MCQ QUESTION BANK

Complete Answers & Explanations for Every Question

Topic	Questions
Introduction to Virus and Vaccines	87
Applications	42
DTP (Desktop Publishing)	41
E-Mail	43
Internet	55
TOTAL	**268**

TABLE OF CONTENTS

1. Introduction to Virus and Vaccines — 87 Questions
2. Applications — 42 Questions
3. DTP (Desktop Publishing) — 41 Questions
4. E-Mail — 43 Questions
5. Internet — 55 Questions

Introduction to Virus and Vaccines — 87 Questions

Q1	Definition	Computer Virus

What is a computer virus?

A. A useful program that speeds up the computer

B. An operating system component

C. A type of hardware device

D. A malicious self-replicating program that attaches to host programs

Ans: D — A computer virus is a malicious self-replicating program that attaches to legitimate programs and spreads, causing damage to data or systems.

Q2	Definition	Computer Virus

The term 'computer virus' was formally defined by:

A. Charles Babbage

B. Fred Cohen

C. John von Neumann

D. Bill Gates

Ans: B — Fred Cohen formally defined the term 'computer virus' in 1983 in his academic paper on self-replicating programs.

Q3	Classification	Computer Virus

A computer virus is classified as a type of:

A. Hardware

B. Middleware

C. Malware

D. Firmware

Ans: C — A computer virus is classified as malware (malicious software) — software designed to disrupt, damage, or gain unauthorized access to computer systems.

Q4	Definition	Computer Virus

The main purpose of a computer virus is to:

A. Backup important data

B. Cause harm or disruption to the system

C. Optimize memory usage

D. Improve system speed

Ans: B The primary intent of a computer virus is to damage, disrupt, steal data, or gain unauthorized control over a computer system.

Q5	Definition	Computer Virus

Which of the following best describes a computer virus?

A. A diagnostic tool for hardware faults

B. A network communication protocol

C. A self-replicating malicious code that attaches to host programs

D. A program that monitors system performance

Ans: C A computer virus self-replicates by attaching its code to host programs and spreads when those infected programs are executed.

Q6	Characteristics	Computer Virus

Which is the most fundamental characteristic of a computer virus?

A. It improves system performance

B. It requires user permission to spread

C. It is self-replicating

D. It only affects hardware

Ans: C Self-replication is the defining characteristic of a virus — it copies itself without user knowledge or consent.

Q7	Characteristics	Computer Virus

A computer virus typically requires a _____ to replicate.

A. Network driver

B. Antivirus program

C. Compiler

D. Host program

Ans: D Unlike worms, viruses cannot spread independently. They must attach to a host program or file to replicate and spread.

Q8	Comparison	Virus vs Worm

Which characteristic distinguishes a virus from a worm?

A. Both always need a host file

B. Viruses need a host file; worms self-propagate independently

C. Neither needs a host file

D. Worms need a host file; viruses self-propagate independently

Ans: B Viruses attach to host files to spread, while worms are standalone programs that self-propagate across networks without a host.

Q9	Characteristics	Computer Virus

A dormant virus is one that:

A. Is spreading across networks

B. Has been deleted by antivirus

C. Is actively destroying files

D. Is present but not yet activated

Ans: D A dormant (latent) virus has infected a system but waits for a trigger condition — such as a date or user action — before activating.

Q10	Characteristics	Computer Virus

Viruses are generally written using:

A. Programming or assembly languages

B. Natural language only

C. SQL only

D. HTML only

Ans: A Computer viruses are written in programming languages such as assembly, C, C++, Python, or scripting languages like VBScript.

Q11	Types	Computer Virus

A non-resident virus:

A. Executes, infects files, and exits without remaining in memory

B. Is always harmless

C. Stays permanently in RAM

D. Only infects the boot sector

Ans: A A non-resident virus executes, finds and infects target files, then exits without installing itself permanently in memory.

Q12	Types	Computer Virus

Which type of virus infects the boot sector of a hard disk?

A. Macro virus

B. Polymorphic virus

C. File virus

D. Boot sector virus

Ans: D A boot sector virus infects the Master Boot Record (MBR) or boot sector and loads itself every time the computer starts.

Q13	Types	Computer Virus

A macro virus primarily affects:

A. Hardware device drivers

B. Boot sector of the disk

C. Document files like Word or Excel

D. Operating system files

Ans: C Macro viruses infect applications that support macros, most commonly Microsoft Word and Excel document files.

Q14	Types	Computer Virus

Which virus changes its code with every replication to avoid detection?

A. Polymorphic virus

B. File virus

C. Boot sector virus

D. Logic bomb

Ans: A A polymorphic virus alters its signature code each time it replicates, defeating signature-based antivirus detection.

Q15	Types	Computer Virus

A virus that disguises itself as legitimate software is called a:

A. Trojan horse

B. Worm

C. Spyware

D. Adware

Ans: A A Trojan horse masquerades as useful or legitimate software to trick users into installing it, then performs malicious actions.

Q16	Types	Computer Virus

A stealth virus is designed to:

A. Infect only email attachments

B. Improve system performance

C. Replicate as fast as possible

D. Hide its presence from antivirus tools

Ans: D Stealth viruses intercept OS calls to conceal their presence from antivirus software and system monitoring tools.

Q17	Types	Computer Virus

Which of the following is NOT a type of computer virus?

A. Macro virus

B. Boot sector virus

C. Polymorphic virus

D. Firewall virus

Ans: D A firewall is a security tool used to block unauthorized access — it is NOT a type of virus. The others are all real virus types.

Q18	Types	Computer Virus

A multipartite virus:

A. Spreads only through email

B. Infects only document files

C. Infects both boot sector and executable files simultaneously

D. Is completely harmless

Ans: C A multipartite virus attacks both the boot sector and executable files, making it harder to detect and remove completely.

Q19	Types	Computer Virus

Ransomware is malware that:

A. Manages disk resources automatically

B. Speeds up internet browsing

C. Encrypts user files and demands payment for decryption

D. Improves system security

Ans: C Ransomware encrypts the victim's files and demands a ransom (usually cryptocurrency) in exchange for the decryption key.

Q20	Types	Computer Virus

A logic bomb is malicious code that:

A. Changes its code to avoid detection

B. Executes when specific conditions are met, such as a date

C. Spreads through email contacts

D. Infects the boot sector

Ans: B A logic bomb lies dormant and executes when a specific condition is met, such as a particular date, time, or user action.

Q21	Types	Computer Virus

A resident virus:

A. Does not load into memory

B. Is easily detected by all antiviruses

C. Only infects boot sectors

D. Installs itself into RAM to infect files at any time

Ans: D A resident virus installs itself into RAM and can intercept OS operations to infect files even when the original infected program is not running.

Q22	Types	Malware

Spyware secretly:

A. Speeds up internet browsing

B. Collects user information without consent

C. Defragments the hard disk

D. Protects against virus attacks

Ans: B Spyware secretly monitors user activity and collects personal data such as passwords, browsing habits, and keystrokes.

Q23	Types	Malware

Adware is software that:

A. Repairs corrupted system files

B. Defends against malware

C. Automatically displays or downloads unwanted advertisements

D. Encrypts user data for safety

Ans: C Adware automatically displays unwanted advertisements and may track user behavior. It is often bundled with free software.

Q24	Comparison	Virus vs Worm

A worm differs from a virus because it:

A. Only infects boot sectors

B. Always deletes all files

C. Self-propagates across networks without needing a host file

D. Cannot replicate itself

Ans: C Worms are standalone programs that self-propagate across networks without needing to attach to a host file, unlike viruses.

Q25	Types	Malware

Which malware allows unauthorized remote access to a computer?

A. Boot sector virus

B. Spyware

C. Adware

D. Remote Access Trojan (RAT)

Ans: D A Remote Access Trojan (RAT) gives an attacker unauthorized remote control over the infected computer.

Q26	Types	Computer Virus

A file infector virus attaches itself to:

A. Only boot sectors

B. Executable program files (.exe, .com)

C. Only email messages

D. Only document files

Ans: B A file infector virus attaches its code to executable program files (such as .exe or .com) and activates when those programs run.

Q27	Types	Malware

Keylogger malware is used to:

A. Secretly record keystrokes to capture passwords and data

B. Speed up keyboard input

C. Improve keyboard driver performance

D. Translate keyboard shortcuts

Ans: A A keylogger records every keystroke made by the user, capturing sensitive data such as passwords, credit card numbers, and messages.

Q28	Effects	Computer Virus

Which is a common effect of a computer virus?

A. Data loss and file corruption

B. Faster processing speed

C. Automatic system updates

D. Improved network performance

Ans: A Computer viruses can cause data loss, file corruption, system slowdown, unauthorized access, and complete system failure.

Q29	Effects	Computer Virus

Slow computer performance can be a symptom of:

A. A recently updated operating system

B. A virus consuming system resources

C. A faster processor installed

D. More RAM being added

Ans: B Viruses often consume CPU and memory resources continuously, causing noticeably slower system performance.

Q30	Effects	Computer Virus

A virus sending emails from the user's account without their knowledge is an example of:

A. Formatting the hard disk

B. Installing antivirus software

C. Deleting files

D. Unauthorized email propagation

Ans: D Some viruses (especially worms) use the infected system's email client to send copies of themselves to all contacts in the address book.

Q31	Effects	Computer Virus

Which of the following is NOT a symptom of virus infection?

A. Unexplained increase in file sizes

B. Programs not working correctly

C. Faster boot time than usual

D. Computer reboots on its own

Ans: C Faster boot time is NOT a virus symptom. Viruses typically cause slowdowns, unexpected reboots, increased file sizes, and program malfunctions.

Q32	Effects	Computer Virus

Computer viruses can spread through:

A. Infected USB drives, email attachments, and downloads

B. Monitor screens

C. Keyboard and mouse

D. Power cables

Ans: A Viruses spread via infected removable media (USB), email attachments, malicious downloads, and network connections.

Q33	Detection	Computer Virus

Which detection method compares file code against a database of known virus patterns?

A. Sandboxing

B. Behavioral analysis

C. Heuristic analysis

D. Signature-based detection

Ans: D Signature-based detection compares file code against a database of known virus signatures — the most common antivirus detection method.

Q34	Detection	Computer Virus

Heuristic analysis in antivirus is used to:

A. Automatically delete all infected files

B. Update virus definition databases

C. Detect only known viruses

D. Detect new or unknown viruses based on suspicious behavior

Ans: D Heuristic analysis examines code behavior and structure to identify potentially malicious activity, enabling detection of unknown or zero-day viruses.

Q35	Detection	Computer Virus

Sandboxing in cybersecurity means:

A. Running suspicious programs in an isolated environment to observe behavior

B. Encrypting sensitive user data

C. Building network firewalls

D. Backing up all system files

Ans: A Sandboxing isolates a suspicious program in a controlled environment where it runs safely, allowing behavior observation without system risk.

Q36	Detection	Computer Virus

Real-time scanning in antivirus means:

A. Scanning only email attachments

B. Manual monthly scans only

C. Continuously monitoring all system activity for threats

D. Scanning only on weekends

Ans: C Real-time (on-access) scanning monitors all file operations continuously and checks files as they are opened, created, or downloaded.

Q37	Detection	Computer Virus

An unexplained increase in file sizes may indicate:

A. New software was installed properly

B. Better compression is working

C. A virus has attached its code to existing files

D. System has more free space

Ans: C When a virus attaches its code to an existing file, the file size increases unexpectedly — a classic sign of file-infector virus activity.

Q38	Detection	Computer Virus

Behavioral detection in antivirus monitors:

A. How programs behave at runtime to detect suspicious activity

B. Only file extensions

C. Internet connection speed

D. Only file signatures

Ans: A Behavioral detection observes how programs act during execution, flagging actions typical of malware such as unexpected file modification or self-replication.

Q39	Prevention	Computer Virus

The BEST way to prevent virus infection is to:

A. Use the computer offline only

B. Delete all email accounts

C. Never use the internet

D. Install and regularly update antivirus software

Ans: D Installing reputable antivirus software and keeping it regularly updated is the single most effective protection against virus infections.

Q40	Prevention	Computer Virus

Regularly updating antivirus software is important because:

A. It reduces internet bills

B. New definitions are added to detect newly discovered viruses

C. It improves screen resolution

D. It makes the computer faster

Ans: B Virus definition updates ensure the antivirus can recognize and neutralize the latest viruses and malware variants as they emerge.

Q41	Prevention	Computer Virus

Which email practice helps prevent virus spread?

A. Forward all emails to contacts

B. Disable antivirus before reading emails

C. Reply to all spam emails

D. Never open attachments from unknown senders

Ans: D Email attachments are a primary virus vector. Not opening attachments from unknown or suspicious senders significantly reduces infection risk.

Q42	Prevention	Computer Virus

A firewall primarily helps in:

A. Speeding up the processor

B. Increasing available disk space

C. Improving graphics quality

D. Preventing unauthorized network access

Ans: D A firewall monitors and controls incoming/outgoing network traffic, blocking unauthorized access and protecting against network-based threats.

Q43	Prevention	Computer Virus

Scanning a USB drive before accessing it helps prevent:

A. Slow internet connection

B. Virus infection via removable media

C. Battery drain on laptop

D. Hardware malfunction

Ans: B Scanning removable media with antivirus before accessing content prevents viruses that commonly spread via USB drives and external storage.

Q44	Prevention	Computer Virus

Keeping the operating system updated helps because:

A. It increases processor speed

B. It adds new decorative themes

C. Security patches fix vulnerabilities that viruses exploit

D. It changes the desktop wallpaper

Ans: C OS updates include security patches that fix known vulnerabilities which viruses and malware are specifically designed to exploit.

Q45	Prevention	Computer Virus

Which software download practice reduces virus risk?

A. Download only from trusted, official sources

B. Share login credentials with others

C. Disable OS updates

D. Download from any free website

Ans: A Downloading software only from official, trusted sources greatly reduces the risk of accidentally installing malware-bundled programs.

Q46	Prevention	Computer Virus

Using strong, unique passwords helps prevent:

A. Hardware failures

B. Power supply failures

C. Monitor damage

D. Unauthorized account access used to install malware

Ans: D

Strong passwords reduce unauthorized account access which attackers exploit to install malware or viruses on target systems.

Q47	Definition	Antivirus

What is antivirus software?

A. Software that creates viruses for testing

B. Software that formats hard disks

C. A type of operating system

D. Software designed to detect, prevent, and remove malware

Ans: D

Antivirus software (also called anti-malware) detects, prevents, quarantines, and eliminates malicious software from computer systems.

Q48	Examples	Antivirus

Which is a popular antivirus software?

A. Adobe Photoshop

B. Norton Antivirus

C. Microsoft Word

D. VLC Media Player

Ans: B

Norton Antivirus is one of the most well-known security products. Others include Kaspersky, Avast, McAfee, and Bitdefender.

Q49	Concepts	Antivirus

What does 'quarantine' mean in antivirus?

A. Encrypting all user files

B. Isolating infected files to prevent further spread

C. Permanently deleting all infected files

D. Sharing files with the antivirus vendor

Ans: B Quarantine isolates suspicious or infected files in a secure location where they cannot harm the system, allowing the user to review them.

Q50	Functions	Antivirus

Which is NOT a function of antivirus software?

A. Removing detected viruses

B. Scanning files for malware

C. Providing real-time protection

D. Creating computer viruses

Ans: D Antivirus software detects, prevents, and removes viruses. Creating viruses is a criminal act — the complete opposite of antivirus purpose.

Q51	Concepts	Antivirus

Antivirus identifies known viruses using:

A. Random number generators

B. Virus definition databases (signature files)

C. Browser cookies

D. Encryption keys

Ans: B Antivirus programs maintain databases of known virus signatures and compare file code against these patterns to detect infections.

Q52	Concepts	Antivirus

What is a 'false positive' in antivirus?

A. A safe file incorrectly identified as malware

B. A corrupted antivirus database

C. A virus that escapes detection

D. A new type of virus

Ans: A — A false positive occurs when antivirus software incorrectly flags a legitimate, harmless file or program as malicious.

Q53	Concepts	Antivirus

'On-demand scanning' means:

A. A manual scan initiated by the user at a chosen time

B. Scanning emails only

C. Continuous automatic scanning

D. Scanning only at system startup

Ans: A — On-demand scanning allows users to manually start a scan of specific files, folders, or the entire system whenever they choose.

Q54	Features	Antivirus

Which antivirus feature automatically checks email for malicious attachments?

A. Disk defragmentation

B. Email scanning

C. Screen saver activation

D. File compression utility

Ans: B — Email scanning is an antivirus feature that inspects email messages and attachments for malware before they reach the inbox.

Q55	Concepts	Antivirus

The process of updating antivirus definitions is called:

A. Disk formatting

B. Defragmentation

C. Compilation

D. Virus definition update

Ans: D Updating virus definitions (signature updates) ensures the antivirus can recognize newly discovered malware variants.

Q56	Concepts	Antivirus

An antivirus that is not updated regularly will:

A. Automatically generate new definitions

B. Become faster over time

C. Work even better over time

D. Fail to detect viruses created after the last update

Ans: D Without regular updates, antivirus software cannot detect viruses created after its last definition update, leaving the system vulnerable.

Q57	Definition	Antivirus

Which best describes a 'computer vaccine'?

A. Antivirus software that immunizes against known viruses

B. A backup copy of all files

C. A firewall for network protection

D. Hardware that prevents virus entry

Ans: A A computer vaccine (antivirus) is software that detects and immunizes the system against known viruses, analogous to biological vaccines.

Q58	Features	Antivirus

Features of a good antivirus program include:

A. Real-time protection, automatic updates, email scanning, and quarantine

B. Deleting all unknown files

C. Slowing down the computer intentionally

D. Only scanning on demand

Ans: A — A good antivirus provides real-time protection, scheduled scanning, automatic definition updates, email scanning, and quarantine capabilities.

Q59	Examples	Antivirus

Kaspersky, Norton, McAfee, and Avast are all examples of:

A. Antivirus software

B. Operating systems

C. Programming languages

D. Web browsers

Ans: A — These are all leading antivirus and internet security software products used to protect computers from malware and cyber threats.

Q60	Assertion-Reason	Antivirus

Assertion (A): Antivirus software should be updated regularly.
Reason (R): New viruses are created continuously and updated definitions detect them.

A. Both A and R are true, and R is the correct explanation of A

B. A is false but R is true

C. A is true but R is false

D. Both A and R are true, but R is NOT the correct explanation of A

Ans: A — Both are true. Regular updates are essential because cybercriminals constantly create new viruses requiring updated definitions to detect and neutralize.

Q61	Assertion-Reason	Computer Virus

Assertion (A): A polymorphic virus is difficult to detect.
Reason (R): It changes its code signature with each replication.

A. A is false but R is true

B. Both A and R are true, and R is the correct explanation of A

C. A is true but R is false

D. Both A and R are true, but R is NOT the correct explanation of A

Ans: B Polymorphic viruses mutate their code each replication cycle, changing their signature and making signature-based detection ineffective.

Q62	Assertion-Reason	Computer Virus

Assertion (A): A firewall alone fully protects a computer from all viruses.
Reason (R): Firewalls block all types of malware automatically.

A. Both A and R are false

B. Both A and R are true, but R is NOT the correct explanation of A

C. A is true but R is false

D. Both A and R are true, and R is the correct explanation of A

Ans: A A firewall controls network traffic but does not scan files for viruses. Both antivirus and firewall are needed for comprehensive protection.

Q63	Match-Following	Computer Virus

Match the virus type with its characteristic:
(i) Boot Sector (ii) Macro (iii) Trojan (iv) Worm

A. (i)-Disguises, (ii)-Self-propagates, (iii)-Affects Office docs, (iv)-Infects MBR

B. (i)-Infects MBR, (ii)-Affects Office docs, (iii)-Disguises as legit software, (iv)-Self-propagates on network

C. (i)-Affects Office docs, (ii)-Self-propagates, (iii)-Infects MBR, (iv)-Disguises

D. (i)-Self-propagates, (ii)-Infects MBR, (iii)-Affects Office docs, (iv)-Disguises

Ans: B Boot Sector infects MBR, Macro infects Office docs, Trojan disguises as legit software, Worm self-propagates across networks independently.

Q64	Match-Following	Antivirus

Match antivirus term with its definition:
(i) Quarantine (ii) False Positive (iii) Heuristic (iv) Signature

A. (i)-Virus code pattern, (ii)-Isolate files, (iii)-Safe file flagged, (iv)-Behavior-based

B. (i)-Isolate infected files, (ii)-Safe file flagged as malware, (iii)-Behavior-based detection, (iv)-Virus code pattern

C. (i)-Behavior-based, (ii)-Virus code pattern, (iii)-Isolate files, (iv)-Safe file flagged

D. (i)-Safe file flagged, (ii)-Behavior-based, (iii)-Virus code pattern, (iv)-Isolate files

Ans: B — Quarantine=isolate infected files, False Positive=safe file wrongly flagged, Heuristic=behavior-based detection, Signature=virus code pattern.

Q65	Scenario	Computer Virus

Ravi downloads a free game from an untrusted website. Next day his computer sends emails to all his contacts automatically. This is most likely:

A. His computer is infected with a virus or worm

B. His internet speed increased

C. His email app auto-updated

D. His contacts spammed him

Ans: A — This is classic virus/worm behavior — spreading through the victim's email address book after entering via an untrusted download.

Q66	Scenario	Computer Virus

Priya's screen shows: 'Your files are encrypted. Pay Bitcoin to get them back.' This malware is:

A. Spyware

B. Ransomware

C. Boot sector virus

D. Adware

Ans: B — This is ransomware — it encrypts user files and demands a ransom payment for the decryption key to restore access.

Q67	Scenario	Computer Virus

An antivirus scan shows no threats, but the computer still behaves strangely. The virus is likely a:

A. Macro virus

B. Stealth virus

C. Logic bomb

D. Boot sector virus

Ans: B

A stealth virus hides from detection tools, explaining why a scan returns clean results despite visible symptoms of infection.

Q68	Scenario	Computer Virus

A computer virus that activates every year on April 1st is an example of a:

A. Stealth virus

B. Logic bomb

C. Polymorphic virus

D. Boot sector virus

Ans: B

A logic bomb triggers on a specific condition — here a calendar date (April 1st) — making it a time-triggered logic bomb.

Q69	History	Computer Virus

The ILOVEYOU virus (2000) spread primarily through:

A. Bluetooth

B. Email with infected attachment

C. Wi-Fi networks

D. USB drives

Ans: B

The ILOVEYOU virus spread via email with subject 'ILOVEYOU' and an infected VBS attachment, infecting millions of computers worldwide.

Q70	History	Computer Virus

Which is considered one of the first known self-replicating computer programs?

A. WannaCry

B. Creeper

C. Conficker

D. Stuxnet

Ans: B Creeper (1971) is one of the earliest self-replicating programs, spreading via ARPANET and displaying 'I'm the creeper, catch me if you can!'

Q71	History	Computer Virus

The WannaCry ransomware attack (2017) exploited a vulnerability in:

A. Google Android

B. Apple macOS

C. Microsoft Windows

D. Linux Ubuntu

Ans: C WannaCry exploited the EternalBlue vulnerability in Microsoft Windows SMB protocol, affecting hundreds of thousands of computers worldwide.

Q72	Comparison	Antivirus

The primary difference between antivirus and anti-malware software is:

A. They are completely identical

B. Antivirus is always free; anti-malware is always paid

C. Antivirus focuses on viruses; anti-malware covers broader malware types including spyware and ransomware

D. Anti-malware only works on mobile devices

Ans: C Traditional antivirus focused on viruses, while modern anti-malware covers a broader range including spyware, ransomware, adware, and trojans.

Q73	Prevention	Computer Virus

Which of the following is a virus protection method?

A. Downloading software from any website

B. Sharing passwords with all users

C. Installing antivirus and keeping OS and software updated

D. Opening all email attachments immediately

Ans: C Key virus protection methods: install antivirus, update regularly, patch OS, handle emails carefully, and download only from trusted sources.

Q74	Effects	Computer Virus

A computer infected with a virus may show which of the following?

A. Programs open faster than usual

B. Improved battery life on laptop

C. Automatic increase in RAM

D. Unexpected pop-up messages appearing on screen

Ans: D Unexpected pop-ups are a common visual symptom of virus infection, along with slow performance, missing files, and unusual network activity.

Q75	Concepts	Antivirus

Which type of antivirus scan checks every file on the entire hard disk?

A. Boot scan

B. Email scan

C. Quick scan

D. Full system scan

Ans: D A full system scan checks every file and folder on the hard disk, providing thorough but time-consuming protection.

Q76	Types	Malware

The full form of 'RAT' in cybersecurity is:

A. Rapid Attack Threat

B. Remote Access Trojan

C. Random Access Trojan

D. Recurring Antivirus Tool

Ans: B RAT stands for Remote Access Trojan — malware that gives an attacker unauthorized remote control over an infected computer.

Q77	Concepts	Computer Virus

Which of the following best describes 'zero-day' virus?

A. A virus that deletes files in zero seconds

B. A newly discovered virus for which no antivirus definition exists yet

C. A virus that only infects new computers

D. A virus that attacks on New Year's Day

Ans: B A zero-day virus exploits a vulnerability on the same day it becomes known, before antivirus vendors can create a definition to detect it.

Q78	Features	Antivirus

Antivirus software that uses cloud-based detection means:

A. The antivirus stores all files in the cloud

B. All user files are uploaded to the cloud

C. Virus definitions and analysis are performed on remote cloud servers

D. The internet is required to turn on the computer

Ans: C Cloud-based antivirus sends suspicious file data to remote servers for analysis, enabling faster detection of new threats.

Q79	Prevention	Computer Virus

Which action does NOT help protect against virus infection?

A. Enabling automatic OS updates

B. Avoiding suspicious email attachments

C. Disabling antivirus to speed up the computer

D. Using a firewall

Ans: C Disabling antivirus significantly increases vulnerability. Enabling updates, firewall, and careful email handling are all protective measures.

Q80	Assertion-Reason	Malware

Assertion (A): Spyware is considered a type of malware.
Reason (R): Spyware secretly collects user information without consent.

A. Both A and R are true, but R is NOT the correct explanation of A

B. A is false but R is true

C. A is true but R is false

D. Both A and R are true, and R is the correct explanation of A

Ans: D Spyware qualifies as malware because it maliciously collects user data (passwords, keystrokes, browsing history) without the user's knowledge.

Q81	Types	Computer Virus

A virus that only activates when a specific program is run is known as a:

A. Triggered file virus

B. Logic bomb

C. Resident virus

D. Boot sector virus

Ans: A Some file infector viruses only activate and replicate when their specific host program is executed, making them harder to detect.

Q82	Concepts	Computer Virus

Which of the following is an example of social engineering used to spread viruses?

A. Tricking users into clicking malicious links via fake messages

B. Infecting the boot sector

C. Using polymorphic code

D. Exploiting OS vulnerabilities

Ans: A — Social engineering manipulates users psychologically — e.g., fake urgent messages — to click malicious links that install viruses.

Q83	History	Computer Virus

The 'Conficker' worm primarily targeted:

A. Android smartphones

B. Apple macOS

C. Microsoft Windows operating systems

D. Linux servers

Ans: C — Conficker (2008–2009) was a notorious worm that exploited Windows vulnerabilities, infecting millions of computers worldwide.

Q84	Features	Antivirus

Which of the following is NOT a characteristic of good antivirus software?

A. Automatic updates

B. Quarantine capability

C. Real-time protection

D. Consuming all system resources permanently

Ans: D — Good antivirus should have minimal system impact. Consuming all resources makes the computer unusable, which is NOT a desired feature.

Q85	Effects	Computer Virus

A virus can potentially damage which of the following?

A. Only the keyboard

B. Only the monitor display

C. Only floppy disks

D. Files, operating system, BIOS, and hard disk data

Ans: D Advanced viruses can damage files, corrupt the OS, overwrite BIOS firmware, and destroy data stored on hard disks.

Q86	Types	Malware

Which of the following malware collects banking credentials specifically?

A. Polymorphic virus

B. Banking Trojan

C. Boot sector virus

D. Adware

Ans: B A Banking Trojan is specialized malware designed to steal online banking credentials, credit card numbers, and financial information.

Q87	Concepts	Computer Virus

What does 'virus hoax' mean?

A. An antivirus software

B. A real virus that hides itself

C. A very powerful virus

D. A false alarm about a non-existent virus spread to cause unnecessary fear

Ans: D A virus hoax is a false claim (usually via email or social media) warning about a non-existent virus, designed to cause panic and waste time.

Applications — 42 Questions

Q88	Definition	Applications

What is application software?

A. The operating system of the computer

B. Software that manages network connections

C. Software designed to help users perform specific tasks

D. Software that manages computer hardware resources

Ans: C Application software (apps) are end-user programs designed to perform specific tasks such as word processing, playing music, or browsing the web.

Q89	Examples	Applications

Which is an example of application software?

A. BIOS

B. Windows OS

C. Microsoft Word

D. Device drivers

Ans: C Microsoft Word is application software for word processing. Windows OS, BIOS, and device drivers are system software, not application software.

Q90	Types	Applications

System software differs from application software in that:

A. System software performs user tasks; application software manages hardware

B. Both serve exactly the same purpose

C. Application software is always more important

D. System software manages hardware and resources; application software performs user tasks

Ans: D System software (OS, drivers) manages hardware and system resources, while application software performs specific end-user tasks.

Q91	Examples	Applications

Which is word processing software?

A. Microsoft Word

B. Microsoft Excel

C. Adobe Photoshop

D. VLC Media Player

Ans: A Microsoft Word is a word processing application used to create, edit, format, and print text documents.

Q92	Uses	Applications

Spreadsheet software is primarily used for:

A. Playing video files

B. Browsing the internet

C. Creating presentations

D. Organizing and analyzing data in rows and columns

Ans: D Spreadsheet software like Microsoft Excel is used to organize, calculate, and analyze tabular data arranged in rows and columns.

Q93	Examples	Applications

Microsoft Excel is an example of:

A. Word processing software

B. Spreadsheet software

C. Presentation software

D. Database software

Ans: B Microsoft Excel is a spreadsheet application used for data organization, calculations, charting, and financial analysis.

Q94	Examples	Applications

Which application creates slideshows and presentations?

A. Microsoft PowerPoint

B. Notepad

C. Microsoft Word

D. Microsoft Excel

Ans: A Microsoft PowerPoint is a presentation application for creating slideshows with text, images, charts, and multimedia content.

Q95	Types	Applications

Which is NOT application software?

A. VLC Media Player

B. Microsoft Excel

C. Linux OS

D. Adobe Photoshop

Ans: C Linux OS is system software (an operating system). Adobe Photoshop, VLC Media Player, and Excel are all application software.

Q96	Types	Applications

Custom software is:

A. Software available for everyone to purchase

B. Software developed specifically for a particular organization's unique needs

C. Open-source software free for all

D. Pre-installed software on computers

Ans: B Custom software is specifically developed to meet the unique requirements of a particular organization, unlike generic off-the-shelf software.

Q97	Types	Applications

General-purpose software can be used:

A. Only by expert programmers

B. For a wide variety of tasks by different users

C. Only for one specific task

D. Only on mainframe computers

Ans: B General-purpose software like word processors, spreadsheets, and browsers serve many different tasks across various industries and users.

Q98	Examples	Applications

Adobe Photoshop is an example of:

A. Word processing software

B. Antivirus software

C. Image editing / graphics software

D. Spreadsheet software

Ans: C Adobe Photoshop is a professional graphics and image editing application for photo manipulation, digital art, and graphic design.

Q99	Examples	Applications

Tally is an example of:

A. Accounting software

B. Media player software

C. Antivirus software

D. Educational software

Ans: A Tally is a widely used accounting software for financial accounting, inventory management, and business operations.

Q100	Types	Applications

Which type of software has freely available and modifiable source code?

A. Open-source software

B. Adware

C. Shareware

D. Proprietary software

Ans: A Open-source software has source code freely available for anyone to view, modify, and redistribute.

Q101	Types	Applications

Freeware is software that:

A. Can only be used once

B. Is always open source

C. Costs money to use

D. Is available at no cost, though source code may not be provided

Ans: D Freeware is available free of charge, but unlike open-source software, the source code may not be provided or modifiable.

Q102	Types	Applications

Utility software is used to:

A. Browse the internet

B. Create computer viruses

C. Perform creative tasks like word processing

D. Help manage, maintain, and optimize computer resources

Ans: D Utility software helps maintain and optimize the computer system. Examples: disk defragmenters, antivirus, file compressors, and backup tools.

Q103	Types	Applications

Shareware is:

A. Software distributed freely for trial with limited features or time

B. Free software with all features unlocked

C. Open-source software

D. Software shared illegally

Ans: A Shareware is distributed freely for a trial period or with limited features, requiring payment to unlock full functionality.

Q104	Examples	Applications

Which application software is used for database management?

A. Microsoft Word

B. Winamp

C. Microsoft Access

D. VLC Media Player

Ans: C Microsoft Access is a DBMS (Database Management System) used to create, manage, query, and report on structured databases.

Q105	Examples	Applications

Which is an educational application software?

A. Adobe Photoshop

B. Khan Academy App

C. Tally

D. VLC Player

Ans: B Educational software is designed for learning. Khan Academy is a well-known educational platform providing courses and exercises.

Q106	Uses	Applications

A media player application is used to:

A. Create database records

B. Write text documents

C. Play audio and video files

D. Browse websites

Ans: C Media player applications like VLC, Windows Media Player, and iTunes play audio and video files in various formats.

Q107	Examples	Applications

Which is an accounting application?

A. Adobe Reader

B. MS Paint

C. Google Chrome

D. Tally ERP 9

Ans: D Tally ERP 9 is a popular accounting application used for financial management, GST compliance, and business reporting.

Q108	Types	Applications

Proprietary software is software that:

A. Is always free to use

B. Is owned by a company and requires a license

C. Is written in assembly language only

D. Can be freely modified and distributed

Ans: B Proprietary software is owned by a developer or company and requires purchase of a license. Users cannot view or modify its source code.

Q109	Features	Applications

A feature of application software is that it:

A. Provides a user-friendly interface for specific productive tasks

B. Controls the operating system

C. Is always free of cost

D. Directly manages hardware components

Ans: A Application software provides user-friendly interfaces enabling users to perform specific productive tasks efficiently.

Q110	Examples	Applications

MS Paint is an example of:

A. Basic graphics/painting software

B. Word processing software

C. Database software

D. Spreadsheet software

Ans: A MS Paint is a basic graphics application bundled with Windows, used for simple drawing, painting, and image editing tasks.

Q111	Examples	Applications

Google Chrome and Mozilla Firefox are examples of:

A. Word processing software

B. Accounting software

C. Web browser applications

D. DTP software

Ans: C Google Chrome and Mozilla Firefox are web browser applications used to access and navigate the World Wide Web.

Q112	Assertion-Reason	Applications

Assertion (A): Application software depends on system software to function.
Reason (R): System software provides the environment in which application software operates.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is NOT the correct explanation of A

C. A is true but R is false

D. A is false but R is true

Ans: A Application software cannot function without an underlying OS (system software) that manages hardware and provides a runtime environment.

Q113	Scenario	Applications

A school needs software for managing student records, fees, and attendance. They should use:

A. Custom application software

B. Firmware

C. Off-the-shelf general software

D. System software

Ans: A Custom software is developed specifically for unique organizational needs — ideal for managing school-specific records, fees, and attendance.

Q114	Match-Following	Applications

Match software with its type:
(i) MS Word (ii) Adobe Photoshop (iii) VLC Player (iv) Tally

A. (i)-Word Processor, (ii)-Image Editor, (iii)-Media Player, (iv)-Accounting

B. (i)-Image Editor, (ii)-Accounting, (iii)-Word Processor, (iv)-Spreadsheet

C. (i)-Media Player, (ii)-Word Processor, (iii)-Image Editor, (iv)-Spreadsheet

D. (i)-Spreadsheet, (ii)-Media Player, (iii)-Accounting, (iv)-Word Processor

Ans: A MS Word=Word Processor, Adobe Photoshop=Image Editor, VLC=Media Player, Tally=Accounting software.

Q115	Types	Applications

Firmware is software that:

A. Is installed by users on demand

B. Is permanently embedded in hardware devices like printers and routers

C. Runs only on mobile phones

D. Can be easily modified by users

Ans: B Firmware is software permanently embedded in hardware devices like printers, routers, and cameras to control their basic functions.

Q116	Scenario	Applications

A hospital using software to manage patient records and appointments is an example of:

A. Media player software use

B. Custom application software use

C. DTP software use

D. Painting software use

Ans: B Custom application software is developed to meet specific operational needs — here, managing hospital patient records and appointments.

Q117	Types	Applications

Which of the following is an example of system software?

A. Windows 10 OS

B. VLC Media Player

C. Adobe Photoshop

D. Microsoft Word

Ans: A Windows 10 OS is system software that manages hardware and provides the platform for application software to run.

Q118	Examples	Applications

Which software category includes MS Word, Excel, and PowerPoint together?

A. System software suite

B. Microsoft Office productivity suite

C. Open-source software

D. Utility software

Ans: B Microsoft Office is a productivity software suite that includes Word (word processing), Excel (spreadsheet), and PowerPoint (presentations).

Q119	Examples	Applications

Which of the following is an example of open-source office software?

A. Microsoft Office

B. LibreOffice

C. Tally

D. Adobe Acrobat

Ans: B LibreOffice is a free, open-source office productivity suite that includes word processor, spreadsheet, and presentation applications.

Q120	Uses	Applications

CAD software is primarily used for:

A. Playing music

B. Browsing the internet

C. Computer-Aided Design — creating technical drawings and 3D models

D. Managing accounts

Ans: C CAD (Computer-Aided Design) software like AutoCAD is used by engineers and architects to create precise technical drawings and 3D models.

Q121	Examples	Applications

Which type of application software is used by graphic designers?

A. Graphic design software like CorelDRAW or Illustrator

B. Database software

C. Spreadsheet software

D. Accounting software

Ans: A — Graphic design applications like Adobe Illustrator, CorelDRAW, and Photoshop are used by designers to create visual content.

Q122	Uses	Applications

The purpose of presentation software is to:

A. Write and edit text documents

B. Create and display visual slideshows for audiences

C. Manage financial accounts

D. Store and query data

Ans: B — Presentation software (PowerPoint, Google Slides) is used to create visual slideshows combining text, images, and multimedia for audiences.

Q123	Examples	Applications

Which application is used to read PDF files?

A. Adobe Acrobat Reader

B. Microsoft Word

C. Tally

D. VLC Media Player

Ans: A — Adobe Acrobat Reader is the standard application for viewing, printing, and annotating PDF (Portable Document Format) files.

Q124	Examples	Applications

Google Docs, Google Sheets, and Google Slides are examples of:

A. Cloud-based web application software

B. Antivirus software

C. System software

D. Offline desktop software

Ans: A — Google Docs, Sheets, and Slides are cloud-based web applications accessible via browser, stored online, and enabling real-time collaboration.

Q125	Examples	Applications

Which of the following is a video editing application?

A. Microsoft Access

B. Tally

C. Norton Antivirus

D. Adobe Premiere Pro

Ans: D — Adobe Premiere Pro is a professional video editing application used for editing, producing, and publishing video content.

Q126	Assertion-Reason	Applications

Assertion (A): Open-source software is always free of charge.
Reason (R): Open-source software has freely available source code.

A. Both A and R are partially incorrect

B. Both A and R are true, and R is the correct explanation of A

C. A is true but R is false

D. Both A and R are true, but R is NOT the correct explanation of A

Ans: D — Open-source means source code is freely available, but the software may still have costs (support, packaging). Free availability of code ≠ free price.

Q127	Match-Following	Applications

Match the application with its category:
(i) AutoCAD (ii) Audacity (iii) GIMP (iv) Notepad

A. (i)-Image Editor, (ii)-CAD, (iii)-Text Editor, (iv)-Audio Editor

B. (i)-CAD, (ii)-Audio Editor, (iii)-Image Editor, (iv)-Text Editor

C. (i)-Audio Editor, (ii)-Image Editor, (iii)-CAD, (iv)-Text Editor

D. (i)-Text Editor, (ii)-Image Editor, (iii)-Audio Editor, (iv)-CAD

Ans: B

AutoCAD=CAD software, Audacity=Audio editor, GIMP=Image editor (open-source), Notepad=simple text editor.

Q128	Examples	Applications

Which application software helps students learn programming interactively?

A. Scratch (MIT) or Code.org

B. Tally ERP

C. Adobe Photoshop

D. Microsoft Excel

Ans: A

Scratch (by MIT) and Code.org are interactive educational platforms that teach programming concepts to students through visual coding.

Q129	Scenario	Applications

Scenario: A journalist wants to write and format a news article for publication. Which software is most appropriate?

A. AutoCAD

B. VLC Media Player

C. Microsoft Word or a similar word processor

D. Tally ERP 9

Ans: C

A word processor like Microsoft Word is ideal for writing, formatting, and proofreading text-based documents such as news articles.

DTP (Desktop Publishing) — 41 Questions

Q130	Definition	DTP

What does DTP stand for?

A. Data Transfer Protocol

B. Desktop Publishing

C. Digital Text Processing

D. Document Transfer Program

Ans: B DTP stands for Desktop Publishing — the process of creating professional-quality documents using a personal computer and specialized software.

Q131	Definition	DTP

Desktop Publishing is best defined as:

A. Sending electronic messages

B. Writing code for websites

C. Managing database records

D. Using software to design and produce professional print and digital publications

Ans: D DTP involves using computer software to combine text and graphics into professional layouts for print or digital distribution.

Q132	Examples	DTP

Which is a popular DTP software?

A. Tally

B. Microsoft Excel

C. Adobe InDesign

D. VLC Media Player

Ans: C Adobe InDesign is a leading DTP software. Others include QuarkXPress, Adobe PageMaker, Scribus, and Microsoft Publisher.

Q133	History	DTP

The first widely used DTP software was:

A. Microsoft Word

B. Adobe PageMaker

C. CorelDRAW

D. Adobe Photoshop

Ans: B Aldus PageMaker (1985), later acquired by Adobe, is credited as the first widely used desktop publishing application.

Q134	History	DTP

Desktop publishing emerged in the:

A. 2000s

B. Late 1990s

C. Mid-1980s

D. 1970s

Ans: C Desktop publishing emerged in the mid-1980s with the Apple Macintosh, laser printers, and software like PageMaker.

Q135	Applications	DTP

Which is an application of DTP?

A. Playing video games

B. Writing computer programs

C. Creating newspapers, magazines, brochures, and books

D. Sending emails

Ans: C DTP is used to produce professional printed and digital materials such as newspapers, magazines, brochures, flyers, books, and posters.

Q136	Features	DTP

The DTP feature where on-screen display matches final print output is called:

A. Batch processing

B. Real-time processing

C. WYSIWYG (What You See Is What You Get)

D. Time-sharing

Ans: C WYSIWYG (What You See Is What You Get) is a core DTP feature — the on-screen view accurately represents the final printed output.

Q137	Advantages	DTP

An advantage of DTP over traditional printing is:

A. Requires large printing presses

B. Cannot produce color output

C. Faster and cheaper production with professional quality

D. Requires specialized typesetting expertise

Ans: C DTP offers faster production, lower costs, easy editing and revision, and professional-quality output compared to traditional typesetting.

Q138	Concepts	DTP

In DTP, 'layout' refers to:

A. The programming code of the software

B. The arrangement of text and graphics on a page

C. The file format of the document

D. The printing mechanism used

Ans: B Layout in DTP is the visual arrangement of text, images, columns, headers, and other design elements to create a structured, professional page.

Q139	Characteristics	DTP

Which DTP characteristic allows combining text and images in one document?

A. Only images are supported

B. Requires separate software for text and images

C. Integration of text and graphics in a single document

D. Only text is supported

Ans: C

DTP software integrates text and graphics (photos, charts, illustrations) into a single document, enabling professional page layouts.

Q140	Concepts	DTP

'Typography' in DTP refers to:

A. The art of arranging typefaces and fonts for readability

B. Printing speed

C. Image resolution

D. File compression ratio

Ans: A

Typography is the art of selecting and arranging fonts, sizes, spacing, and styles to make text visually appealing and easy to read.

Q141	Features	DTP

Which DTP feature allows newspaper-style multiple columns of text?

A. Multi-column layout

B. Bold text formatting

C. Bullet point formatting

D. Auto page numbering

Ans: A

DTP software supports multi-column layouts enabling newspaper and magazine-style formatting with two or more text columns per page.

Q142	Features	DTP

A 'master page' in DTP is used to:

A. Import external images

B. Set the document's main color scheme

C. Create a template with repeating elements like headers, footers, and page numbers

D. Print multiple copies at once

Ans: C — A master page defines consistent repeating elements (headers, footers, page numbers, borders) applied automatically across all document pages.

Q143	Concepts	DTP

Image resolution in DTP is measured in:

A. Gigahertz (GHz)

B. Kilobytes (KB)

C. Megabytes (MB)

D. Dots Per Inch (DPI)

Ans: D — Image resolution in DTP is measured in DPI (Dots Per Inch). 300 DPI is the standard for professional-quality printing.

Q144	Concepts	DTP

The standard file format for final print-ready DTP documents is:

A. MP3

B. MP4

C. EXE

D. PDF (Portable Document Format)

Ans: D — PDF is the industry standard for print-ready documents as it preserves fonts, images, and layout perfectly across all systems.

Q145	History	DTP

Which printing technology made DTP practical in the 1980s?

A. Dot matrix printing

B. Laser printing

C. Thermal printing

D. Inkjet printing

Ans: B The laser printer, especially the Apple LaserWriter (1985), made desktop publishing practical by providing high-quality, affordable output.

Q146	Examples	DTP

Which is NOT a DTP software?

A. Adobe InDesign

B. Microsoft Publisher

C. MySQL

D. QuarkXPress

Ans: C MySQL is a database management system, not DTP software. InDesign, QuarkXPress, and Microsoft Publisher are all DTP applications.

Q147	Concepts	DTP

In DTP, 'bleed' refers to:

A. Ink running low in the printer

B. An oversized font

C. Artwork extending beyond the page edge to prevent white borders after trimming

D. Text overflow into another column

Ans: C Bleed is printing that extends beyond the trim edge of the page, ensuring no white borders appear after the page is cut to final size.

Q148	Uses	DTP

DTP is most useful for creating:

A. Computer programming code

B. Network configuration files

C. Brochures, flyers, newsletters, and magazines

D. Database queries

Ans: C DTP is specifically designed for creating visually rich publications such as brochures, newsletters, magazines, books, and posters.

Q149	Concepts	DTP

'Leading' in DTP typography refers to:

A. Space between columns

B. Space between pages

C. Vertical space between lines of text

D. Kerning between letters

Ans: C Leading (pronounced 'ledding') is the vertical space between lines of text — a key typography concept for readability in DTP.

Q150	Concepts	DTP

'Kerning' in DTP refers to:

A. Space between individual letter pairs

B. Space between paragraphs

C. Space between columns

D. Space between pages

Ans: A Kerning is the adjustment of space between individual letter pairs to improve the visual appearance and readability of text.

Q151	Concepts	DTP

DTP software supports which color model for professional printing?

A. HSB only

B. CMYK (Cyan, Magenta, Yellow, Black)

C. RGB only

D. Grayscale only

Ans: B DTP software supports CMYK color model — the standard for professional printing using Cyan, Magenta, Yellow, and Key (Black) inks.

Q152	Concepts	DTP

A 'gutter' in DTP page layout refers to:

A. A type of page border

B. A type of font

C. The inner margin between two facing pages in a spread

D. The outer edge of a page

Ans: C A gutter is the inner margin (binding side) between two facing pages in a spread, providing space for the binding of books and magazines.

Q153	Examples	DTP

Scribus is DTP software that is:

A. Free and open-source DTP software

B. Part of Microsoft Office

C. Only available for mobile devices

D. Expensive proprietary software

Ans: A Scribus is a free, open-source desktop publishing application available for Windows, macOS, and Linux.

Q154	Advantages	DTP

DTP allows easy editing before printing. This primarily saves:

A. Time and material costs by reducing the need for physical proofs

B. Electricity costs only

C. Only ink costs

D. Only paper costs

Ans: A — WYSIWYG preview allows designers to review and correct layouts on screen before printing, saving significant time and material costs.

Q155	Assertion-Reason	DTP

Assertion (A): DTP has replaced traditional typesetting in modern publishing.
Reason (R): DTP offers faster, more flexible, and cost-effective document production.

A. Both A and R are true, but R is NOT the correct explanation of A

B. A is true but R is false

C. Both A and R are true, and R is the correct explanation of A

D. A is false but R is true

Ans: C — DTP has largely replaced traditional typesetting due to its speed, flexibility, lower cost, and the ability to easily edit and revise layouts.

Q156	Scenario	DTP

Scenario: A school wants to publish its annual magazine. The most appropriate software is:

A. Spreadsheet software

B. Word processing software

C. Database software

D. DTP software

Ans: D — DTP software is ideal for publishing complex layouts combining text, images, and design elements — perfect for a school magazine.

Q157	Match-Following	DTP

Match DTP software with its developer:
(i) Adobe InDesign (ii) Microsoft Publisher (iii) QuarkXPress (iv) Scribus

A. (i)-Microsoft, (ii)-Adobe, (iii)-Open Source, (iv)-Quark Inc.

B. (i)-Adobe, (ii)-Microsoft, (iii)-Quark Inc., (iv)-Open Source

C. (i)-Open Source, (ii)-Quark Inc., (iii)-Adobe, (iv)-Microsoft

D. (i)-Quark Inc., (ii)-Adobe, (iii)-Microsoft, (iv)-Open Source

Ans: B

Adobe InDesign→Adobe, Publisher→Microsoft, QuarkXPress→Quark Inc., Scribus→free open-source community.

Q158	Features	DTP

Which DTP feature allows text to flow automatically from one text box to the next?

A. Manual text entry only

B. Only one text box per page

C. Text cannot flow between boxes

D. Threaded / linked text frames

Ans: D

Threaded (linked) text frames allow text to flow automatically across multiple frames and pages — essential for magazine and book layouts.

Q159	Applications	DTP

A newspaper, a book cover, and a wedding invitation are all examples of:

A. Spreadsheet software output

B. DTP software output

C. Media player output

D. Database software output

Ans: B

Newspapers, book covers, and wedding invitations are typical professional publications created using DTP software.

Q160	Concepts	DTP

Which DTP element controls the visual hierarchy of a document?

A. Printer brand

B. Number of pages

C. File size

D. Heading styles and font sizes

Ans: D Visual hierarchy in DTP is established through heading styles, font sizes, weight, and color to guide the reader's eye through the content.

Q161	Concepts	DTP

'White space' in DTP refers to:

A. Empty space around content that improves readability and visual balance

B. White-colored text boxes

C. Blank pages inserted between chapters

D. White paper used for printing

Ans: A White space (negative space) is the empty area around design elements. It improves readability, reduces clutter, and creates visual balance.

Q162	Examples	DTP

Which DTP software is included in Microsoft Office?

A. Adobe InDesign

B. QuarkXPress

C. Microsoft Publisher

D. Scribus

Ans: C Microsoft Publisher is a DTP application included in some Microsoft Office suites, used for creating flyers, brochures, and newsletters.

Q163	Concepts	DTP

In DTP, 'font' refers to:

A. The color of the page background

B. The paper size used for printing

C. The number of columns on a page

D. A specific typeface design used for text

Ans: D A font is a specific typeface design (e.g., Arial, Times New Roman) used for displaying or printing text in a document.

Q164	Concepts	DTP

A 'serif' font is a font that:

A. Is used only for headings

B. Has small decorative strokes (serifs) at the ends of letters

C. Is used only for digital screens

D. Has no decorative strokes at letter ends

Ans: B Serif fonts (e.g., Times New Roman, Georgia) have small decorative strokes at the ends of letters, traditionally used in printed books.

Q165	Concepts	DTP

A 'sans-serif' font is a font that:

A. Has decorative strokes at letter ends

B. Has clean letter forms without decorative strokes

C. Is used only for body text

D. Is used only in newspapers

Ans: B Sans-serif fonts (e.g., Arial, Helvetica) have clean, modern letter forms without decorative strokes — common in digital media.

Q166	Applications	DTP

DTP is used extensively in:

A. Publishing, advertising, marketing, and education sectors

B. Database administration

C. Network configuration

D. Scientific laboratory research

Ans: A DTP is widely used across publishing, advertising, marketing, education, and media industries to create professional visual materials.

Q167	Features	DTP

Which DTP feature helps maintain consistent margins and alignment across all pages?

A. Auto-spell check

B. Grid and ruler guides

C. Page numbering

D. Random margin tool

Ans: B Grid and ruler guides in DTP software help designers maintain consistent margins, alignment, and spacing across all document pages.

Q168	Scenario	DTP

Scenario: A company wants to create 1000 copies of a product brochure with photos and text. Which process should they use?

A. Use a word processor only

B. Send emails

C. Use a spreadsheet

D. Use DTP software to design, then send to professional printer

Ans: D DTP software is used to design the professional layout, which is then exported as print-ready PDF and sent to a commercial printer for mass printing.

Q169	Uses	DTP

Which of the following is a use of DTP in education?

A. Managing student fees

B. Managing examination databases

C. Creating textbooks, worksheets, and educational posters

D. Writing computer programs

Ans: C DTP is used in education to design and produce textbooks, worksheets, certificates, educational posters, and school newsletters.

Q170	Assertion-Reason	DTP

Assertion (A): Higher DPI means better print quality in DTP.
Reason (R): More dots per inch means finer detail and sharper images in print.

A. A is false but R is true

B. A is true but R is false

C. Both A and R are true, but R is NOT the correct explanation of A

D. Both A and R are true, and R is the correct explanation of A

Ans: D Higher DPI means more ink dots per inch, resulting in finer detail, smoother gradients, and sharper, more professional printed images.

E-Mail — 43 Questions

Q171	Definition	E-Mail

What does E-Mail stand for?

A. Extended Mail

B. External Mail

C. Electronic Mail

D. Electrical Mail

Ans: C — E-Mail stands for Electronic Mail — a system for sending and receiving digital messages over a computer network or the Internet.

Q172	History	E-Mail

Who is credited with inventing email?

A. Vint Cerf

B. Bill Gates

C. Ray Tomlinson

D. Tim Berners-Lee

Ans: C — Ray Tomlinson invented email in 1971. He also introduced the @ symbol to separate the username from the host computer name.

Q173	Components	E-Mail

Which symbol separates the username from the domain in an email address?

A. #

B. !

C. &

D. @

Ans: D — The @ (at) symbol separates the username (local part) from the domain name in an email address, e.g., user@example.com.

Q174	Components	E-Mail

In 'student@school.edu', the username is:

A. school.edu

B. edu

C. student

D. @

Ans: C The username is the part before the @ symbol. Here 'student' is the username identifying the specific mail account.

Q175	Components	E-Mail

In 'student@school.edu', the domain name is:

A. school.edu

B. student

C. edu

D. @

Ans: A The domain name is everything after the @ symbol. Here 'school.edu' represents the mail server address.

Q176	Features	E-Mail

'CC' in email stands for:

A. Confidential Copy

B. Complete Copy

C. Computer Copy

D. Carbon Copy

Ans: D CC stands for Carbon Copy. It sends a visible copy of the email to additional recipients beyond those in the primary To field.

Q177	Features	E-Mail

'BCC' in email stands for:

A. Basic Carbon Copy

B. Binary Carbon Copy

C. Broadcast Carbon Copy

D. Blind Carbon Copy

Ans: D BCC stands for Blind Carbon Copy. BCC recipients receive the email but their addresses are hidden from all other recipients.

Q178	Comparison	E-Mail

The key difference between CC and BCC is:

A. CC is for important emails; BCC is for spam

B. There is no difference between them

C. CC recipients are visible to all; BCC recipients are hidden from others

D. BCC recipients can reply-all; CC cannot

Ans: C CC shows all recipient addresses to everyone, while BCC hides BCC recipients' identities from all other recipients.

Q179	Features	E-Mail

The 'Inbox' folder contains:

A. Unsent draft emails

B. Emails you have sent

C. Deleted emails

D. Received incoming emails

Ans: D The Inbox is the primary folder where all received emails are delivered by default.

Q180	Features	E-Mail

The 'Sent Items' folder contains:

A. Received emails

B. Successfully sent emails

C. Spam emails

D. Draft emails

Ans: B The Sent folder stores copies of all emails you have successfully sent to recipients.

Q181	Features	E-Mail

Which folder stores composed but not yet sent emails?

A. Drafts

B. Sent Items

C. Trash

D. Inbox

Ans: A The Drafts folder stores email messages that have been composed and saved but not yet transmitted to recipients.

Q182	Concepts	E-Mail

Spam email refers to:

A. Important official correspondence

B. Encrypted secure emails

C. Unsolicited bulk emails sent without recipient consent

D. Emails with large file attachments

Ans: C Spam is unsolicited bulk email (junk mail) typically sent for commercial or phishing purposes without the recipient's permission.

Q183	Features	E-Mail

An email 'attachment' is:

A. The email subject line

B. The email signature block

C. The recipient list

D. A file sent along with the email message

Ans: D An email attachment is a file (document, image, audio, video, etc.) attached to and sent along with an email message.

Q184	Components	E-Mail

The 'Subject' field in an email:

A. Lists all recipients

B. Contains the full body text

C. Contains the sender's address

D. Briefly describes the topic or purpose of the email

Ans: D The Subject field provides a brief description of the email's topic, helping recipients understand its content before opening.

Q185	Concepts	E-Mail

Which protocol is used to send emails?

A. SMTP

B. HTTP

C. FTP

D. POP3

Ans: A SMTP (Simple Mail Transfer Protocol) is the standard protocol used to send email messages from a client to a mail server.

Q186	Concepts	E-Mail

Which protocol retrieves emails from a mail server?

A. FTP

B. SMTP

C. HTTP

D. POP3 / IMAP

Ans: D POP3 (Post Office Protocol 3) and IMAP (Internet Message Access Protocol) retrieve email messages from a mail server to a client.

Q187	Examples	E-Mail

Which is a free web-based email service?

A. Adobe Photoshop

B. Microsoft Word

C. Gmail

D. VLC Media Player

Ans: C Gmail is a free web-based email service by Google. Others include Yahoo Mail, Outlook.com, and Hotmail.

Q188	Advantages	E-Mail

An advantage of email over traditional postal mail is:

A. Requires physical postage

B. Instant global delivery at near-zero cost

C. Can only carry text

D. Slower delivery times

Ans: B Email delivers messages instantly worldwide at virtually no cost and can include file attachments of various types.

Q189	Features	E-Mail

Email can be accessed through:

A. Only a desktop computer

B. Only a telephone

C. Only a fax machine

D. Web browser, desktop email client, or mobile app

Ans: D Email is accessible through webmail in browsers, dedicated email client software (Outlook, Thunderbird), or mobile apps on smartphones.

Q190	Security	E-Mail

Phishing email tries to:

A. Automatically organize your inbox

B. Deliver breaking news updates

C. Trick recipients into revealing personal or financial information

D. Block spam messages

Ans: C Phishing emails impersonate legitimate organizations to trick users into revealing passwords, credit card numbers, or personal data.

Q191	Features	E-Mail

The 'Reply All' feature:

A. Forwards the email to new contacts

B. Sends reply to all recipients in the To and CC fields

C. Sends reply only to the original sender

D. Deletes the email after replying

Ans: B Reply All sends the response to the original sender and all recipients in the To and CC fields of the original email.

Q192	Components	E-Mail

Which is NOT a component of an email address?

A. Postal/ZIP code

B. Domain name

C. Username

D. @ symbol

Ans: A — An email address consists of username + @ + domain name. Postal codes belong to physical mail, not email addresses.

Q193	Features	E-Mail

An email signature is:

A. A virus embedded in emails

B. An encryption security key

C. A block of text automatically appended to outgoing emails with sender details

D. A handwritten signature scanned into the email

Ans: C — An email signature is a block of contact information (name, title, phone) automatically added to the end of outgoing email messages.

Q194	Features	E-Mail

'Forward' in email means:

A. Reply to the original sender

B. Send the received email to a new recipient not in the original thread

C. Move email to drafts

D. Delete the email

Ans: B — Forwarding sends a received email message to a new recipient who was not part of the original email conversation.

Q195	Features	E-Mail

Email organizes messages into:

A. Folders or labels by category

B. Only chronological order

C. One large unsorted pile

D. Only alphabetical order

Ans: A Email clients organize messages into folders (Inbox, Sent, Drafts, Spam) or labels, allowing efficient sorting and management.

Q196	Comparison	E-Mail

IMAP vs POP3: which keeps email on the server and syncs across multiple devices?

A. IMAP

B. SMTP

C. POP3

D. HTTP

Ans: A IMAP keeps email on the server and syncs across multiple devices, unlike POP3 which downloads and removes email from the server.

Q197	Features	E-Mail

What is the 'Trash' or 'Deleted Items' folder?

A. Where deleted emails are temporarily stored before permanent removal

B. Where spam goes automatically

C. Where sent emails are stored

D. Where draft emails are saved

Ans: A The Trash folder temporarily holds deleted emails before they are permanently removed from the mail system.

Q198	Security	E-Mail

Which email security practice helps avoid phishing?

A. Reply to all unknown senders

B. Click all links in suspicious emails

C. Share your email password with trusted colleagues

D. Verify sender identity before clicking links or sharing information

Ans: D Verifying sender identity and never clicking suspicious links or sharing personal information via email prevents phishing attacks.

Q199	Advantages	E-Mail

An advantage of email for business communication is:

A. It can only be used within the same city

B. It requires no internet connection

C. It creates a written record and is globally instant and cost-effective

D. It is always less secure than phone calls

Ans: C Email creates documented records, delivers instantly worldwide, supports file attachments, and is extremely cost-effective for business.

Q200	Assertion-Reason	E-Mail

Assertion (A): BCC protects recipient privacy in bulk emails.
Reason (R): BCC hides each recipient's address from all other recipients.

A. Both A and R are true, but R is NOT the correct explanation of A

B. A is true but R is false

C. A is false but R is true

D. Both A and R are true, and R is the correct explanation of A

Ans: D BCC is ideal for mass emails — it protects recipient privacy by hiding addresses from each other in the email thread.

Q201	Scenario	E-Mail

Mohan wants to email his resume to an employer. Which feature should he use to include the file?

A. Attachment

B. CC

C. BCC

D. Subject line

Ans: A The Attachment feature allows Mohan to include his resume file along with the email message body.

Q202	Match-Following	E-Mail

Match email term with definition:
(i) To (ii) CC (iii) BCC (iv) Draft

A. (i)-Hidden copy, (ii)-Primary, (iii)-Visible copy, (iv)-Sent email

B. (i)-Unsent email, (ii)-Hidden copy, (iii)-Visible copy, (iv)-Primary

C. (i)-Primary recipient, (ii)-Visible copy, (iii)-Hidden copy, (iv)-Unsent saved email

D. (i)-Visible copy, (ii)-Hidden copy, (iii)-Draft, (iv)-Primary

Ans: C To=primary recipient, CC=visible copy to others, BCC=hidden copy recipient, Draft=composed but unsent email.

Q203	Concepts	E-Mail

Which of the following is an official email domain used by government?

A. @yahoo.com

B. @gmail.com

C. @hotmail.com

D. @gov.in or @nic.in (India government domains)

Ans: D In India, government officials use email domains like @gov.in or @nic.in (National Informatics Centre), distinguishing official from personal email.

Q204	Concepts	E-Mail

What is the maximum typical size limit for a single email attachment?

A. 500 KB

B. 25 MB (standard for most providers like Gmail)

C. 1 TB

D. 100 GB

Ans: B Most email providers (like Gmail) have an attachment size limit of around 25 MB per email to prevent server overload.

Q205	Features	E-Mail

Which feature allows automatic sorting of incoming emails?

A. BCC feature

B. Manual sorting only

C. CC feature

D. Email filters / rules

Ans: D Email filters (rules) automatically sort, label, forward, or delete incoming messages based on sender, subject, or keywords.

Q206	Concepts	E-Mail

'Mailing list' in email refers to:

A. A list of deleted emails

B. A group email address that sends messages to multiple subscribers simultaneously

C. A list of spam emails

D. A list of draft emails

Ans: B A mailing list is a group email address that allows sending a single message to all subscribers/members of the list simultaneously.

Q207	Security	E-Mail

Which of the following is an email security measure?

A. Clicking all links in emails

B. Disabling spam filter

C. Sharing passwords with colleagues

D. Using two-factor authentication (2FA) for email accounts

Ans: D Two-factor authentication (2FA) adds an extra security layer by requiring a second verification step beyond just the password.

Q208	Concepts	E-Mail

'Email thread' refers to:

A. A physical wire used for email

B. A chain of related email messages and replies on the same topic

C. A type of email attachment

D. An email filter rule

Ans: B An email thread is a conversation chain showing the original message and all subsequent replies organized together in one view.

Q209	Concepts	E-Mail

Which of the following best describes 'email etiquette'?

A. Sending the same email repeatedly

B. Using emojis in all business emails

C. Using as many capital letters as possible

D. Following professional and respectful guidelines when writing emails

Ans: D Email etiquette refers to professional standards for composing emails: clear subject, polite tone, proper grammar, appropriate CC/BCC use, and timely replies.

Q210	Scenario	E-Mail

Scenario: A teacher wants to send the same announcement to 50 students without revealing their email addresses to each other. Which feature should be used?

A. Forward feature

B. To field

C. CC field

D. BCC field

Ans: D BCC (Blind Carbon Copy) is ideal — it sends to all 50 students while keeping each student's email address hidden from the others.

Q211	Assertion-Reason	E-Mail

Assertion (A): Email has largely replaced traditional postal mail for business communication. Reason (R): Email is faster, cheaper, and creates a permanent digital record.

A. A is true but R is false

B. Both A and R are true, but R is NOT the correct explanation of A

C. A is false but R is true

D. Both A and R are true, and R is the correct explanation of A

Ans: D Email has replaced postal mail in business because it is instant, nearly free, can carry attachments, and creates a searchable digital record.

Q212	Components	E-Mail

Which of the following symbols is valid in an email address?

A. Exclamation (!)

B. Hash (#)

C. Period (.) in the username part

D. Space ( )

Ans: C A period (.) is a valid character in the username part of an email address (e.g., first.last@example.com). Spaces and most special symbols are not allowed.

Q213	Match-Following	E-Mail

Match the email protocol with its function:
(i) SMTP (ii) POP3 (iii) IMAP (iv) HTTPS

A. (i)-Sync email, (ii)-Secure web, (iii)-Send email, (iv)-Download email

B. (i)-Secure web, (ii)-Sync email, (iii)-Download email, (iv)-Send email

C. (i)-Download email, (ii)-Send email, (iii)-Secure web, (iv)-Sync email

D. (i)-Send email, (ii)-Download email to device, (iii)-Sync email across devices, (iv)-Secure web access

Ans: D

SMTP sends email, POP3 downloads email to device removing from server, IMAP syncs email across multiple devices, HTTPS secures web communication.

Internet — 55 Questions

Q214	Definition	Internet

What is the Internet?

A. A type of application software

B. A global network of interconnected computers and networks

C. A wireless technology for phones only

D. A single very large computer

Ans: B The Internet is a global system of interconnected computer networks using the TCP/IP protocol suite to communicate between billions of devices.

Q215	History	Internet

The Internet evolved from which early network?

A. NSFNET

B. ARPANET

C. CSNET

D. BITNET

Ans: B The Internet evolved from ARPANET (Advanced Research Projects Agency Network), developed in the late 1960s for military and academic research.

Q216	History	Internet

Who are credited as 'Fathers of the Internet'?

A. Tim Berners-Lee and Marc Andreessen

B. Bill Gates and Steve Jobs

C. Vint Cerf and Bob Kahn

D. Ray Tomlinson and Dennis Ritchie

Ans: C Vint Cerf and Bob Kahn developed TCP/IP — the foundational communication protocols on which the Internet operates.

Q217	Definition	Internet

WWW stands for:

A. World Wide Web

B. World Wide Wire

C. Wide World Web

D. Wireless World Web

Ans: A — WWW stands for World Wide Web — a system of interlinked hypertext documents and multimedia content accessed via the Internet.

Q218	History	Internet

Who invented the World Wide Web?

A. Vint Cerf

B. Tim Berners-Lee

C. Bill Gates

D. Mark Zuckerberg

Ans: B — Tim Berners-Lee invented the World Wide Web in 1989 at CERN, creating HTML, HTTP, and the first web browser.

Q219	Concepts	Internet

HTTP stands for:

A. High Technology Transfer Protocol

B. HyperText Translation Program

C. HyperText Transfer Protocol

D. Home Transfer Transmission Protocol

Ans: C — HTTP (HyperText Transfer Protocol) is the foundational protocol for data communication on the World Wide Web.

Q220	Concepts	Internet

HTTPS differs from HTTP because it:

A. Is always faster than HTTP

B. Works without an internet connection

C. Uses SSL/TLS encryption for secure communication

D. Is used only for email

Ans: C HTTPS (HTTP Secure) uses SSL/TLS encryption to protect data transmitted between browser and server, securing sensitive information.

Q221	Concepts	Internet

A URL (Uniform Resource Locator) is:

A. The address used to locate a specific resource on the Web

B. A type of computer virus

C. An internet service provider

D. A programming language

Ans: A A URL is the address used to locate specific resources on the internet. Example: https://www.example.com

Q222	Examples	Internet

Which is a web browser?

A. VLC Media Player

B. Adobe Photoshop

C. Google Chrome

D. Microsoft Word

Ans: C Google Chrome is a web browser for accessing the World Wide Web. Others include Firefox, Safari, Microsoft Edge, and Opera.

Q223	Concepts	Internet

An ISP (Internet Service Provider) is:

A. A company that provides internet access to users

B. A hardware component

C. A type of antivirus software

D. A web browser

Ans: A An ISP is a company that provides individuals and organizations with access to the Internet through broadband, fiber, or wireless connections.

Q224	Concepts	Internet

FTP stands for:

A. File Transfer Protocol

B. Fast Transfer Protocol

C. File Transmission Program

D. Folder Transfer Protocol

Ans: A FTP (File Transfer Protocol) is an Internet protocol used to transfer files between computers over a network.

Q225	Concepts	Internet

VoIP stands for:

A. Virtual over Internet Protocol

B. Volume over IP

C. Video over IP

D. Voice over Internet Protocol

Ans: D VoIP (Voice over Internet Protocol) enables voice calls and communication over the Internet instead of traditional telephone lines.

Q226	Uses	Internet

A primary use of the Internet is:

A. Online communication, research, and e-commerce

B. Defragmenting the hard disk

C. Installing hardware drivers

D. Increasing RAM capacity

Ans: A — The Internet enables communication, research, online shopping, banking, entertainment, and education on a global scale.

Q227	Concepts	Internet

Downloading refers to:

A. Creating new files on the internet

B. Sending files from your computer to the internet

C. Deleting files from a server

D. Transferring files from an internet server to your local computer

Ans: D — Downloading is transferring data (files, software, media) from a remote server or internet to your local computer.

Q228	Concepts	Internet

Uploading refers to:

A. Browsing websites

B. Transferring files from server to your computer

C. Sending files from your local computer to a server

D. Checking email

Ans: C — Uploading is sending data from your local computer to a remote server or the internet.

Q229	Limitations	Internet

A limitation of the Internet is:

A. Global communication capabilities

B. Access to unlimited digital resources

C. Privacy risks and cybersecurity threats

D. Fast access to global information

Ans: C Despite many benefits, the Internet poses risks including privacy breaches, cybercrime, data theft, and exposure to harmful content.

Q230	Concepts	Internet

Bandwidth refers to:

A. Number of web pages visited per hour

B. Storage capacity of the hard disk

C. The physical size of the network cable

D. The maximum data transfer rate of a network connection

Ans: D Bandwidth is the maximum rate at which data can be transmitted over a network connection, typically measured in Mbps or Gbps.

Q231	Services	Internet

A search engine is used to:

A. Find and index information on the World Wide Web

B. Transfer files via FTP

C. Send and receive emails

D. Create and host websites

Ans: A A search engine (like Google, Bing) indexes web content and allows users to find information using keyword searches.

Q232	Examples	Internet

Which is a popular search engine?

A. Adobe Flash

B. Internet Explorer

C. Microsoft Office

D. Google

Ans: D Google is the world's most widely used search engine. Others include Bing, Yahoo Search, DuckDuckGo, and Baidu.

Q233	Concepts	Internet

The domain extension '.edu' is used by:

A. Non-profit organizations

B. Commercial companies

C. Government organizations

D. Educational institutions

Ans: D The .edu TLD (Top-Level Domain) is reserved for educational institutions, primarily colleges and universities.

Q234	Concepts	Internet

The domain extension '.gov' is used by:

A. Educational institutions

B. Commercial companies

C. Government organizations

D. International organizations

Ans: C The .gov TLD is reserved for official government organizations and agencies.

Q235	Concepts	Internet

The domain extension '.com' is used by:

A. Commercial / business organizations

B. Military organizations

C. Educational institutions

D. Government bodies

Ans: A The .com TLD is the most widely used generic TLD, originally for commercial organizations and now used globally.

Q236	Services	Internet

Which is NOT an Internet service?

A. RAM upgrade

B. Email

C. VoIP

D. FTP

Ans: A RAM upgrade is a hardware operation, not an Internet service. Email, FTP, and VoIP are all Internet-based services.

Q237	Services	Internet

Video conferencing over the Internet enables:

A. Improved antivirus scanning

B. Faster hard disk performance

C. Automatic software installation

D. Real-time face-to-face communication between users worldwide

Ans: D Video conferencing (Zoom, Google Meet, Teams) enables real-time audio and video communication between participants anywhere in the world.

Q238	Concepts	Internet

The Internet operates on which core protocol suite?

A. FTP

B. TCP/IP

C. HTTP

D. SMTP

Ans: B TCP/IP (Transmission Control Protocol/Internet Protocol) is the foundational protocol suite governing all data transmission on the Internet.

Q239	Services	Internet

Cloud computing over the Internet involves:

A. Storing and accessing data on remote servers via the Internet

B. Using Bluetooth for file transfer

C. Installing software from a CD

D. Storing data only on your local hard disk

Ans: A Cloud computing stores data and runs applications on remote Internet-based servers, accessible from anywhere on any Internet-connected device.

Q240	Concepts	Internet

An IP address is used to:

A. Uniquely identify a device on a network

B. Protect against viruses

C. Speed up internet connection

D. Name a website

Ans: A An IP (Internet Protocol) address is a unique numerical label assigned to each device on a network to enable communication.

Q241	Concepts	Internet

IPv4 addresses consist of:

A. 4 groups of numbers separated by dots (e.g., 192.168.1.1)

B. 8 alphabetic characters

C. 16 binary digits only

D. 6 groups of hexadecimal numbers

Ans: A IPv4 addresses consist of four groups of numbers (0–255) separated by dots, e.g., 192.168.1.1.

Q242	Concepts	Internet

Web pages are written using:

A. SQL

B. HTML (HyperText Markup Language)

C. C programming language

D. Assembly language

Ans: B Web pages are created using HTML (HyperText Markup Language), the standard markup language for documents displayed in web browsers.

Q243	Uses	Internet

Online banking is an Internet service that enables:

A. Financial transactions like fund transfers and bill payments

B. Playing online games

C. Entertainment only

D. Creating websites

Ans: A Online banking allows users to perform financial transactions (check balances, transfer funds, pay bills) securely via the Internet.

Q244	Features	Internet

The Internet is available:

A. Only during office hours

B. 24 hours a day, 7 days a week globally

C. Only on weekdays

D. Only in urban areas

Ans: B The Internet is a 24/7 global service — continuously available, allowing users to access information and services at any time, from anywhere.

Q245	Assertion-Reason	Internet

Assertion (A): The Internet has transformed education globally.
Reason (R): It provides access to online courses, e-books, research papers, and educational videos worldwide.

A. Both A and R are true, and R is the correct explanation of A

B. Both A and R are true, but R is NOT the correct explanation of A

C. A is true but R is false

D. A is false but R is true

Ans: A The Internet has revolutionized education by making vast learning resources globally accessible through e-learning and digital libraries.

Q246	Scenario	Internet

Sunita wants to buy a book from home without visiting a store. Which Internet service enables this?

A. VoIP

B. E-Commerce / Online Shopping

C. Email

D. FTP

Ans: B E-Commerce (electronic commerce) enables buying and selling of goods and services over the Internet from the convenience of home.

Q247	Match-Following	Internet

Match the Internet term:
(i) WWW (ii) URL (iii) HTTP (iv) ISP

A. (i)-Web address, (ii)-Web protocol, (iii)-Internet provider, (iv)-Web system

B. (i)-Web protocol, (ii)-Internet provider, (iii)-Web system, (iv)-Web address

C. (i)-World Wide Web, (ii)-Web address, (iii)-Web protocol, (iv)-Internet provider

D. (i)-Internet provider, (ii)-Web system, (iii)-Web address, (iv)-Web protocol

Ans: C WWW=World Wide Web, URL=web resource address, HTTP=web transfer protocol, ISP=Internet Service Provider.

Q248	Concepts	Internet

A hyperlink on a web page is:

A. A type of computer virus

B. A clickable element linking to another web page or resource

C. An internet protocol

D. A programming language

Ans: B A hyperlink is a clickable reference in a web page that takes the user to another web page, file, or internet resource when clicked.

Q249	Services	Internet

Instant Messaging (IM) allows:

A. Only email communication

B. Real-time text and multimedia communication over the Internet

C. Only voice calls

D. Only file transfers

Ans: B Instant Messaging allows real-time text (and often video/audio) communication between users over the Internet.

Q250	Concepts	Internet

The '.org' domain extension is typically used by:

A. Commercial companies

B. Non-profit organizations and NGOs

C. Government agencies

D. Educational institutions

Ans: B The .org TLD is traditionally used by non-profit organizations, NGOs, open-source projects, and communities.

Q251	Uses	Internet

E-learning is an Internet application used for:

A. Video gaming

B. Banking

C. Online education and training

D. Online shopping

Ans: C E-learning uses the Internet to deliver educational content, courses, and training to learners anywhere in the world.

Q252	Features	Internet

Which Internet feature allows multiple users to collaborate on a document simultaneously?

A. FTP file transfer

B. Offline document editing only

C. POP3 email retrieval

D. Real-time collaboration tools like Google Docs

Ans: D Real-time collaboration tools (Google Docs, Office 365) allow multiple users to view and edit the same document simultaneously via the Internet.

Q253	Advantages	Internet

The advantage of the Internet for global communication is:

A. Requires physical mail for attachments

B. Enables instant, low-cost communication with anyone worldwide

C. Requires expensive infrastructure for every message

D. Works only within a single country

Ans: B

The Internet enables instant, nearly free communication with anyone globally through email, messaging, video calls, and other platforms.

Q254	Concepts	Internet

The '.in' domain extension represents which country?

A. India

B. Italy

C. Indonesia

D. Iran

Ans: A

The .in is the country-code TLD (ccTLD) for India, used by Indian websites, organizations, and government portals.

Q255	Services	Internet

Which Internet service allows publishing personal journals and articles online?

A. Email

B. FTP

C. Blog (Web Log)

D. VoIP

Ans: A

A blog (web log) is a type of website or online journal where individuals or organizations regularly publish articles, opinions, and updates.

Q256	Uses	Internet

Social networking sites like Facebook use the Internet to:

A. Defragment hard disks

B. Install antivirus updates

C. Connect people globally to share content, messages, and updates

D. Replace all telephone services

Ans: C Social networking platforms use the Internet to connect people worldwide, enabling sharing of text, photos, videos, and real-time communication.

Q257	Uses	Internet

Online streaming services like YouTube use the Internet for:

A. Storing physical DVDs

B. Delivering audio and video content on demand over the Internet

C. Defragmenting hard disks

D. Printing documents

Ans: B Online streaming services deliver audio/video content on demand via the Internet, eliminating the need for physical media.

Q258	Concepts	Internet

Which Internet concept allows a website to remember your login between sessions?

A. VoIP protocol

B. FTP connection

C. Cookies stored in the browser

D. IP address

Ans: C Browser cookies are small data files stored on your device that remember login sessions, preferences, and browsing history across visits.

Q259	Concepts	Internet

'Broadband' internet refers to:

A. High-speed internet with wide bandwidth for fast data transfer

B. An internet connection that only works on mobile

C. An internet service that only allows email

D. A slow dial-up connection

Ans: A Broadband is a high-speed internet connection technology (DSL, fiber, cable, satellite) providing much faster speeds than dial-up.

Q260	Concepts	Internet

Wi-Fi allows devices to:

A. Only print documents wirelessly

B. Only transfer files via Bluetooth

C. Connect to the internet only via cables

D. Connect wirelessly to a local network and the internet

Ans: D Wi-Fi allows devices to connect wirelessly to a local network router, which provides internet access without physical cables.

Q261	Limitations	Internet

Which of the following is a cybersecurity threat on the Internet?

A. Improved video streaming quality

B. Better search results

C. Phishing, hacking, and identity theft

D. Faster download speeds

Ans: C Cybersecurity threats on the Internet include phishing attacks, hacking, identity theft, ransomware, and unauthorized data access.

Q262	Match-Following	Internet

Match Internet domain extension with its user type:
(i) .com (ii) .edu (iii) .gov (iv) .org

A. (i)-Educational, (ii)-Commercial, (iii)-Non-profit, (iv)-Government

B. (i)-Commercial, (ii)-Educational, (iii)-Government, (iv)-Non-profit

C. (i)-Government, (ii)-Non-profit, (iii)-Commercial, (iv)-Educational

D. (i)-Non-profit, (ii)-Government, (iii)-Educational, (iv)-Commercial

Ans: B .com=Commercial, .edu=Educational institutions, .gov=Government agencies, .org=Non-profit organizations.

Q263	Assertion-Reason	Internet

Assertion (A): The Internet requires TCP/IP to function.
Reason (R): TCP/IP is the fundamental communication protocol suite of the Internet.

A. A is true but R is false

B. Both A and R are true, and R is the correct explanation of A

C. A is false but R is true

D. Both A and R are true, but R is NOT the correct explanation of A

Ans: B TCP/IP is the foundational protocol suite that enables all Internet communication. Without it, devices cannot exchange data on the Internet.

Q264	Services	Internet

Which Internet service is used to transfer files between computers using commands?

A. Email

B. HTTP

C. FTP (File Transfer Protocol)

D. VoIP

Ans: C FTP (File Transfer Protocol) is an Internet service specifically designed to transfer files between computers on a network.

Q265	Uses	Internet

The Internet supports 'e-governance' which means:

A. Electronic voting machines

B. Government services delivered to citizens via the internet

C. Internet service for government employees only

D. Electronic gaming over the internet

Ans: B E-governance uses the Internet to deliver government services, information, and transactions to citizens efficiently and transparently.

Q266	Scenario	Internet

Scenario: A student in a rural area wants to attend classes from a city school without traveling. Which Internet service helps?

A. Online video conferencing and e-learning platforms

B. Email only

C. Internet banking

D. FTP file transfer

Ans: A Video conferencing and e-learning platforms allow students anywhere to attend virtual classes, bridging geographic barriers through the Internet.

Q267	Concepts	Internet

Which Internet feature ensures that data reaches its destination intact and in order?

A. DNS system

B. URL system

C. HTTP protocol

D. TCP (Transmission Control Protocol)

Ans: D TCP (Transmission Control Protocol) ensures reliable data delivery — it breaks data into packets, ensures they arrive correctly, and reassembles them.

Q268	Concepts	Internet

DNS (Domain Name System) converts:

A. Email addresses to URLs

B. HTML to PDF

C. Domain names (like www.example.com) to IP addresses

D. IP addresses to physical addresses

Ans: C

DNS (Domain Name System) translates human-readable domain names (e.g., www.google.com) into numerical IP addresses that computers use to connect.
