panel

B. Registry

C. Task Manager

D. File Explorer

Ans: B Registry. Keep this as a core MS-Windows fact for the exam.

Q233 Definition MS-Windows

The Windows file system commonly used in modern versions for better security and large file support is:

A. FAT16

B. NTFS

C. ext3

D. HFS+

Ans: B NTFS. This is a fundamental fact to remember about MS-Windows.

Q234 Definition MS-Windows

The button traditionally used to access programs, settings, and shutdown options in Windows is called the:

A. Power button

B. Start button

C. Menu key

D. Home button

Ans: B Start button. This is one of the basic identifying facts about MS-Windows.

Q235 Definition MS-Windows

MS-Windows operating systems are widely categorized, in terms of licensing, as:

A. Free and open-source

B. Proprietary/commercial software

C. Public domain software

D. Freeware with full source code access

Ans: B Proprietary/commercial software. This is a standard definitional point covered under MS-Windows.

Features & GUI Concepts

Q236 Feature **MS-Windows**

A key feature that distinguishes Windows from MS-DOS is:

A. Command-only interaction with no visual elements

B. A Graphical User Interface with icons, windows, and menus

C. No support for a mouse

D. No multitasking support

Ans: B A Graphical User Interface with icons, windows, and menus. This is a key characteristic associated with MS-Windows.

Q237 Feature **MS-Windows**

In GUI terminology, a "window" refers to:

A. A physical glass pane

B. A rectangular area on screen displaying a program or content

C. A type of file extension

D. A network protocol

Ans: B A rectangular area on screen displaying a program or content. This is a defining feature of MS-Windows.

Q238 Feature **MS-Windows**

The technique of clicking and holding the mouse button to move an icon or window is called:

A. Dragging

B. Scrolling

C. Right-clicking

D. Hovering

Ans: A Dragging. This characteristic is frequently tested for MS-Windows.

Q239 Feature MS-Windows

A small image representing a file, folder, or application in the Windows GUI is called a/an:

A. Pixel

B. Icon

C. Cursor

D. Widget

Ans: B Icon. This trait helps distinguish MS-Windows from the other operating systems in this syllabus.

Q240 Feature MS-Windows

The pointer controlled by the mouse on a Windows screen is called the:

A. Icon

B. Cursor

C. Window

D. Taskbar

Ans: B Cursor. This is a key characteristic associated with MS-Windows.

Q241 Feature MS-Windows

Which feature allows multiple windows/programs to be open and switched between in Windows?

A. Single-window restriction

B. Multitasking with window management

C. No window support

D. Command-only switching

Ans: B Multitasking with window management. This is a defining feature of MS-Windows.

Q242 Feature **MS-Windows**

The Windows feature that allows users to manage files and folders visually is called:

A. File Explorer (Windows Explorer)

B. Registry Editor

C. Task Manager

D. Control Panel only

Ans: A File Explorer (Windows Explorer). This characteristic is frequently tested for MS-Windows.

Q243 Feature **MS-Windows**

Drop-down lists of commands and options within Windows applications are called:

A. Menus

B. Icons

C. Windows

D. Panes

Ans: A Menus. This trait helps distinguish MS-Windows from the other operating systems in this syllabus.

Q244 Feature **MS-Windows**

The Windows feature that displays system processes and allows ending unresponsive programs is called:

A. File Explorer

B. Task Manager

C. Control Panel

D. Registry Editor

Ans: B Task Manager. This is a key characteristic associated with MS-Windows.

Q245 Feature **MS-Windows**

Besides the keyboard, which input device is primarily used to interact with the Windows GUI?

A. Mouse/pointing device

B. Punch cards

C. Magnetic tape reader

D. Telegraph key

Ans: A Mouse/pointing device. This is a defining feature of MS-Windows.

Q246 Feature **MS-Windows**

The central place in Windows for changing system settings such as display, sound, and hardware is traditionally called the:

A. Control Panel

B. Recycle Bin

C. Notepad

D. Paint

Ans: A Control Panel. This characteristic is frequently tested for MS-Windows.

Q247 Feature **MS-Windows**

The acronym WYSIWYG, closely associated with GUI operating systems like Windows, stands for:

A. What You See Is What You Get

B. Windows You See In Graphics

C. Work Your System In Graphics

D. What You Save Is What You Gain

Ans: A What You See Is What You Get. This trait helps distinguish MS-Windows from the other operating systems in this syllabus.

Q248 Feature **MS-Windows**

Windows' support for "Plug and Play" means that:

A. Hardware devices are automatically detected and configured when connected

B. Software must always be manually configured before use

C. No hardware can ever be added after installation

D. Only USB devices can be detected

Ans: A Hardware devices are automatically detected and configured when connected. This is a key characteristic associated with MS-Windows.

Q249 Feature **MS-Windows**

A "shortcut" in Windows is best described as:

A. A duplicate copy of the original file

B. A link/pointer to the original file or program for quick access

C. A type of computer virus

D. A compressed file format

Ans: B A link/pointer to the original file or program for quick access. This is a defining feature of MS-Windows.

Q250 Feature **MS-Windows**

Multiple programs running together in Windows, each potentially in its own window, demonstrates which OS capability?

A. Single-tasking

B. Multitasking

C. No-tasking

D. Batch processing only

Ans: B Multitasking. This characteristic is frequently tested for MS-Windows.

Q251 Feature **MS-Windows**

The Windows Clipboard feature is primarily used for:

A. Permanently deleting files

B. Temporarily storing copied or cut data for pasting

C. Formatting disks

D. Managing user accounts

Ans: B Temporarily storing copied or cut data for pasting. This trait helps distinguish MS-Windows from the other operating systems in this syllabus.

Q252 Feature **MS-Windows**

Windows' "drag and drop" feature allows users to:

A. Move or copy files/icons by dragging them with the mouse

B. Format the hard disk

C. Install a new operating system

D. Change file permissions only

Ans: A Move or copy files/icons by dragging them with the mouse. This is a key characteristic associated with MS-Windows.

Q253 Feature **MS-Windows**

The taskbar notification area showing the clock and background app icons is commonly called the:

A. System tray

B. Ribbon

C. ToolBox

D. Dock

Ans: A System tray. This is a defining feature of MS-Windows.

Q254 Feature **MS-Windows**

Resizing a window by dragging its edge or corner illustrates which GUI feature?

A. Fixed window sizing only

B. Flexible/resizable windows

C. Command-only resizing

D. No resizing support

Ans: B Flexible/resizable windows. This characteristic is frequently tested for MS-Windows.

Q255 Feature **MS-Windows**

The Windows feature that lets users quickly search for files, settings, and applications by typing keywords is called:

A. Windows Search

B. Control Panel only

C. Disk Cleanup

D. Device Manager

Ans: A Windows Search. This trait helps distinguish MS-Windows from the other operating systems in this syllabus.

Architecture & Working

Q256 Architecture **MS-Windows**

The architecture used by modern NT-based Windows versions (such as Windows 10/11) is best described as a:

A. Purely command-line system with no kernel

B. Hybrid kernel architecture

C. Single monolithic 16-bit DOS layer

D. System with no kernel architecture at all

Ans: B Hybrid kernel architecture. This is a key architectural fact about MS-Windows.

Q257 Architecture **MS-Windows**

Which core Windows component manages hardware resources and provides services to applications?

A. Kernel

B. Recycle Bin

C. Notepad

D. Paint

Ans: A Kernel. This reflects how MS-Windows's internal architecture is organized.

Q258 Architecture **MS-Windows**

The Windows component responsible for the visual desktop experience, windows, and menus is part of the:

A. GUI subsystem (e.g., the Windows shell/Explorer)

B. BIOS

C. Hard disk firmware

D. Network card driver

Ans: A GUI subsystem (e.g., the Windows shell/Explorer). This is part of the standard architectural description of MS-Windows.

Q259 Architecture **MS-Windows**

Modern Windows operating systems commonly use which component to start loading the OS at boot?

A. BOOTMGR

B. COMMAND.COM

C. IO.SYS

D. CONFIG.SYS

Ans: A BOOTMGR. This is a key architectural fact about MS-Windows.

Q260 Architecture **MS-Windows**

The file that historically allowed older 16-bit Windows versions to launch on top of MS-DOS was:

A. WIN.COM

B. NTOSKRNL.EXE

C. BOOTMGR

D. explorer.exe

Ans: A WIN.COM. This reflects how MS-Windows's internal architecture is organized.

Q261 Architecture **MS-Windows**

The core executive/kernel file in modern (NT-based) Windows is commonly:

A. NTOSKRNL.EXE

B. COMMAND.COM

C. IO.SYS

D. AUTOEXEC.BAT

Ans: A NTOSKRNL.EXE. This is part of the standard architectural description of MS-Windows.

Q262 Architecture **MS-Windows**

Windows' use of virtual memory management allows:

A. Hard disk space to be used to extend available RAM

B. All memory usage to be disabled

C. The system to run without any memory

D. The need for RAM to be removed entirely

Ans: A Hard disk space to be used to extend available RAM. This is a key architectural fact about MS-Windows.

Q263 Architecture MS-Windows

Which Windows architecture layer provides Application Programming Interfaces (APIs), such as the Win32 API, for developers?

A. User mode subsystem

B. BIOS

C. Firmware

D. CMOS

Ans: A User mode subsystem. This reflects how MS-Windows's internal architecture is organized.

Q264 Architecture MS-Windows

Windows separates operations into which two broad processor privilege modes?

A. Kernel mode and User mode

B. Safe mode and Normal mode only

C. Online mode and Offline mode

D. Admin mode and Guest mode only

Ans: A Kernel mode and User mode. This is part of the standard architectural description of MS-Windows.

Q265 Architecture MS-Windows

The Windows process most directly responsible for the desktop shell experience, including the taskbar and Start menu, is typically:

A. explorer.exe

B. winlogon only

C. services.exe

D. lsass.exe

Ans: A Explorer.exe. This is a key architectural fact about MS-Windows.

Q266 Architecture MS-Windows

Windows supports preemptive multitasking, which means:

A. The operating system controls and allocates CPU time among processes

B. Each application controls CPU time entirely on its own

C. Only one program can ever run

D. No CPU scheduling occurs

Ans: A The operating system controls and allocates CPU time among processes. This reflects how MS-Windows's internal architecture is organized.

Q267 Architecture MS-Windows

Device drivers in Windows function to:

A. Allow the operating system to communicate with specific hardware devices

B. Replace the need for a kernel entirely

C. Eliminate the need for a GUI

D. Format the hard disk only

Ans: A Allow the operating system to communicate with specific hardware devices. This is part of the standard architectural description of MS-Windows.

Advantages & Limitations

Q268 Pros & Cons MS-Windows

A major advantage of MS-Windows is:

A. A user-friendly graphical interface suitable for general users

B. Requiring command memorization for all tasks

C. No support for a mouse

D. No multitasking support

Ans: A A user-friendly graphical interface suitable for general users. This is a frequently tested advantage/limitation of MS-Windows.

Q269 Pros & Cons **MS-Windows**

MS-Windows is widely adopted in homes and offices mainly because of:

A. Its ease of use through GUI and broad software/hardware compatibility

B. Its requirement to type complex commands for every task

C. Its lack of any printer support

D. Its inability to run more than one application

Ans: A Its ease of use through GUI and broad software/hardware compatibility. This is a well-known point raised when discussing MS-Windows's strengths and weaknesses.

Q270 Pros & Cons **MS-Windows**

A limitation of MS-Windows compared with some lightweight, command-line-only systems is:

A. Generally higher hardware resource requirements

B. Complete inability to run any software

C. No graphical interface at all

D. No mouse support

Ans: A Generally higher hardware resource requirements. This is commonly cited when comparing the advantages and limitations of MS-Windows.

Q271 Pros & Cons **MS-Windows**

A security-related limitation historically associated with widely-used Windows systems is:

A. Being a frequent target for malware/viruses due to widespread usage

B. Complete immunity to all viruses

C. No need for antivirus software ever

D. No user accounts existing at all

Ans: A Being a frequent target for malware/viruses due to widespread usage. This is a frequently tested advantage/limitation of MS-Windows.

Q272 Pros & Cons MS-Windows

An advantage of Windows' broad market adoption is:

A. Extensive third-party software and hardware driver support

B. A very limited number of available applications

C. No community support whatsoever

D. No documentation available

Ans: A Extensive third-party software and hardware driver support. This is a well-known point raised when discussing MS-Windows's strengths and weaknesses.

Q273 Pros & Cons MS-Windows

A limitation of proprietary licensing in Windows is that:

A. Users can freely modify and redistribute the source code

B. Users typically must purchase a license and cannot access or modify the source code

C. It is always completely free of charge

D. It has no licensing terms at all

Ans: B Users typically must purchase a license and cannot access or modify the source code. This is commonly cited when comparing the advantages and limitations of MS-Windows.

Q274 Pros & Cons MS-Windows

The user-friendliness of the Windows GUI is an advantage especially for:

A. Expert programmers only

B. Beginners and general users unfamiliar with command-line systems

C. Mainframe administrators only

D. Embedded device firmware development only

Ans: B Beginners and general users unfamiliar with command-line systems. This is a frequently tested advantage/limitation of MS-Windows.

Q275 Pros & Cons **MS-Windows**

A limitation of Windows in terms of resource usage on older hardware is that it:

A. Runs extremely fast on minimal resources in all cases

B. May require more RAM and processing power than lightweight OS alternatives

C. Needs no RAM at all

D. Requires no processor at all

Ans: B May require more RAM and processing power than lightweight OS alternatives. This is a well-known point raised when discussing MS-Windows's strengths and weaknesses.

Q276 Pros & Cons **MS-Windows**

An advantage of Windows is the wide availability of built-in utilities such as:

A. Notepad, Paint, Calculator, and File Explorer

B. No utilities are provided by default

C. Only a command prompt

D. Only a calculator

Ans: A Notepad, Paint, Calculator, and File Explorer. This is commonly cited when comparing the advantages and limitations of MS-Windows.

Q277 Pros & Cons **MS-Windows**

A general limitation of GUI-based systems like Windows for repetitive, large-scale automated tasks is that:

A. GUIs are always faster for scripting bulk operations

B. Pure GUI interactions can be slower to automate compared to command-line scripting

C. GUIs cannot display any icons at all

D. GUIs require no mouse at all

Ans: B Pure GUI interactions can be slower to automate compared to command-line scripting. This is a frequently tested advantage/limitation of MS-Windows.

Q278 Pros & Cons **MS-Windows**

Windows' broad compatibility advantage refers to its ability to:

A. Run a very wide range of commercial software and games designed for the Windows platform

B. Run only one specific type of application

C. Refuse all third-party applications

D. Support no peripherals at all

Ans: A Run a very wide range of commercial software and games designed for the Windows platform. This is a well-known point raised when discussing MS-Windows's strengths and weaknesses.

Q279 Pros & Cons **MS-Windows**

A disadvantage sometimes cited about frequent Windows updates is that they:

A. Never affect system performance in any way

B. Can sometimes require restarts and consume time/bandwidth

C. Are always instant and completely unnoticeable

D. Eliminate the need for security entirely

Ans: B Can sometimes require restarts and consume time/bandwidth. This is commonly cited when comparing the advantages and limitations of MS-Windows.

Q280 Pros & Cons **MS-Windows**

Windows' multitasking and multimedia support make it advantageous for:

A. General-purpose desktop computing, including office work, browsing, and entertainment

B. Devices with no display at all

C. Systems requiring no user interaction

D. Strictly read-only devices

Ans: A General-purpose desktop computing, including office work, browsing, and entertainment. This is a frequently tested advantage/limitation of MS-Windows.

Q281 Pros & Cons **MS-Windows**

Compared with UNIX, a point sometimes raised about desktop Windows in server environments is that:

A. It has a greater historical reputation for long-term uptime stability than UNIX

B. Some administrators consider UNIX/Linux servers to have an edge in stability and resource efficiency for certain workloads

C. Windows cannot run any server software

D. Windows has no GUI at all

Ans: B Some administrators consider UNIX/Linux servers to have an edge in stability and resource efficiency for certain workloads. This is a well-known point raised when discussing MS-Windows's strengths and weaknesses.

Q282 Pros & Cons **MS-Windows**

The cost of purchasing licensed copies of Windows can be considered a:

A. Major advantage for budget-conscious users

B. Limitation for some users compared to free/open-source alternatives

C. Feature that has no impact on adoption

D. Irrelevant factor in all cases

Ans: B Limitation for some users compared to free/open-source alternatives. This is commonly cited when comparing the advantages and limitations of MS-Windows.

Applications & Uses

Q283 Application **MS-Windows**

MS-Windows is widely used in which setting?

A. Home, business, and educational desktop/laptop computing

B. Only inside calculators

C. Only on punch-card machines

D. Only as firmware in microwaves

Ans: A Home, business, and educational desktop/laptop computing. This reflects how MS-Windows is actually used in practice.

Q284 Application **MS-Windows**

Windows operating systems are commonly used for which type of productivity work?

A. Word processing, spreadsheets, and presentations

B. Manual typewriting only

C. Postal sorting only

D. Analog photography only

Ans: A Word processing, spreadsheets, and presentations. This is a typical real-world use case for MS-Windows.

Q285 Application **MS-Windows**

Windows is a popular platform for which entertainment-related activity?

A. PC gaming and multimedia playback

B. Manual board games only

C. Radio broadcasting only

D. Vinyl record manufacturing

Ans: A PC gaming and multimedia playback. This is a commonly cited practical application of MS-Windows.

Q286 Application **MS-Windows**

Many businesses choose Windows for office desktops mainly because of:

A. Wide compatibility with business software like Microsoft Office

B. A complete lack of office software

C. Inability to connect printers

D. No support for networking at all

Ans: A Wide compatibility with business software like Microsoft Office. This reflects how MS-Windows is actually used in practice.

Q287 Application **MS-Windows**

Windows Server editions are specifically designed for:

A. Powering server infrastructure, hosting services, and managing networks

B. Only running games

C. Only home desktop use

D. Only mobile phones

Ans: A Powering server infrastructure, hosting services, and managing networks. This is a typical real-world use case for MS-Windows.

Q288 Application **MS-Windows**

Educational institutions often use Windows-based computer labs because of:

A. Familiarity, ease of use, and broad educational software availability

B. Mandatory command-line-only operation

C. A complete lack of GUI

D. Very limited application support

Ans: A Familiarity, ease of use, and broad educational software availability. This is a commonly cited practical application of MS-Windows.

Q289 Application **MS-Windows**

Windows is commonly used as the operating system for which common personal computing devices?

A. Desktop PCs and laptops

B. Only mainframes

C. Only supercomputers

D. Only smartwatches

Ans: A Desktop PCs and laptops. This reflects how MS-Windows is actually used in practice.

Q290 Application **MS-Windows**

Wide availability of graphic design and multimedia editing software makes Windows popular among:

A. Creative professionals and designers

B. Users who avoid all software

C. Users with no computers

D. Users who only use a command line

Ans: A Creative professionals and designers. This is a typical real-world use case for MS-Windows.

Assertion-Reason

Q291 Assertion-Reason **MS-Windows**

Assertion (A): MS-Windows uses a Graphical User Interface. Reason (R): Windows allows users to interact with icons, windows, and menus using a mouse.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q292 Assertion-Reason **MS-Windows**

Assertion (A): MS-Windows supports multitasking. Reason (R): Windows allows multiple applications to run and be switched between using separate windows.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q293 Assertion-Reason MS-Windows

Assertion (A): The Windows Registry is a critical system database. Reason (R): The Registry stores configuration settings for the operating system and installed applications.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q294 Assertion-Reason MS-Windows

Assertion (A): Windows requires users to memorize text commands to perform all tasks. Reason (R): Windows is primarily a graphical, icon-driven operating system.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: D A is false, but R is true. The assertion is incorrect, while the reason on its own is a true statement.

Q295 Assertion-Reason MS-Windows

Assertion (A): Plug and Play simplifies hardware installation in Windows. Reason (R): Plug and Play allows the OS to automatically detect and configure newly connected hardware.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q296 Assertion-Reason MS-Windows

Assertion (A): Early Windows versions like Windows 3.x required MS-DOS to function. Reason (R): Early Windows versions ran as a graphical shell/environment on top of MS-DOS.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q297 Assertion-Reason MS-Windows

Assertion (A): The Recycle Bin permanently deletes files the instant they are removed. Reason (R): The Recycle Bin temporarily stores deleted files, allowing recovery before permanent deletion.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: D A is false, but R is true. The assertion is incorrect, while the reason on its own is a true statement.

Q298 Assertion-Reason MS-Windows

Assertion (A): Task Manager in Windows can be used to end unresponsive programs. Reason (R): Task Manager displays running processes and system performance information.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q299 Assertion-Reason MS-Windows

Assertion (A): NTFS is a file system used by modern Windows versions. Reason (R): NTFS supports features like file permissions and large file/volume sizes better than older FAT systems.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

True/False (MCQ Format)

Q300 True/False MS-Windows

Which statement about MS-Windows is TRUE?

A. Windows uses only a command-line interface

B. Windows uses a Graphical User Interface as its primary mode of interaction

C. Windows cannot run more than one program at a time

D. Windows has no Start menu in any version

Ans: B Windows uses a Graphical User Interface as its primary mode of interaction. This is the correct statement; the remaining options misstate a fact about MS-Windows.

Q301 True/False MS-Windows

Which statement about MS-Windows is FALSE?

A. Windows supports multitasking

B. Windows was developed by Microsoft

C. Windows has never had a graphical interface

D. Windows uses icons to represent files and programs

Ans: C Windows has never had a graphical interface. This statement is the inaccurate one, which is why it answers an "identify the FALSE statement" question; the other options are factually correct about MS-Windows.

Q302 True/False **MS-Windows**

Identify the TRUE statement about early Windows versions.

A. Windows 3.x ran completely independently without MS-DOS

B. Windows 3.x operated as a graphical environment running on top of MS-DOS

C. Windows has always been completely UNIX-based

D. Windows 3.x had no graphical elements at all

Ans: B Windows 3.x operated as a graphical environment running on top of MS-DOS. This is the correct statement; the remaining options misstate a fact about MS-Windows.

Q303 True/False **MS-Windows**

Identify the FALSE statement about the Windows Recycle Bin.

A. It temporarily stores deleted files

B. Files can sometimes be restored from it

C. It permanently destroys files the moment they are deleted, with no recovery option

D. It can be emptied to free disk space

Ans: C It permanently destroys files the moment they are deleted, with no recovery option. This statement is the inaccurate one, which is why it answers an "identify the FALSE statement" question; the other options are factually correct about MS-Windows.

Q304 True/False **MS-Windows**

Which statement is TRUE regarding the Windows Control Panel?

A. It is used to change system settings such as display and sound

B. It is used only to play games

C. It is a plain text editor

D. It cannot be used to manage hardware

Ans: A It is used to change system settings such as display and sound. This is the correct statement; the remaining options misstate a fact about MS-Windows.

Q305 True/False MS-Windows

Which statement is FALSE regarding the Windows Task Manager?

A. It can show running applications and processes

B. It can be used to end unresponsive tasks

C. It is used specifically to format hard disks

D. It can show CPU and memory usage

Ans: C It is used specifically to format hard disks. This statement is the inaccurate one, which is why it answers an "identify the FALSE statement" question; the other options are factually correct about MS-Windows.

Q306 True/False MS-Windows

Which statement is TRUE about Windows file systems?

A. Windows cannot use any file system other than FAT16

B. Modern Windows commonly uses NTFS for system drives

C. Windows file systems never support file permissions

D. Windows has no concept of a file system

Ans: B Modern Windows commonly uses NTFS for system drives. This is the correct statement; the remaining options misstate a fact about MS-Windows.

Q307 True/False MS-Windows

Which statement is FALSE about Windows multitasking?

A. Multiple windows/applications can be open simultaneously

B. Users can switch between open applications using the taskbar

C. Windows can only ever run a single application throughout a session

D. The OS schedules CPU time among running applications

Ans: C Windows can only ever run a single application throughout a session. This statement is the inaccurate one, which is why it answers an "identify the FALSE statement" question; the other options are factually correct about MS-Windows.

Match the Following

Q308 Match **MS-Windows**

Match the Windows component with its function: (1) Taskbar (2) Recycle Bin (3) Control Panel (4) File Explorer -- (a) Manage files/folders (b) Change system settings (c) Show open programs/Start button (d) Store deleted files temporarily

A. 1-c, 2-d, 3-b, 4-a

B. 1-a, 2-b, 3-c, 4-d

C. 1-d, 2-c, 3-a, 4-b

D. 1-b, 2-a, 3-d, 4-c

Ans: A Each pair here correctly links the term with its function in MS-Windows.

Q309 Match **MS-Windows**

Match: (1) NTOSKRNL.EXE (2) explorer.exe (3) Registry (4) Task Manager -- (a) Stores configuration settings (b) Core kernel/executive (c) Desktop shell process (d) Shows running processes

A. 1-b, 2-c, 3-a, 4-d

B. 1-a, 2-b, 3-c, 4-d

C. 1-d, 2-a, 3-b, 4-c

D. 1-c, 2-d, 3-a, 4-b

Ans: A These pairings correctly match each item with its role under MS-Windows.

Scenario-Based

Q310 Scenario **MS-Windows**

A new computer user finds it easier to click on pictures/icons rather than type commands to open programs. Which feature of Windows supports this preference?

A. Command Line Interface

B. Graphical User Interface

C. Batch processing

D. Kernel mode only

Ans: B Graphical User Interface. This is the most suitable MS-Windows concept for the given situation.

Q311 Scenario **MS-Windows**

A user accidentally deletes an important file and wants to recover it shortly after deletion. Where should they look first in Windows?

A. Recycle Bin

B. Control Panel

C. Registry

D. Task Manager

Ans: A Recycle Bin. This is the MS-Windows capability that directly addresses the situation described.

Q312 Scenario **MS-Windows**

A program on a Windows computer stops responding. Which tool can the user use to forcibly close it?

A. Task Manager

B. Recycle Bin

C. Notepad

D. Paint

Ans: A Task Manager. This feature of MS-Windows is exactly what the scenario calls for.

Q313 Scenario **MS-Windows**

A user connects a new USB device, and Windows automatically detects and installs the necessary driver without manual setup. Which Windows feature enabled this?

A. Plug and Play

B. Registry Editor

C. Recycle Bin

D. Control Panel only

Ans: A Plug and Play. This is the most suitable MS-Windows concept for the given situation.

Q314 Scenario MS-Windows

A user wants to change the desktop background and sound settings on their Windows computer. Which feature should they use?

A. Control Panel/Settings

B. File Explorer

C. Notepad

D. Recycle Bin

Ans: A Control Panel/Settings. This is the MS-Windows capability that directly addresses the situation described.

Q315 Scenario MS-Windows

An office worker needs to work on a document, browse the internet, and listen to music all at the same time on a Windows PC. Which Windows capability allows this?

A. Single-tasking

B. Multitasking with multiple open windows

C. Batch-only processing

D. No application switching

Ans: B Multitasking with multiple open windows. This feature of MS-Windows is exactly what the scenario calls for.

Q316 Scenario MS-Windows

A technician wants to view and carefully adjust low-level configuration settings used by installed applications and the OS. Which Windows component should they use?

A. Registry Editor

B. Paint

C. Calculator

D. Recycle Bin

Ans: A Registry Editor. This is the most suitable MS-Windows concept for the given situation.

Q317 Scenario **MS-Windows**

A student wants to quickly find a specific file on a large Windows hard disk without manually browsing every folder. Which feature should they use?

A. Windows Search

B. Recycle Bin

C. Control Panel

D. Task Manager

Ans: A Windows Search. This is the MS-Windows capability that directly addresses the situation described.

Q318 Scenario **MS-Windows**

A computer has multiple family members who each want their own separate desktop, files, and settings. Which Windows feature supports this?

A. User Accounts/Profiles

B. Recycle Bin

C. Notepad

D. Paint

Ans: A User Accounts/Profiles. This feature of MS-Windows is exactly what the scenario calls for.

Applications & Uses

Q319 Application **MS-Windows**

The Windows tool used to capture an image of all or part of the screen is generally called the:

A. Snipping/Screenshot tool

B. Format tool

C. Registry Editor

D. Disk Cleanup

Ans: A Snipping/Screenshot tool. This reflects how MS-Windows is actually used in practice.

Q320 Application **MS-Windows**

Windows Update is primarily used to:

A. Download and install OS patches, security fixes, and feature updates

B. Permanently delete all user files

C. Format the hard drive

D. Disable the graphical interface

Ans: A Download and install OS patches, security fixes, and feature updates. This is a typical real-world use case for MS-Windows.

Q321 Application **MS-Windows**

The Windows feature allowing files to be compressed to save disk space is often referred to as:

A. File/Folder Compression

B. Recycle Bin

C. Control Panel

D. Notepad

Ans: A File/Folder Compression. This is a commonly cited practical application of MS-Windows.

Q322 Application **MS-Windows**

Device Manager in Windows is primarily used to:

A. View and manage hardware devices and their drivers

B. Edit plain text files

C. Browse the internet

D. Manage user passwords only

Ans: A View and manage hardware devices and their drivers. This reflects how MS-Windows is actually used in practice.

Q323 Application **MS-Windows**

The Windows feature that allows scheduling programs to run automatically at specific times is called:

A. Task Scheduler

B. Recycle Bin

C. Notepad

D. Paint

Ans: A Task Scheduler. This is a typical real-world use case for MS-Windows.

Q324 Application **MS-Windows**

Windows' "Safe Mode" is primarily used for:

A. Everyday normal computing tasks

B. Troubleshooting and diagnosing system problems with minimal drivers/services loaded

C. Gaming with maximum graphics settings

D. Increasing internet speed

Ans: B Troubleshooting and diagnosing system problems with minimal drivers/services loaded. This is a commonly cited practical application of MS-Windows.

Q325 Application **MS-Windows**

The address bar feature in Windows File Explorer allows users to:

A. Navigate directly to a specific folder or drive path

B. Change the desktop wallpaper

C. Manage user accounts

D. Format the hard disk

Ans: A Navigate directly to a specific folder or drive path. This reflects how MS-Windows is actually used in practice.

Section 4: COMPARATIVE STUDY

90 Multiple-Choice Questions | Each question includes the correct answer and a short explanation

MS-DOS vs UNIX

Q326 Comparison **Comparative Study**

Unlike MS-DOS, UNIX supports:

A. Single-user operation only

B. Multiple simultaneous users

C. No file system at all

D. No command line at all

Ans: B Multiple simultaneous users. This is the key distinguishing point in MS-DOS vs UNIX.

Q327 Comparison **Comparative Study**

Both MS-DOS and UNIX primarily provide which type of user interface by default?

A. Graphical User Interface

B. Command Line Interface

C. Touch Interface

D. Voice Interface

Ans: B Command Line Interface. This is the key distinguishing point in MS-DOS vs UNIX.

Q328 Comparison **Comparative Study**

Compared with MS-DOS, UNIX offers which additional capability?

A. True multitasking of multiple processes

B. Inability to run more than one program

C. No process management at all

D. No multiuser support

Ans: A True multitasking of multiple processes. This is the key distinguishing point in MS-DOS vs UNIX.

Q329 Comparison **Comparative Study**

MS-DOS file names traditionally follow the 8.3 naming convention, whereas UNIX:

A. Also strictly limits names to 8.3 format

B. Generally allows longer, more flexible file names

C. Does not allow file names at all

D. Requires numeric file names only

Ans: B Generally allows longer, more flexible file names. This is the key distinguishing point in MS-DOS vs UNIX.

Q330 Comparison **Comparative Study**

Regarding case sensitivity, MS-DOS file names are generally case-insensitive, while UNIX file names are:

A. Also case-insensitive

B. Case-sensitive

C. Numeric only

D. Always uppercase

Ans: B Case-sensitive. This is the key distinguishing point in MS-DOS vs UNIX.

Q331 Comparison **Comparative Study**

Which best describes the original target hardware for MS-DOS versus UNIX?

A. MS-DOS for personal computers; UNIX originally for minicomputers/mainframes

B. UNIX for personal computers; MS-DOS for mainframes

C. Both exclusively for mainframes

D. Both exclusively for personal computers

Ans: A MS-DOS for personal computers; UNIX originally for minicomputers/mainframes. This is the key distinguishing point in MS-DOS vs UNIX.

Q332 Comparison **Comparative Study**

Compared with MS-DOS's single-tasking nature, UNIX's multitasking allows:

A. Only one process at a time

B. Multiple processes to run concurrently, sharing CPU time

C. No processes to run at all

D. Disabling of all background tasks

Ans: B Multiple processes to run concurrently, sharing CPU time. This is the key distinguishing point in MS-DOS vs UNIX.

Q333 Comparison **Comparative Study**

In terms of file permission systems, MS-DOS generally has:

A. A robust owner/group/others permission model like UNIX

B. Very limited built-in file permission/security features compared to UNIX

C. No concept of files at all

D. An identical permission system to UNIX

Ans: B Very limited built-in file permission/security features compared to UNIX. This is the key distinguishing point in MS-DOS vs UNIX.

Q334 Comparison **Comparative Study**

Both MS-DOS and UNIX use a similar symbol for command output redirection. Which symbol is this?

A. Two completely different and incompatible symbols

B. The ">" symbol, used similarly to redirect output to a file

C. Neither supports redirection

D. Only UNIX supports redirection

Ans: B The ">" symbol, used similarly to redirect output to a file. This is the key distinguishing point in MS-DOS vs UNIX.

Q335 Comparison **Comparative Study**

Native networking support was historically more integral to which of the two systems?

A. MS-DOS, by default

B. UNIX, which was developed with strong networking and multiuser capabilities

C. Neither system supported any networking

D. Both had identical built-in networking from release

Ans: B UNIX, which was developed with strong networking and multiuser capabilities. This is the key distinguishing point in MS-DOS vs UNIX.

Q336 Comparison **Comparative Study**

Compared with UNIX's hierarchical directory structure, MS-DOS:

A. Uses a completely flat, non-hierarchical structure

B. Also uses a hierarchical (tree-structured) directory system

C. Has no directories at all

D. Uses a circular directory structure

Ans: B Also uses a hierarchical (tree-structured) directory system. This is the key distinguishing point in MS-DOS vs UNIX.

Q337 Comparison **Comparative Study**

A key difference in command interpreters: MS-DOS uses COMMAND.COM, while UNIX commonly uses:

A. A shell such as sh, bash, or csh

B. COMMAND.COM as well

C. No command interpreter at all

D. Only GUI menus

Ans: A A shell such as sh, bash, or csh. This is the key distinguishing point in MS-DOS vs UNIX.

Q338 Comparison **Comparative Study**

Regarding portability, UNIX is often praised for being portable across hardware platforms, whereas MS-DOS was:

A. Equally portable across all types of hardware

B. More closely tied to IBM-compatible PC hardware architecture

C. Designed exclusively for mainframes

D. Never tied to any specific hardware

Ans: B More closely tied to IBM-compatible PC hardware architecture. This is the key distinguishing point in MS-DOS vs UNIX.

Q339 Comparison **Comparative Study**

Which system is generally considered more suitable for a single home PC user performing simple tasks?

A. MS-DOS, due to simplicity and low resource needs

B. UNIX exclusively

C. Neither system

D. Both equally unsuitable

Ans: A MS-DOS, due to simplicity and low resource needs. This is the key distinguishing point in MS-DOS vs UNIX.

Q340 Comparison **Comparative Study**

Which system is generally considered more suitable for multiuser business/server environments requiring concurrent access?

A. MS-DOS

B. UNIX

C. Neither system

D. Both equally unsuitable

Ans: B UNIX. This is the key distinguishing point in MS-DOS vs UNIX.

Q341 Comparison **Comparative Study**

Both MS-DOS and UNIX commands can be grouped using a similar categorization. What is this categorization?

A. Internal/built-in commands versus external commands

B. GUI-only commands

C. No such categorization exists in either system

D. Only graphical commands

Ans: A Internal/built-in commands versus external commands. This is the key distinguishing point in MS-DOS vs UNIX.

Q342 Comparison **Comparative Study**

Compared with UNIX's use of pipes (|) to connect commands, MS-DOS:

A. Has no equivalent feature at all

B. Also supports a similar piping mechanism using the | symbol

C. Only supports piping through a GUI

D. Cannot run more than one command ever

Ans: B Also supports a similar piping mechanism using the | symbol. This is the key distinguishing point in MS-DOS vs UNIX.

Q343 Comparison **Comparative Study**

In terms of stability for long-running, uninterrupted operation, which is traditionally regarded as stronger?

A. MS-DOS, due to its simplicity

B. UNIX, due to its multiuser, multitasking, and robust process management design

C. Both are identical in this respect

D. Neither addresses stability at all

Ans: B UNIX, due to its multiuser, multitasking, and robust process management design. This is the key distinguishing point in MS-DOS vs UNIX.

Q344 Comparison **Comparative Study**

Regarding device representation, UNIX commonly treats devices as special files, whereas MS-DOS:

A. Uses an identical special-file device model

B. Uses separate device names/drivers rather than the UNIX-style file model

C. Has no concept of devices at all

D. Cannot interact with hardware at all

Ans: B Uses separate device names/drivers rather than the UNIX-style file model. This is the key distinguishing point in MS-DOS vs UNIX.

Q345 Comparison **Comparative Study**

Considering boot files, MS-DOS commonly relies on IO.SYS, MSDOS.SYS, and COMMAND.COM, while UNIX relies on:

A. A kernel and an initial process such as init

B. The exact same three files as MS-DOS

C. No boot process at all

D. Only a Registry file

Ans: A A kernel and an initial process such as init. This is the key distinguishing point in MS-DOS vs UNIX.

UNIX vs MS-WINDOWS

Q346 Comparison **Comparative Study**

Unlike the primarily graphical default interface of MS-Windows, the traditional default interface of UNIX is:

A. Graphical only, with no command-line option

B. Primarily command-line based (with GUI environments optionally layered on top)

C. Touch-based

D. Voice-based

Ans: B Primarily command-line based (with GUI environments optionally layered on top). This is the key distinguishing point in UNIX vs MS-Windows.

Q347 Comparison **Comparative Study**

Both UNIX and MS-Windows support which similar concept, although implemented differently?

A. Neither supports multiple user accounts

B. User accounts with permission/access control mechanisms

C. Only single accounts with no separation

D. No concept of users at all

Ans: B User accounts with permission/access control mechanisms. This is the key distinguishing point in UNIX vs MS-Windows.

Q348 Comparison **Comparative Study**

Regarding licensing, many UNIX-derived systems differ from MS-Windows in that:

A. Windows is generally open-source and free, unlike UNIX variants

B. Some UNIX/Unix-like systems are open-source, while MS-Windows is proprietary commercial software

C. Both are always entirely free of charge

D. Neither has any licensing model at all

Ans: B Some UNIX/Unix-like systems are open-source, while MS-Windows is proprietary commercial software. This is the key distinguishing point in UNIX vs MS-Windows.

Q349 Comparison **Comparative Study**

Compared with MS-Windows' graphical Control Panel/Settings, UNIX administrators traditionally manage system configuration mainly through:

A. An identical graphical Control Panel tool only

B. Configuration files and command-line tools (though GUI tools exist in many Unix-like distributions)

C. No configuration is possible at all

D. Voice commands

Ans: B Configuration files and command-line tools (though GUI tools exist in many Unix-like distributions). This is the key distinguishing point in UNIX vs MS-Windows.

Q350 Comparison **Comparative Study**

File name case sensitivity differs in that UNIX is typically case-sensitive, while MS-Windows file systems are commonly:

A. Also strictly case-sensitive in the same way

B. Case-insensitive (though case-preserving) for typical use

C. Numeric only

D. Case-sensitive only for folder names

Ans: B Case-insensitive (though case-preserving) for typical use. This is the key distinguishing point in UNIX vs MS-Windows.

Q351 Comparison **Comparative Study**

Both UNIX and MS-Windows provide multitasking; however, a notable historical strength of UNIX in server contexts is its:

A. Lack of multiuser support

B. Long-established reputation for stability and efficient resource handling on servers

C. Requirement of a GUI for all operations

D. Inability to run background processes

Ans: B Long-established reputation for stability and efficient resource handling on servers. This is the key distinguishing point in UNIX vs MS-Windows.

Q352 Comparison **Comparative Study**

Regarding hardware requirements, UNIX (especially minimal/server variants) is often considered to be:

A. Always requiring far more resources than Windows

B. Capable of running efficiently with comparatively lower resource overhead in minimal configurations than a full GUI-heavy Windows install

C. Identical in resource needs in all cases

D. Incapable of running without a GUI

Ans: B Capable of running efficiently with comparatively lower resource overhead in minimal configurations than a full GUI-heavy Windows install. This is the key distinguishing point in UNIX vs MS-Windows.

Q353 Comparison **Comparative Study**

Both UNIX and Windows organize files into directories/folders, but UNIX's structure starts at "/" while Windows commonly uses:

A. Drive letters such as C:\

B. No starting point at all

C. The same "/" symbol identically

D. Only network paths

Ans: A Drive letters such as C:\. This is the key distinguishing point in UNIX vs MS-Windows.

Q354 Comparison **Comparative Study**

Which system has historically had a steeper learning curve for new computer users due to its reliance on commands?

A. MS-Windows, due to its GUI orientation

B. UNIX, due to its traditional command-line orientation

C. Neither has any learning curve

D. Both are identical in ease of use

Ans: B UNIX, due to its traditional command-line orientation. This is the key distinguishing point in UNIX vs MS-Windows.

Q355 Comparison **Comparative Study**

In terms of commercial desktop software and game compatibility for everyday consumer use, which platform has traditionally had broader support?

A. UNIX

B. MS-Windows

C. Neither

D. Both identical

Ans: B MS-Windows. This is the key distinguishing point in UNIX vs MS-Windows.

Q356 Comparison **Comparative Study**

Regarding process monitoring, Windows uses a GUI-based Task Manager, while UNIX traditionally uses which approach?

A. Command-line tools like ps and top (alongside optional GUI tools in many distributions)

B. No way to monitor processes at all

C. Only physical indicator lights

D. Voice commands only

Ans: A Command-line tools like ps and top (alongside optional GUI tools in many distributions). This is the key distinguishing point in UNIX vs MS-Windows.

Q357 Comparison **Comparative Study**

Compared with Windows' Recycle Bin, UNIX traditionally:

A. Has an identical built-in Recycle Bin behavior by default at the command-line level

B. Does not have a universal command-line "Recycle Bin" by default; files removed with rm are typically deleted without an automatic recovery stage

C. Cannot delete files at all

D. Has no delete command at all

Ans: B Does not have a universal command-line "Recycle Bin" by default; files removed with rm are typically deleted without an automatic recovery stage. This is the key distinguishing point in UNIX vs MS-Windows.

Q358 Comparison **Comparative Study**

Both UNIX and Windows support running background processes, but Windows commonly manages this visually through:

A. Task Manager and system tray icons

B. No mechanism at all

C. Physical switches

D. Only the BIOS

Ans: A Task Manager and system tray icons. This is the key distinguishing point in UNIX vs MS-Windows.

Q359 Comparison **Comparative Study**

UNIX's traditional permission model (read/write/execute for owner/group/others) compares to Windows' approach, which:

A. Has no permission system at all

B. Uses its own access control model (such as NTFS permissions) serving a similar purpose with different implementation details

C. Is identical line-by-line to UNIX permissions

D. Cannot restrict file access in any way

Ans: B Uses its own access control model (such as NTFS permissions) serving a similar purpose with different implementation details. This is the key distinguishing point in UNIX vs MS-Windows.

Q360 Comparison **Comparative Study**

UNIX has traditionally been associated more with servers and technical/scientific computing, while MS-Windows has been associated more with:

A. Exclusively supercomputing clusters

B. General-purpose desktop and business computing for a broad consumer base

C. Only embedded microcontrollers

D. Only mainframes

Ans: B General-purpose desktop and business computing for a broad consumer base. This is the key distinguishing point in UNIX vs MS-Windows.

Q361 Comparison **Comparative Study**

Regarding scripting/automation, both systems support it, but UNIX shell scripting is traditionally considered:

A. Less powerful than Windows batch files in every respect

B. A long-standing, powerful, and flexible tool for automation, foundational in OS scripting history

C. Impossible to perform on UNIX

D. Only usable through a GUI

Ans: B A long-standing, powerful, and flexible tool for automation, foundational in OS scripting history. This is the key distinguishing point in UNIX vs MS-Windows.

Q362 Comparison **Comparative Study**

Both UNIX and MS-Windows can host network servers, but UNIX (and Unix-like systems) historically gained early prominence in:

A. Early internet infrastructure and server deployments

B. Personal gaming consoles only

C. Children's educational toys only

D. Analog telephone exchanges

Ans: A Early internet infrastructure and server deployments. This is the key distinguishing point in UNIX vs MS-Windows.

Q363 Comparison **Comparative Study**

Compared with Windows' single dominant vendor (Microsoft), the UNIX ecosystem historically featured:

A. A single vendor controlling all versions identically

B. Multiple vendors and variants, leading to some fragmentation across commercial and open derivatives

C. No vendors at all

D. Completely identical behavior across all implementations

Ans: B Multiple vendors and variants, leading to some fragmentation across commercial and open derivatives. This is the key distinguishing point in UNIX vs MS-Windows.

Q364 Comparison **Comparative Study**

Which statement best compares default end-user friendliness for non-technical users?

A. UNIX is generally easier for non-technical beginners than Windows

B. MS-Windows' GUI is generally considered more approachable for non-technical beginners than a traditional command-line UNIX environment

C. Both are identically friendly

D. Neither can be used by beginners

Ans: B MS-Windows' GUI is generally considered more approachable for non-technical beginners than a traditional command-line UNIX environment. This is the key distinguishing point in UNIX vs MS-Windows.

Q365 Comparison **Comparative Study**

Regarding device interaction, UNIX commonly represents devices as files under /dev, while Windows commonly represents devices through:

A. The exact same /dev file convention

B. Device Manager and driver-based abstractions rather than the UNIX-style file convention

C. No device representation at all

D. Punch cards

Ans: B Device Manager and driver-based abstractions rather than the UNIX-style file convention. This is the key distinguishing point in UNIX vs MS-Windows.

MS-DOS vs MS-WINDOWS

Q366 Comparison **Comparative Study**

The key interface difference between MS-DOS and MS-Windows is that MS-DOS is command-line based while MS-Windows is:

A. Also strictly command-line based with no graphics

B. Primarily graphical (GUI) based

C. Voice-based only

D. Touch-only

Ans: B Primarily graphical (GUI) based. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q367 Comparison **Comparative Study**

Early Windows versions (3.x) differed from pure MS-DOS in that they:

A. Replaced MS-DOS entirely with no dependency on it

B. Ran as a graphical environment/shell on top of MS-DOS

C. Had no graphical elements at all

D. Used UNIX as their base

Ans: B Ran as a graphical environment/shell on top of MS-DOS. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q368 Comparison **Comparative Study**

Regarding multitasking, MS-DOS is single-tasking while MS-Windows is:

A. Also strictly single-tasking

B. Multitasking, allowing multiple applications to run simultaneously

C. Incapable of running any application

D. Single-user only with no tasking

Ans: B Multitasking, allowing multiple applications to run simultaneously. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q369 Comparison **Comparative Study**

On file naming, MS-DOS restricts names to the 8.3 format, while modern MS-Windows generally:

A. Also strictly limits names to 8.3 format

B. Supports much longer, more descriptive file names

C. Disallows file extensions entirely

D. Requires numeric names only

Ans: B Supports much longer, more descriptive file names. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q370 Comparison **Comparative Study**

In terms of hardware resource requirements, MS-DOS generally requires:

A. Significantly more memory and processing power than modern MS-Windows

B. Far less memory and processing power than modern graphical MS-Windows versions

C. Identical resources to modern Windows

D. No resources at all

Ans: B Far less memory and processing power than modern graphical MS-Windows versions. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q371 Comparison **Comparative Study**

Regarding device installation, modern MS-Windows commonly supports Plug and Play, while MS-DOS:

A. Also fully supports automatic Plug and Play in the same way

B. Generally required more manual configuration of hardware/drivers

C. Has no concept of hardware at all

D. Automatically configures all devices without any drivers

Ans: B Generally required more manual configuration of hardware/drivers. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q372 Comparison **Comparative Study**

Which system uses icons and windows as a core interaction method?

A. MS-DOS

B. MS-Windows

C. Neither system

D. Both equally

Ans: B MS-Windows. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q373 Comparison **Comparative Study**

Which system relies primarily on typed text commands as the core interaction method?

A. MS-Windows exclusively

B. MS-DOS

C. Neither system

D. Both equally rely on typed commands only

Ans: B MS-DOS. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q374 Comparison **Comparative Study**

In historical development, MS-Windows can be considered an evolution that eventually moved beyond reliance on which earlier Microsoft OS?

A. UNIX

B. MS-DOS

C. CP/M only

D. Linux

Ans: B MS-DOS. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q375 Comparison **Comparative Study**

Regarding file systems, MS-DOS commonly used FAT, while modern MS-Windows commonly uses:

A. The exact same FAT system with no changes

B. NTFS, which offers more advanced features like permissions and larger file support

C. No file system at all

D. ext4

Ans: B NTFS, which offers more advanced features like permissions and larger file support. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q376 Comparison **Comparative Study**

The use of a mouse as a primary input device is closely associated with which of the two systems?

A. MS-DOS

B. MS-Windows

C. Neither system

D. Both equally

Ans: B MS-Windows. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q377 Comparison **Comparative Study**

The Recycle Bin feature for recovering deleted files is a characteristic of:

A. MS-DOS

B. MS-Windows

C. Neither system

D. Both identically

Ans: B MS-Windows. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q378 Comparison **Comparative Study**

The command interpreter COMMAND.COM is associated primarily with:

A. MS-Windows (modern NT-based versions) exclusively

B. MS-DOS (and legacy command prompt heritage)

C. Neither system

D. UNIX

Ans: B MS-DOS (and legacy command prompt heritage). This is the key distinguishing point in MS-DOS vs MS-Windows.

Q379 Comparison **Comparative Study**

Multiple application windows open and arranged on screen simultaneously is a hallmark feature of:

A. MS-DOS

B. MS-Windows

C. Neither system

D. Both equally

Ans: B MS-Windows. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q380 Comparison **Comparative Study**

For a complete beginner with no technical background, which system is generally considered more approachable?

A. MS-DOS, due to its command-line simplicity

B. MS-Windows, due to its graphical, icon-driven interface

C. Both equally difficult

D. Neither can be learned

Ans: B MS-Windows, due to its graphical, icon-driven interface. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q381 Comparison **Comparative Study**

Batch files (.bat) used for automating command sequences originated with MS-DOS and:

A. Have no equivalent or continuation in Windows

B. Continue to be supported and used within the Windows command prompt environment

C. Were completely removed in all Windows versions

D. Only work in UNIX

Ans: B Continue to be supported and used within the Windows command prompt environment. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q382 Comparison **Comparative Study**

Regarding networking and internet capabilities, modern MS-Windows offers built-in robust networking support, whereas base MS-DOS:

A. Also includes full built-in modern networking and internet browsing by default

B. Had very limited native networking/internet capability without additional add-on software

C. Has identical networking capability to modern Windows

D. Cannot run any software at all

Ans: B Had very limited native networking/internet capability without additional add-on software. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q383 Comparison **Comparative Study**

The taskbar and Start menu are features found in:

A. MS-DOS

B. MS-Windows

C. Neither system

D. Both equally

Ans: B MS-Windows. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q384 Comparison **Comparative Study**

Which of the two systems is generally considered the direct historical predecessor in Microsoft's product line?

A. MS-Windows influenced MS-DOS

B. MS-DOS came first and influenced/underpinned early MS-Windows versions

C. They were developed completely independently with no relation

D. UNIX influenced both equally and exclusively

Ans: B MS-DOS came first and influenced/underpinned early MS-Windows versions. This is the key distinguishing point in MS-DOS vs MS-Windows.

Q385 Comparison **Comparative Study**

For modern multimedia tasks like video playback and graphic design, which system is generally better suited?

A. MS-DOS

B. MS-Windows

C. Neither system

D. Both equally suited

Ans: B MS-Windows. This is the key distinguishing point in MS-DOS vs MS-Windows.

General Comparison & Mixed

Q386 Comparison **Comparative Study**

Among MS-DOS, UNIX, and MS-Windows, which is/are capable of true multiuser operation?

A. MS-DOS only

B. UNIX (and multiuser-capable Windows server-type editions, though classic desktop Windows defaults to a single active session)

C. None of them

D. Only MS-Windows desktop editions

Ans: B UNIX (and multiuser-capable Windows server-type editions, though classic desktop Windows defaults to a single active session). This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q387 Comparison **Comparative Study**

Among the three systems, which is generally regarded as having the steepest learning curve for an absolute beginner?

A. MS-Windows

B. UNIX, due to its command-line orientation

C. Neither has a learning curve

D. All three are equally easy

Ans: B UNIX, due to its command-line orientation. This correctly distinguishes the operating systems on this point.

Q388 Comparison **Comparative Study**

Which of the three operating systems is most closely associated with a graphical, icon-and-mouse-driven default user experience?

A. MS-DOS

B. UNIX (traditional)

C. MS-Windows

D. None of them

Ans: C MS-Windows. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q389 Comparison **Comparative Study**

Which of the three is most closely associated with being the foundational basis for the modern open-source operating system Linux?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of them

Ans: B UNIX. This correctly distinguishes the operating systems on this point.

Q390 Comparison **Comparative Study**

Which of the three traditionally lacked native support for running more than one program at a time?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of them

Ans: A MS-DOS. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q391 Comparison **Comparative Study**

Assertion (A): MS-DOS, UNIX, and MS-Windows are all examples of operating systems. Reason (R): An operating system manages computer hardware and software resources and provides services for computer programs.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. This correctly distinguishes the operating systems on this point.

Q392 Comparison **Comparative Study**

Assertion (A): All three operating systems (MS-DOS, UNIX, MS-Windows) provide identical user interfaces. Reason (R): MS-DOS uses a CLI, UNIX traditionally uses a CLI (with optional GUI), and MS-Windows uses a GUI by default.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is false, but R is true

D. Both A and R are false

Ans: C A is false, but R is true. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q393 Comparison **Comparative Study**

Assertion (A): UNIX and MS-Windows both support multitasking. Reason (R): Both operating systems allow multiple processes/applications to execute and be managed concurrently.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. This correctly distinguishes the operating systems on this point.

Q394 Comparison **Comparative Study**

Assertion (A): MS-DOS is generally less resource-intensive than MS-Windows. Reason (R): MS-DOS lacks a full graphical interface and the advanced multitasking overhead present in MS-Windows.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q395 Comparison **Comparative Study**

Assertion (A): UNIX's multiuser capability makes it well-suited for shared server environments. Reason (R): UNIX allows multiple users to log in, each with separate accounts and permissions, sharing system resources simultaneously.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. This correctly distinguishes the operating systems on this point.

Q396 Comparison **Comparative Study**

Which of the three operating systems would be LEAST suitable for a user wanting a visually rich, mouse-driven desktop experience without learning any commands?

A. MS-Windows

B. MS-DOS and traditional UNIX, since both are primarily command-driven

C. Neither, both are GUI-only

D. All three are equally suitable

Ans: B MS-DOS and traditional UNIX, since both are primarily command-driven. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q397 Comparison **Comparative Study**

Which statement correctly compares all three systems' interface styles?

A. MS-DOS, UNIX, and MS-Windows are all GUI-only systems

B. MS-DOS and traditional UNIX are primarily command-line based, while MS-Windows is primarily GUI-based

C. All three require an active internet connection to function

D. None of the three can run more than one command ever

Ans: B MS-DOS and traditional UNIX are primarily command-line based, while MS-Windows is primarily GUI-based. This correctly distinguishes the operating systems on this point.

Q398 Comparison **Comparative Study**

Which of the three systems historically required the LEAST amount of RAM to operate?

A. MS-Windows (modern versions)

B. MS-DOS

C. A full UNIX graphical workstation variant

D. All three require identical RAM

Ans: B MS-DOS. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q399 Comparison **Comparative Study**

Considering historical timeline, which option correctly orders the broad origin of the three systems from earliest to latest?

A. MS-Windows, MS-DOS, UNIX

B. UNIX, MS-DOS, MS-Windows

C. MS-DOS, UNIX, MS-Windows

D. MS-Windows, UNIX, MS-DOS

Ans: B UNIX, MS-DOS, MS-Windows. This correctly distinguishes the operating systems on this point.

Q400 Comparison **Comparative Study**

Match the operating system with its most defining characteristic: (1) MS-DOS (2) UNIX (3) MS-Windows -- (a) Default GUI for general consumers (b) Single-user, single-tasking, command-line (c) Traditional multiuser, multitasking, command-line, server-oriented

A. 1-b, 2-c, 3-a

B. 1-a, 2-b, 3-c

C. 1-c, 2-a, 3-b

D. 1-b, 2-a, 3-c

Ans: A 1-b, 2-c, 3-a. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q401 Comparison **Comparative Study**

Which of the three operating systems is generally considered most appropriate for an organization needing many employees to log in to one central server concurrently?

A. MS-DOS

B. UNIX

C. MS-Windows (classic single-session desktop edition)

D. None of them can support this

Ans: B UNIX. This correctly distinguishes the operating systems on this point.

Q402 Comparison **Comparative Study**

Which of the three operating systems is generally considered most appropriate for a home user who wants to browse the web, edit documents, and play games using a mouse and icons?

A. MS-DOS

B. Traditional UNIX (CLI)

C. MS-Windows

D. None of them

Ans: C MS-Windows. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q403 Comparison **Comparative Study**

Which of the three operating systems traditionally has the simplest, most minimal command set and feature scope?

A. MS-DOS

B. UNIX

C. MS-Windows

D. All three are equally complex

Ans: A MS-DOS. This correctly distinguishes the operating systems on this point.

Q404 Comparison **Comparative Study**

Considering file system permission models, which pairing correctly reflects relatively stronger built-in multiuser file security?

A. MS-DOS has stronger permissions than UNIX

B. UNIX traditionally has a more robust multiuser permission model than basic MS-DOS

C. MS-DOS and UNIX have identical permission models

D. Neither has any permission model

Ans: B UNIX traditionally has a more robust multiuser permission model than basic MS-DOS. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q405 Comparison **Comparative Study**

Which of the three systems is most associated with the historical evolution: command-line only, then a graphical shell layered on top, then a fully integrated graphical OS?

A. UNIX alone

B. This evolution broadly reflects MS-DOS leading into early MS-Windows (3.x) leading into modern MS-Windows

C. MS-DOS alone, with no evolution

D. None of the three reflect this evolution

Ans: B This evolution broadly reflects MS-DOS leading into early MS-Windows (3.x) leading into modern MS-Windows. This correctly distinguishes the operating systems on this point.

Q406 Comparison **Comparative Study**

Match the typical default target users: (1) MS-DOS (2) UNIX (3) MS-Windows -- (a) general home/business consumers (b) technical/server administrators and multiuser environments (c) early single-user PC users needing basic functionality

A. 1-c, 2-b, 3-a

B. 1-a, 2-b, 3-c

C. 1-b, 2-c, 3-a

D. 1-c, 2-a, 3-b

Ans: A 1-c, 2-b, 3-a. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q407 Comparison **Comparative Study**

Which statement correctly contrasts the typical default number of concurrent logged-in users supported by MS-DOS versus UNIX?

A. MS-DOS supports many concurrent users; UNIX supports only one

B. MS-DOS supports only one user at a time; UNIX is designed to support multiple concurrent users

C. Both support unlimited simultaneous users identically

D. Neither supports any users

Ans: B MS-DOS supports only one user at a time; UNIX is designed to support multiple concurrent users. This correctly distinguishes the operating systems on this point.

Q408 Comparison **Comparative Study**

Which statement correctly contrasts the typical default interaction style across all three operating systems?

A. MS-DOS: text commands; UNIX (traditional): text commands; MS-Windows: graphical icons/windows

B. MS-DOS: graphical; UNIX: graphical; MS-Windows: text-only

C. All three use voice commands only

D. All three use identical touchscreen-only interaction

Ans: A MS-DOS: text commands; UNIX (traditional): text commands; MS-Windows: graphical icons/windows. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q409 Comparison **Comparative Study**

For running specific commercial desktop applications and games developed for IBM-PC architecture in the 1990s-2000s, which OS generally has the broadest compatibility?

A. UNIX

B. MS-Windows

C. MS-DOS alone (in the modern era)

D. None support such software

Ans: B MS-Windows. This correctly distinguishes the operating systems on this point.

Q410 Comparison **Comparative Study**

Which of the three is most strongly associated with being implemented by multiple different vendors over its history, unlike a single unified vendor product?

A. MS-DOS

B. MS-Windows

C. UNIX

D. None of them

Ans: C UNIX. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q411 Comparison **Comparative Study**

Which of the three operating systems most commonly uses the specific term "kernel" in standard OS literature to describe its core hardware-managing component?

A. MS-DOS exclusively uses this term in common usage

B. UNIX (and, by extension, the NT-based Windows family) commonly use the term "kernel" for the core OS component

C. None of the three has a kernel concept

D. Only MS-Windows uses this term

Ans: B UNIX (and, by extension, the NT-based Windows family) commonly use the term "kernel" for the core OS component. This correctly distinguishes the operating systems on this point.

Q412 Comparison **Comparative Study**

Which option best completes: "___ is associated with command-line simplicity for a single PC user, ___ is associated with graphical ease-of-use for general consumers, and ___ is associated with multiuser command-driven robustness for servers."

A. MS-DOS; MS-Windows; UNIX

B. UNIX; MS-DOS; MS-Windows

C. MS-Windows; UNIX; MS-DOS

D. MS-DOS; UNIX; MS-Windows

Ans: A MS-DOS; MS-Windows; UNIX. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q413 Comparison **Comparative Study**

Which statement is generally TRUE when comparing licensing approaches across the three systems?

A. MS-DOS and MS-Windows are both proprietary Microsoft products, whereas the UNIX family includes both proprietary commercial variants and open-source Unix-like derivatives

B. All three are completely open-source

C. All three are completely proprietary, with no exceptions

D. None of the three has ever been licensed

Ans: A MS-DOS and MS-Windows are both proprietary Microsoft products, whereas the UNIX family includes both proprietary commercial variants and open-source Unix-like derivatives. This correctly distinguishes the operating systems on this point.

Q414 Comparison **Comparative Study**

Which statement is generally TRUE when comparing typical default boot/loading components?

A. MS-DOS boots via IO.SYS/MSDOS.SYS/COMMAND.COM; UNIX boots via a kernel and an init process; MS-Windows (NT-based) boots via a boot manager and NTOSKRNL.EXE

B. All three use identical boot files with identical names

C. None of the three has any boot process

D. Only UNIX has a boot process

Ans: A MS-DOS boots via IO.SYS/MSDOS.SYS/COMMAND.COM; UNIX boots via a kernel and an init process; MS-Windows (NT-based) boots via a boot manager and NTOSKRNL.EXE. This is the correct point of comparison among MS-DOS, UNIX, and MS-Windows here.

Q415 Comparison **Comparative Study**

Which of the three operating systems is generally recommended to study first when learning fundamental command-line concepts due to its simplicity?

A. MS-Windows GUI only

B. MS-DOS, due to its simple and limited command set ideal for beginners learning CLI basics

C. None are suitable for learning basic concepts

D. Only complex UNIX shell scripting

Ans: B MS-DOS, due to its simple and limited command set ideal for beginners learning CLI basics. This correctly distinguishes the operating systems on this point.

Section 5: MIXED PRACTICE QUESTIONS

88 Multiple-Choice Questions | Each question includes the correct answer and a short explanation

Identify the Operating System

Q416 Recall **Mixed Practice**

Which OS is most associated with the 8.3 file naming convention?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q417 Recall **Mixed Practice**

Which OS was developed at Bell Labs (AT&T)?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q418 Recall **Mixed Practice**

Which OS is best known for its Start menu and Taskbar?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q419 Recall **Mixed Practice**

Which OS traditionally uses the "ls" command to list files?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q420 Recall **Mixed Practice**

Which OS traditionally uses the "DIR" command to list files?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q421 Recall **Mixed Practice**

Which OS commonly uses NTFS as a modern file system?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q422 Recall **Mixed Practice**

Which OS traditionally used the FAT file system?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q423 Recall **Mixed Practice**

Which OS was designed from the start with multiuser capability as a core feature?

A. MS-DOS

B. UNIX

C. MS-Windows (classic desktop)

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q424 Recall **Mixed Practice**

Which OS is single-user and single-tasking by design?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q425 Recall **Mixed Practice**

Which OS uses "man" pages for command documentation?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q426 Recall **Mixed Practice**

Which OS provides a Control Panel for changing system settings?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q427 Recall **Mixed Practice**

In which OS are process identifiers commonly called PIDs?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q428 Recall **Mixed Practice**

Which OS provides a Task Manager utility?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q429 Recall **Mixed Practice**

Which OS uses CONFIG.SYS and AUTOEXEC.BAT during boot?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q430 Recall **Mixed Practice**

Which OS pairs a kernel with a shell such as sh, bash, or csh?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q431 Recall Mixed Practice

Which OS uses a Registry to store system and application configuration settings?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q432 Recall Mixed Practice

Which OS was largely written in the C programming language to enhance portability?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q433 Recall Mixed Practice

Which early Microsoft OS ran as a graphical shell on top of another operating system?

A. Early MS-Windows (3.x), on top of MS-DOS

B. UNIX, on top of MS-Windows

C. MS-DOS, on top of UNIX

D. None of these

Ans: A This is correctly associated with Early MS-Windows (3.x), on top of MS-DOS, and not with the other operating systems covered in this syllabus.

Q434 Recall Mixed Practice

Which OS uses the "chmod" command to change file permissions?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q435 Recall Mixed Practice

Which OS uses the "ATTRIB" command to change file attributes?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q436 Recall Mixed Practice

Which OS is associated with Plug and Play automatic hardware detection as a defining consumer feature?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q437 Recall **Mixed Practice**

Which OS is considered the historical foundation that inspired the open-source Linux operating system?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q438 Recall **Mixed Practice**

Which OS is best known for drag-and-drop, icon-based file management?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q439 Recall **Mixed Practice**

Which OS historically used the "FORMAT" command as a core built-in disk preparation command?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q440 Recall **Mixed Practice**

Which OS commonly runs background "daemon" processes?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q441 Recall **Mixed Practice**

Which OS uses explorer.exe to manage the desktop shell experience?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q442 Recall **Mixed Practice**

Which OS uses "XCOPY" to copy entire directory structures?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q443 Recall Mixed Practice

Which OS commonly offers shells such as the Bourne shell, C shell, and Korn shell?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q444 Recall Mixed Practice

Which OS(s) traditionally treat file names as case-insensitive?

A. UNIX only

B. MS-DOS and MS-Windows

C. UNIX and MS-Windows

D. None of them

Ans: B This is correctly associated with MS-DOS and MS-Windows, and not with the other operating systems covered in this syllabus.

Q445 Recall Mixed Practice

Which OS treats file names as case-sensitive by default?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q446 Recall **Mixed Practice**

Which OS commonly uses the "/" symbol as the root of its directory structure?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q447 Recall **Mixed Practice**

Which OS(s) commonly use drive letters like "C:\" as the root of their directory structure?

A. MS-DOS and MS-Windows

B. UNIX only

C. Neither

D. All three identically

Ans: A This is correctly associated with MS-DOS and MS-Windows, and not with the other operating systems covered in this syllabus.

Q448 Recall **Mixed Practice**

Which OS uses COMMAND.COM as its command interpreter?

A. MS-DOS

B. UNIX

C. MS-Windows (modern NT-based)

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q449 Recall **Mixed Practice**

Which OS's GUI shell process is responsible for the taskbar and desktop icons?

A. MS-DOS

B. UNIX (traditional)

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q450 Recall **Mixed Practice**

Which OS most commonly pairs "kernel" and "shell" as standard architectural terms in basic OS textbooks?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q451 Recall **Mixed Practice**

Which OS family is most associated with free-of-charge, open-source community-developed variants?

A. MS-DOS

B. UNIX-like/open-source UNIX derivatives

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX-like/open-source UNIX derivatives, and not with the other operating systems covered in this syllabus.

Q452 Recall Mixed Practice

Which OS requires the least amount of memory/hardware resources to run, among the three covered?

A. MS-Windows (modern)

B. MS-DOS

C. A full graphical UNIX workstation

D. All require identical resources

Ans: B This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q453 Recall Mixed Practice

Which OS is most associated with the Recycle Bin feature?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q454 Recall Mixed Practice

Which OS is most associated with the "vi" text editor?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q455 Recall **Mixed Practice**

Which OS is most associated with the "EDIT" command-line text editor?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q456 Recall **Mixed Practice**

Which OS is most associated with "Notepad" as a default simple text editor?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q457 Recall **Mixed Practice**

Which OS is most associated with using the "&" symbol to run a process in the background?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q458 Recall Mixed Practice

Which OS is most associated with batch files having the ".bat" extension?

A. MS-DOS (continued in the MS-Windows command prompt)

B. UNIX

C. Neither

D. All three identically

Ans: A This is correctly associated with MS-DOS (continued in the MS-Windows command prompt), and not with the other operating systems covered in this syllabus.

Q459 Recall Mixed Practice

Which OS is most associated with shell scripts commonly written for automation in server administration?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q460 Recall Mixed Practice

Which OS commonly uses "ps" and "kill" commands together to manage processes?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q461 Recall Mixed Practice

Which OS is most associated with "Device Manager" for managing hardware drivers?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q462 Recall Mixed Practice

Which OS is most associated with making the WYSIWYG graphical editing concept mainstream for everyday users?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Q463 Recall Mixed Practice

Which OS is most closely associated with "time-sharing" as a foundational multiuser design concept?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B This is correctly associated with UNIX, and not with the other operating systems covered in this syllabus.

Q464 Recall **Mixed Practice**

Which OS is most associated with a basic command prompt offering no multitasking by design?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A This is correctly associated with MS-DOS, and not with the other operating systems covered in this syllabus.

Q465 Recall **Mixed Practice**

Which OS is most associated, historically, with being a frequent target for malware/viruses due to its dominant consumer market share?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C This is correctly associated with MS-Windows, and not with the other operating systems covered in this syllabus.

Scenario-Based Mixed Practice

Q466 Scenario **Mixed Practice**

A student needs to practice basic command-line file operations with minimal system requirements on an old computer. Which OS would be most appropriate to study?

A. MS-DOS

B. Modern MS-Windows

C. A heavy graphical UNIX workstation

D. None of these

Ans: A MS-DOS. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q467 Scenario **Mixed Practice**

A company needs to host a server allowing hundreds of employees to log in remotely and run programs concurrently. Which OS family is most historically suited for this?

A. MS-DOS

B. UNIX

C. A classic single-user desktop OS

D. None of these

Ans: B UNIX. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q468 Scenario **Mixed Practice**

A home user wants an easy-to-use system with icons, a mouse, and a Start menu for daily browsing and office work. Which OS is most suitable?

A. MS-DOS

B. Traditional UNIX (CLI)

C. MS-Windows

D. None of these

Ans: C MS-Windows. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q469 Scenario **Mixed Practice**

A technician is asked to recommend the most historically appropriate OS for a 1980s IBM-compatible personal computer with very limited memory. What should they recommend?

A. MS-DOS

B. A modern multiuser UNIX workstation OS

C. A modern MS-Windows version

D. None of these

Ans: A MS-DOS. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q470 Scenario **Mixed Practice**

A network engineer wants to understand the operating system most credited with shaping early internet server infrastructure. Which should they study?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B UNIX. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q471 Scenario **Mixed Practice**

A graphic designer wants an OS with strong support for visual, mouse-driven creative software, based on the topics covered. Which is most suitable?

A. MS-DOS

B. Traditional UNIX CLI

C. MS-Windows

D. None of these

Ans: C MS-Windows. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q472 Scenario **Mixed Practice**

A user needs to automate a repetitive sequence of file operations using simple scripts on an old single-user PC system. Which OS feature historically supports this directly?

A. MS-DOS batch files (.bat)

B. UNIX-only shell scripts

C. MS-Windows GUI only

D. None support automation

Ans: A MS-DOS batch files (.bat). This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q473 Scenario **Mixed Practice**

A system administrator wants to set fine-grained read/write/execute permissions for different users and groups on shared files. Which OS is most associated with this traditional capability?

A. MS-DOS

B. UNIX

C. Neither

D. Both equally limited

Ans: B UNIX. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q474 Scenario **Mixed Practice**

Which OS would be least appropriate to recommend to a non-technical user who refuses to learn any typed commands?

A. MS-Windows

B. MS-DOS and traditional UNIX, both of which rely heavily on command-line interaction

C. Neither, both are GUI-only

D. All three are equally easy without commands

Ans: B MS-DOS and traditional UNIX, both of which rely heavily on command-line interaction. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q475 Scenario **Mixed Practice**

A user wants to check which operating system feature allows recovery of an accidentally deleted file from the desktop environment. Which OS provides this specific feature among the three covered?

A. MS-DOS

B. Traditional UNIX command-line deletion (rm)

C. MS-Windows (Recycle Bin)

D. None of these

Ans: C MS-Windows (Recycle Bin). This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q476 Scenario **Mixed Practice**

Which of the three operating systems is most directly responsible for popularizing the modern Start menu/taskbar paradigm still echoed in various forms today?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C MS-Windows. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q477 Scenario **Mixed Practice**

Which of the three operating systems is most associated with introducing many users to personal computing through a relatively low-cost, simple, text-based system in the early 1980s?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A MS-DOS. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q478 Scenario **Mixed Practice**

Which of the three operating systems is most associated with the principle of "everything is a file," including treating devices as files?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B UNIX. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q479 Scenario **Mixed Practice**

A teacher wants to use a classic example to explain the difference between internal and external commands. Which OS is most commonly used to illustrate this distinction in basic OS courses?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: A MS-DOS. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q480 Scenario **Mixed Practice**

Which of the three operating systems would be most relevant to study to understand the historical roots of multiuser time-sharing systems?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: B UNIX. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q481 Scenario **Mixed Practice**

Which of the three operating systems would be most relevant to study to understand the evolution of the modern desktop GUI used by most home computer users today?

A. MS-DOS

B. UNIX

C. MS-Windows

D. None of these

Ans: C MS-Windows. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q482 Scenario **Mixed Practice**

Considering all topics studied, which operating system would be the best fit for a small business in the 1980s using a single IBM-compatible PC for basic word processing, given the budget and hardware constraints of that era?

A. MS-DOS

B. A full UNIX server system

C. A modern MS-Windows version

D. None of these

Ans: A MS-DOS. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q483 Scenario **Mixed Practice**

Considering all topics studied, which operating system would be the best fit for a university research lab in the 1980s-1990s needing multiple researchers to share one powerful computer concurrently?

A. MS-DOS

B. UNIX

C. A single-user MS-Windows desktop edition

D. None of these

Ans: B UNIX. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Q484 Scenario **Mixed Practice**

Considering all topics studied, which operating system would be the best fit for a present-day home user who wants an easy graphical interface for everyday tasks without learning commands?

A. MS-DOS

B. Traditional UNIX (CLI)

C. MS-Windows

D. None of these

Ans: C MS-Windows. This is the best fit for the scenario, based on its characteristics as covered in this syllabus.

Assertion-Reason Mixed Practice

Q485 Assertion-Reason **Mixed Practice**

Assertion (A): All three operating systems, MS-DOS, UNIX, and MS-Windows, are designed to manage computer hardware and software resources. Reason (R): This is part of the basic definition and purpose of any operating system.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q486 Assertion-Reason **Mixed Practice**

Assertion (A): MS-DOS can run multiple applications simultaneously, just like UNIX. Reason (R): MS-DOS is a single-tasking operating system.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is false, but R is true

D. Both A and R are false

Ans: C A is false, but R is true. The assertion is incorrect, while the reason on its own is a true statement.

Q487 Assertion-Reason **Mixed Practice**

Assertion (A): UNIX's multiuser design makes it suitable for shared computing environments. Reason (R): Classic MS-Windows desktop editions are traditionally designed primarily for a single active user session at a time.

A. Both A and R are true, and R is a separate true fact that does not directly explain A

B. Both A and R are true, and R directly explains why A is true

C. A is false, but R is true

D. Both A and R are false

Ans: A Both A and R are true, and R is a separate true fact that does not directly explain A. This correctly reflects the logical relationship between the assertion and the reason.

Q488 Assertion-Reason Mixed Practice

Assertion (A): MS-Windows generally requires more system resources (RAM, processing power) than MS-DOS. Reason (R): MS-Windows provides a full graphical interface and supports advanced multitasking, which require more resources than a simple command-line, single-tasking system.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

Q489 Assertion-Reason Mixed Practice

Assertion (A): MS-Windows and MS-DOS share a historical relationship. Reason (R): Early versions of MS-Windows operated as a graphical environment running on top of MS-DOS.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is not the correct explanation of A

C. A is true, but R is false

D. A is false, but R is true

Ans: A Both A and R are true, and R is the correct explanation of A. Both the assertion and the reason are correct, and the reason correctly explains the assertion.

True/False Mixed Practice

Q490 True/False Mixed Practice

Which statement is TRUE when comparing the three operating systems overall?

A. MS-DOS, UNIX, and MS-Windows all provide identical user interfaces

B. Each of MS-DOS, UNIX, and MS-Windows has distinct historical origins, interface styles, and typical use cases

C. None of the three can manage files

D. All three were developed by the same single company

Ans: B Each of MS-DOS, UNIX, and MS-Windows has distinct historical origins, interface styles, and typical use cases. This statement is factually accurate; the other options each contain an error about the operating systems covered in this syllabus.

Q491 True/False **Mixed Practice**

Which statement is FALSE when comparing the three operating systems overall?

A. MS-DOS is single-user and single-tasking

B. UNIX supports multiple users and multitasking

C. MS-Windows is purely command-line based with no GUI

D. All three are examples of operating systems

Ans: C MS-Windows is purely command-line based with no GUI. This statement is incorrect as written, making it the answer here; the remaining options are true statements about the operating systems covered in this syllabus.

Q492 True/False **Mixed Practice**

Which of the following is TRUE about MS-DOS, UNIX, and MS-Windows together?

A. All three were released in the exact same year

B. All three are examples of operating systems with different interface paradigms and historical contexts

C. None of them ever had a command-line interface

D. All three require identical hardware

Ans: B All three are examples of operating systems with different interface paradigms and historical contexts. This statement is factually accurate; the other options each contain an error about the operating systems covered in this syllabus.

Q493 True/False **Mixed Practice**

Which of the following is FALSE about MS-DOS, UNIX, and MS-Windows together?

A. MS-DOS is associated with simplicity and minimal resource use

B. UNIX is associated with multiuser, multitasking server environments

C. MS-Windows is associated with a primarily graphical interface

D. All three have identical file naming conventions

Ans: D All three have identical file naming conventions. This statement is incorrect as written, making it the answer here; the remaining options are true statements about the operating systems covered in this syllabus.

Q494 True/False **Mixed Practice**

Which statement is TRUE?

A. UNIX has never supported multiple users

B. MS-DOS supports advanced multitasking similar to modern operating systems

C. MS-Windows is primarily recognized for its graphical user interface

D. None of the three operating systems use any command-line commands

Ans: C MS-Windows is primarily recognized for its graphical user interface. This statement is factually accurate; the other options each contain an error about the operating systems covered in this syllabus.

Q495 True/False **Mixed Practice**

Which statement is FALSE?

A. MS-DOS uses an 8.3 file naming convention

B. UNIX supports multiuser and multitasking operation

C. MS-Windows has no graphical interface

D. All three are operating systems that manage computer resources

Ans: C MS-Windows has no graphical interface. This statement is incorrect as written, making it the answer here; the remaining options are true statements about the operating systems covered in this syllabus.

Match the Following Mixed Practice

Q496 Match **Mixed Practice**

Match each OS with its primary interface style: (1) MS-DOS (2) UNIX (traditional) (3) MS-Windows -- (a) Graphical User Interface (b) Command Line Interface (single-user) (c) Command Line Interface (multiuser)

A. 1-b, 2-c, 3-a

B. 1-a, 2-b, 3-c

C. 1-c, 2-a, 3-b

D. 1-b, 2-a, 3-c

Ans: A These pairings correctly match each item with its role under the operating systems covered in this syllabus.

Q497 Match Mixed Practice

Match each OS with its typical historical era of dominance: (1) MS-DOS (2) UNIX (3) MS-Windows -- (a) 1980s-1990s personal computing, later transitioning to GUI dominance (b) Continuously significant since the 1970s in servers/technical computing (c) Early-mid 1980s personal computing before GUI dominance

A. 1-c, 2-b, 3-a

B. 1-a, 2-b, 3-c

C. 1-b, 2-c, 3-a

D. 1-c, 2-a, 3-b

Ans: A Each pair here correctly links the term with its function in the operating systems covered in this syllabus.

Q498 Match Mixed Practice

Match each OS with its correct developer/origin: (1) MS-DOS (2) UNIX (3) MS-Windows -- (a) Bell Labs (AT&T) (b) Microsoft (c) Microsoft

A. 1-b, 2-a, 3-c

B. 1-a, 2-b, 3-c

C. 1-c, 2-a, 3-b

D. 1-b, 2-c, 3-a

Ans: A These pairings correctly match each item with its role under the operating systems covered in this syllabus.

Final Review

Q499 Review Mixed Practice

Which of these is a correct pairing of operating system and its primary developer/origin?

A. MS-DOS - Microsoft

B. UNIX - Bell Labs (AT&T)

C. MS-Windows - Microsoft

D. All of the above are correct pairings

Ans: D All of the above are correct pairings. This summarises a core comparative fact across all three operating systems.

Q500 Review **Mixed Practice**

Which of these is a correct pairing of operating system and its defining interface trait?

A. MS-DOS - Command Line Interface, single-tasking

B. UNIX - Command Line Interface (traditional), multiuser/multitasking

C. MS-Windows - Graphical User Interface, multitasking

D. All of the above are correct pairings

Ans: D All of the above are correct pairings. This is a key takeaway when reviewing MS-DOS, UNIX, and MS-Windows together.

Q501 Review **Mixed Practice**

Which best summarizes the broad evolution of personal computer interfaces covered in this syllabus?

A. GUI-based systems came first, followed by command-line systems

B. Command-line systems like MS-DOS preceded widespread adoption of graphical systems like MS-Windows, while UNIX maintained strong command-line traditions in technical/server contexts throughout

C. All systems have always been identical in interface style

D. No evolution occurred in operating system interfaces

Ans: B Command-line systems like MS-DOS preceded widespread adoption of graphical systems like MS-Windows, while UNIX maintained strong command-line traditions in technical/server contexts throughout. This summarises a core comparative fact across all three operating systems.

Q502 Review **Mixed Practice**

A user needs to set fine-grained file permissions for different users and groups while also recovering accidentally deleted files via a graphical Recycle Bin. Which best matches each requirement, respectively?

A. UNIX for fine-grained permissions; MS-Windows for the Recycle Bin

B. MS-DOS for fine-grained permissions; UNIX for the Recycle Bin

C. MS-Windows for fine-grained permissions; MS-DOS for the Recycle Bin

D. UNIX for both requirements

Ans: A UNIX for fine-grained permissions; MS-Windows for the Recycle Bin. This is a key takeaway when reviewing MS-DOS, UNIX, and MS-Windows together.

Q503 Review Mixed Practice

Which of the three operating systems would be the best historical example to illustrate the transition from text-only computing to graphical computing for the average consumer?

A. MS-DOS to MS-Windows

B. UNIX to MS-DOS

C. MS-Windows to UNIX

D. None of these illustrate such a transition

Ans: A MS-DOS to MS-Windows. This summarises a core comparative fact across all three operating systems.
